

PART I: PROJECT/PROGRAMME INFORMATION

PROJECT/PROGRAMME PROPOSAL TO THE ADAPTATION FUND

Project/Programme Category: Regular Project

Country: United Republic of Tanzania

Title of Project Karatu Climate Resilience and Adaptation project for

Hadzabe and Datoga communities- KARAHADA

Type of Implementing Entity: National Implementing Entity

Implementing Entity: National Environmental Management Council (NEMC)

Executing Entity: Hakikazi Catalyst & Karatu District Council

Amount of Financing Requested: 2,500,000 (in U.S Dollars Equivalent)

Project / Programme Background and Context:

Brief information on the problem the proposed project is aiming to solve. Outline the economic social, development and environmental context in which the project would operate.

1.1 Brief background on what the project aims to solve

The proposed project intends to address the climate change-induced impacts due to water scarcity and drought affecting the gatherers and hunters as vulnerable communities found along salty Eyasi Lake catchment in northern part of Tanzania. These vulnerable communities are already experiencing climate change impacts as a result of water scarcity; as the major driver of vulnerability. The water scarcity causes drought which severely affect availability and sustainability of wild animals, plant roots, and wild fruits. The insufficient numbers of wild animals and fruits which serve as the staple food results into famine to the hunters and gatherers². Some vulnerable communities have transformed and are now involved in crop production and livestock keeping. Most of the Hadzabe are hunters and gatherers who tend to move in search of water and food. On the other hand the Datoga who are engaged in blacksmith do not farm or keep livestock except for few chickens which are kept by women. Therefore The Hadzabe (hunters and gatherers) are faced with limited options for their livelihoods and adaptation to impacts of climate change.

The gatherers and hunters depend on the Mang'ola River and shallow wells of which some have salty waters for their survival. Mang'ola River banks have been encroached with cultivation of major cash crops namely onion and maize which provide significant incomes for other communities. These crops use heavy pesticides of which some pollute the Mang'ola River. Present and future climate-change impacts are projected to accelerate multiple challenges across the district, affecting nearly all of the population. These impacts are expected to include profound decrease in water availability, temperature stresses to human, wildlife, livestock and crops, changes in farming practices, incomes and food security, ecological disruption, and human health related impacts such as introduction of new and changes of disease vectors.

1.1.1. Climate change Context

Climate change is one of the challenges to economic growth and poverty eradication in most developing countries. It affects all countries in all parts of the world but the impacts are differently distributed amongst regions, generations, age classes, income groups and occupations. The adverse impacts of climate change such as droughts and floods are already evident in almost all sectors of the economy in the country leading to major economic costs, loss of life, properties and other human capitalⁱ.

Climate change trends and future scenarios

There is documented evidence that the climate is changing in Tanzania and elsewhere in world. There is an increase in frequency and intensity of extreme events such as heavy

rainfall, strong winds, hailstorms, and high temperatures. Between 1981 and 2020 there have been severe incidences of flooding, drought and record breaking rainfall that have been observed in many parts of our country. According to IPCC reports most of these extreme events have been observed in the last five years (2015, 2016, 2017, 2018 and 2019). This proposal will also a look at rainfall projections and anomalies and temperature projections and anomalies.

Rainfall projections and anomalies

Rainfall projections indicates that some parts of the country may experience an increase in the mean annual rainfall of up to 28% by 2100ⁱⁱ Projections by Future climate for Africa (2017) indicates that rainfall will decrease during dry season and will increase during wet seasons giving rise to higher drought and flood risks. The north western region around Lake Victoria is projected to observe a higher amount of rainfall by 2030. By 2090 these changes can reach up to 10% of current annual rainfall averagesⁱⁱ. Rainfall distribution in Tanzania is characterized by bimodal patterns with peak in October – December. These rains are called "Vuli" and March to May rains which are called "Masika". Vuli and masika rains are more typica throughout the country for the months of October to December, January to March and April to June. Observations by TMA show that from for 2016-2017 most parts of the country recorded low rainfall in the same months. Observations from TMA show that Karatu district annual rainfall has been increasing over time.

Table 1: Annual Rainfall (mm) by Stations, 2012 – 2018

Source: Tanzania Meteorological Agency (TMA)

In 2016-2018 the same months recorded relatively high rainfall. In 2019 rainfall variations reflected different trends and patterns during the same months. These changes in rainfall trend and pattern have significant impacts on the availability of food and water for vulnerable communities in Karatu District.

Temperature projections and anomalies

Global climate models predict warming in the range of 0.8 to 1.8°C by the year 2040.More warming is projected over the western side of the country. A warming of less than 1.76°C for 2050 and 3.2 8°C for 2100 is projected over parts of the northern coast regions and north east highlands. Studies have shown trends of increased temperature over the entire country. In 2019 the annual mean temperature was 23.8°C, which is 0.9°C warmer than long term average (1981-2010).Temperatures in Tanzania are usually characterized by relatively less fluctuations throughout the year. Changes in temperature may have consequences on human, wildlife and livestock lives. Communities that depend on these sectors may face adaptation risks which need measures for building resilience. Table 2 and 3 shows Monthly minimum and maximum temperatures from 2012 -2018.I

Source: Tanzania Meteorological Agency (TMA)

These monthly mean maximum and minimum temperatures shows that communities can continue to undertake livelihood activities without much impact of temperature changes. Therefore, this project proposes to develop and implement concrete adaptation actions at grass root levels to increase community resilience to climate change impacts and it will align with the following sectors; water resources and supply, forestry and bee keeping, livestock production, tourism, and gender in relation to climate change. The project will apply transformative integrated environmental management, resilient rural water supply systems and climate smart agriculture practices to reduce vulnerabilities. The project will be implemented in eight selected villages in the three wards Baray, Endamaghan and Mang'ola. This approach offers practical and effective combination of Community-Based-Adaption and Nature -Based-Adaptation techniques to support transformation of livelihood system, combat poverty, enhance greater climate resilience of rural communities and gender equality while reducing emissions through long-term storage of carbon in landscapes. The resources sought from the Adaptation Fund (AF) will implement concrete and practical cost effective and multi-stakeholder's adaptation solution to improve livelihoods of the poor and vulnerable communities in the district through the following five out comes:

- i) Increased food security, income and resilience to climate change impact through Climate Smart practices in selected villages in the three wards of Baray, Endamaghan and Mang'ola
- ii) Enhanced climate resilient rural water supply system in vulnerable communities of Hadzabe (gathers and hunters) and Datoga (Blacksmith) in selected villages in the three wards of Baray, Endamaghan and Mang'ola
- iii) Improved forests services and functions to sustain climate change resilient livelihoods in selected villages in the three wards of Baray, Endamaghan and Mang'ola
- iv) Improved Health and sanitation infrastructure and services for Hadzabe (hunters and gatherers) and Datoga (blacksmith) in selected villages of the three wards of Baray, Endamaghanand Mang'ola
- v) Improved capacity of Karatu District Council and Hadzabe (hunters and gatherers) and Datoga (Blacksmith) communities in planning, implementing and monitoring climate adaption actions

1.2 Socio-economic, development and environmental context

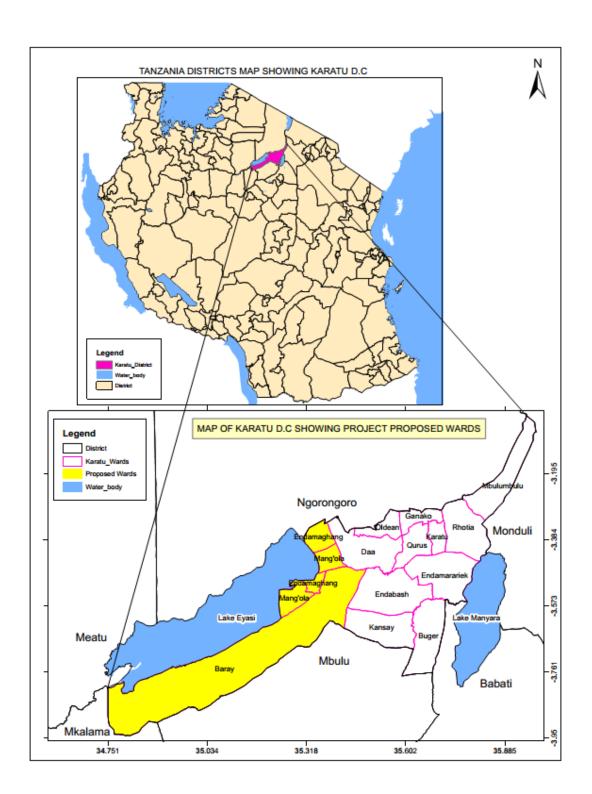

1.2.1 Location and Topography

Karatu district is located South of the Equator between Latitudes3°10'4°00'S and Longitudes 34°47'E-35°56'E. The district is bordered by Mbulu District to the South, Iramba and Meatu Districts to the North West, Ngorongoro to the North and Monduli and Babati Districts to the South East. Karatu District is estimated to have an area of approximately 3,300 square kilometres, with Lake Eyasi occupying about 10.6 square kilometres. Administratively, the Karatu District is divided into four divisions namely Mbulumbulu, Eyasi, Karatu and

Endabash. There are 14 wards, 49 registered villages.

The hunters and gatherers are mostly found in Baray, Endamaghan and Mang'ola wards. Karatu district has natural vegetation which is situated in Rift valley Highland zones, is known as bushed and wooded grasslands. This enables the district to practice farming systems of Maize, Wheat, coffee barley legumes, dairy and traditional livestock. Figure ... shows the map of Tanzania and the project sites.

Figure 1: Map of Tanzania showing project location

1.2.2 Socio-economic and development context

Karatu district is currently having a population of 233,691 of which 117,769 being males and 112,397 females and 48,345 households as per 2012 Census¹. The District birth rate stands at 3.1%. The average population density is 73.4 persons/km² with low densities in the western zone along Lake Eyasi (7-10 person/km²) and higher densities (100 persons/km²) in Karatu and Mbulumbulu Division. The District is mostly populated by "Iraqw tribe" being the dominant, the Barbaigs(Datoga) being the minor tribe who are pastoralists and Hadzabe who are hunters and gatherers. It is believed that in the long run, Karatu Township will be the second largest tourist town after Arusha city on the Northern circuit. The District has three main ethnic groups namely: "Iraqw, Hadzabe, Datonga and barbaigs. The Iraqw is the largest community, estimated 65 % of population which occupy most of highland areas and practice mixed farming which involve cultivation, herding cattle and maintain home gardens and trees. However, there are other ethnic groups found in the district. These are Maasai, Mangati, Chaga and Warangi.

Urban-Rural differentiations are manifested in Karatu District for the year 2002 to year 2012³. The urbanization has increased from 5.3% in year 2002 to 6.4% in year 2012. This change indicates small movement of people especially hunters and gatherers whose livelihood depends much on natural bushes and forests found in Rift Valley near Lake Eyasi. The district per capita income is estimated to be TSh. 800,000/= per annum³. Other important indicators of development are as follow; literacy rate is 64, population growth rate 3.1, dependency ratio 97, employment in agriculture 61%, livestock keeping 7.49%, office 3.14%, elementary occupation 21.33%, plant operations/assemble 0.37%, Business operation 5%, hand hoes as owned by most people is 79%, while sex ratio is 108, energy consumption (electricity) is 4% and firewood is 96%.

The rural areas of Karatu District require water both for human consumption for livestock, wildlife and possibly irrigation. The majority of the rural population still rely on unprotected water sources mainly earth dams, charcoal dams—and water holes in swampy areas. In the execution of rural water schemes, the District strategy is to mobilize village communities in the construction of such schemes. Thereafter, involve them in the management, maintenance and operating of these schemes through their water user committees and funds financed by user fees. Availability of infrastructure such as accommodation facilities, telecommunication services, roads, banks and tours operators is an important tool for the development of competitive tourism industry. Accommodation facilities are important in attracting tourists. Therefore, information about hotels, camp sites and lodges is vital for tourists, as it assist them to choose the type of accommodation they like as well as value for money. The Karatu District had at least15 campsites by the year 2008. Some Hadzabe and Datoga communities are also involved in tourism.

The district is also promoting eco-tourism in form of campsites especially in areas inhabited by the Hadzabe hunters and gatherers and Datoga (blacksmith). Eco-tourism is therefore a good source of employment and income for Karatu District. Another boost to the tourism sector is that the district lies in the main wildlife corridor between Ngorongoro and Marang Forest to Lake Manyara to the South (in the Mbulu District). The location of Karatu town along the road to Ngorongoro crater, serves by many tourist hotels and

lodges. Likewise, There is heavy traffic of tourist through the north -east, route to Manyara National park, Ngorongoro conservation area and Serengeti National Park. There are economic benefits to district from taxes as well as revenue from sales to visitors. Eco tourism includes walking safaris, watching safaris, specialized bird watching safaris, observing wildlife in its natural habitat and meeting local peoples without interfering with their lifestyles. There are already eco-tours operated in Hadzabe areas. The clients go mainly to the Mang'ola area for walking safaris. Tourists walk with Hadzabe to learn about traditional practices and to see wildlife. Other walking safaris come from the Ngorongoro Conservation Area to Mang'ola.T our vehicles also come from Karatu to Mang'ola where particular villages offer camping sites for small fees. There is potential for bird watching near Lake Eyasi westlands..

1.2.3 Environmental context

Karatu district has reserved area of about 35,399 hectares. On reforestation, efforts are being made by District institutions, such as individuals, Council, CBOs, NGOs to address environmental degradation. There are six tree nurseries which involve with supporting, production and planting of seedlings for afforestation projects in eight wards namely Baray ,Ganako , Qurus and Kansay, Oldeani and Rhotia.All non- protected forests are used for grazing. Particularly in the Western zone, many goats and sheep are reared taking advantage of salts found in the areas near Lake Eyas, resulting in high pressure on shrubs

The forestry sector is of importance to residents of Karatu District primarily because it supplies their needs for domestic fuel. It is estimated that 95% of residents depend on fuel wood for their domestic energy needs. Charcoal is rarely used by rural people; it is mostly produced for sale³. Most Charcoal produced in the in the western zone goes to the towns of Karatu, Oldeani, Mto wa Umbu and the Ngorongoro conservation area. Tree species for charcoal are Acacia and Combretum species from natural woodlands, and those planted in woodlots and public lands (E.g Acacia mearnsii,the wattle trees). Charcoal is not an efficient use of the wood as it estimated that about 80% of the heat value of wood is lost in making charcoal.

The forest resources of Western zone are unique in terms of their diversity of plants and shrubs. These resources are used by the Hadzabe for food. The baobab is the most important tree, providing staple foods. There are many natural fruiting shrubs. Among the important tuber crops are Vigna esculenta, Coccinea aurantica, and ipomoea transvalensis. These tuber crops are crucial components for survival of the Hadzabe. One hectare of Vigna esculenta can support one family for about 148 days. Most shrubs and trees can provide useful medicine for both human and livestock.

Beekeeping in Karatu District is carried out mainly traditionally. Some tribesmen like Tindiga and Hadzabe, live on honey, hunting and tree roots. To them honey is a staple food. Also Honey is used in making of local brew, in preparation of medicines, and is significant in traditional ceremonies and rituals, as well as in conflict resolution as a mediation symbol. There is a big potential for increased production of honey and bees wax by both traditional and modern beekeeping techniques. Beekeeping is permitted

upon request in the forest reserves. So far, the little production of honey has been for local use, while there is room for producing more for export.

Project Objectives:

This project aims to implement activities that are directed towards enabling climate resilient livelihood in climate change affected areas. The project will implement activities that will build capacity of Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities in undertaking practical and innovative smart solutions that have concrete and tangible outputs. This project will specifically envisage achieving the following:

- (i) To Enhance integrated climate change resilient livelihood diversification system in the selected sites in three wards of Baray, Endamaghan and Mang'ola in Karatu District
- (ii) To enhance climate resilient rural water infrastructure and supply system in vulnerable Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities at Baray, Mang'ola and EndamaghangWards in Karatu District
- (iii) To Improve climate change resilience of forests and non- timber products for selected villages of the three wards of Baray, Endamaghan and Mang'ola in Karatu District
- (iv) To Promote climate change resilience of health systems at three wards of Baray, Endamaghan and Mang'ola in Karatu District
- (v) to Enhance capacity of Karatu District Council and Communities in three wards of Baray, Endamaghan and Mang'ola to design and implement climate change adaptation interventions and improve level of understanding of climate change related issues

Project Components and Financing:

This table presents the relationships among project components, activities, expected concrete outputs, and the corresponding budgets.

PART II: PROJECT / PROGRAMME JUSTIFICATION

A. Description of the project / programme components, particularly focusing on the concrete adaptation activities of the project, and how these activities contribute to climate resilience.

All five components and indicative activities under this project are focusing to achieve concrete adaptation outcomes. All activities will be implemented on the ground in order to build resilience and improve adaptive capacity of vulnerable Hadzabe (hunters and gatherers and Datoga(Blacksmith) communities. The proposed project will also promote gender responsive climate action. The details of the five proposed project components are further described here under and how these will contribute to community's resilience.

PART II: PROJECT JUSTIFICATION

PART II A: Description of the project components, particularly focusing on the concrete adaptation activities, and how these activities would contribute to climate resilience

All five components and indicative activities under this project are focusing to achieve concrete adaptation outcomes. All activities will be implemented on the ground in order to build resilience and improve adaptive capacity of vulnerable Hadzabe (hunters and gatherers and Datoga (Blacksmith) communities. The proposed project will also promote gender responsive climate action. The details of the five proposed project components are further described here under and how these will contribute to community's resilience.

Component 1:

Developing integrated climate resilient livelihood diversification system in the selected sites in three wards of Baray, Endamaghan and Mang'ola.

Outcome 1

Increase food security, income and resilience to climate change impact through Climate Smart practices in selected wards

Considering the fact that Tanzania's economy and the livelihoods of its people depend on climate sensitive resources, it is crucial that adaptation strategies that target climate resilient livelihoods are promoted. Livelihood integration and diversification is recommended so as to maximize the resilience. This is because reliance on only one means of livelihood may risk increased climate vulnerability if that particular livelihood activity fails. Integration of livelihoods increases cost effectiveness as may generate some co-benefits and synergies. For example, the integration of tree planting, poultry and rabbit keeping, growing traditional and modern crops and beekeeping on the same farm creates synergies. Trees protect soils and enhancewater infiltration in the soil, poultry and rabbit keeping supplies manure for crop growth, beekeeping helps protect forests. Thus this kind of integration enhances productivity while ensuring cost effectiveness. Furthermore, beekeeping integration enhances

pollination and increased income accruing from sale of honey. About 300 camps and farmsteads are expected benefit from the livelihood intervention in the wards of Baray, Endmarghan and Mang'ola in Karatu district either directly or indirectly. The adoption of integrated climate resilient livelihoods diversification system is envisaged to improve the household income by at least 30 % by the end of the project.

Output 1.

Beekeeping is one of the nature based livelihood activity with a potential to increase resilience to climate change impacts. This is output responds to the national bee keeping Policy which recognizes the importance of beekeeping sub- sector to sustainable development of Tanzania and conservation and management of natural resources. Beekeeping is a viable livelihood based enterprise benefiting communities living in and around forests particularly from the wards of Baray, Endamaghan and Mang'ola. Most importantly beekeeping can also be used a practical tool for raising the awareness of communities on the importance of forest management and conservation. Compared with cultivated crops, beekeeping is not very much affected by climate variations and can provide a more predictable income. The climate resilience of the beekeeping enterprise lies in the fact that the honey bees can tolerate high temperatures to some extent. The integration of beekeeping in a farm will facilitate crop yield through pollination. The direct beneficiaries will include 10 beekeeping groups in the three wards of Baray, Endamaghan and Mang'ola where each group can have up to 20 members including men, women and youth.

Output 2

Use alternative source of biomass energy promoted for Datoga (Blacksmith) communities in the three Wards of Baray, Endamaghan and Mang'ola

For communities to be more adaptive to impacts of climate change they need to adopt resilient less carbon intensive and climate change smart infrastructures, tools and products. Datoga communities use charcoal as source of fuel for forging metal tools and cooking. This project will introduce the use of alternative sources of energy and energy saving stoves. This output aims at empowering 80 communities of Datoga (blacksmith) homesteads to be able to understand climate change – energy related issues and how to make briquettes and cooking stoves. This intervention is in line with the aim of the government to ensure that at to increase least 50% use of alternative energy compared to current levels. This initiative is in line with the Tanzania Sustainable Energy for All (SE4All) Action agenda(2015).

Output 3

Rabbit and Poultry farming established/improved

This intervention aims at facilitating communities from the three wards of Baray, Endamaghan and Mang'ola to start and improve local chicken and rabbits enterprises for food and for income generation. This is a **potential** enterprise to generate income and building resilience for the poor households and women groups. According to Tanzania Livestock master Plan (2017) which sets out livestock sector investment interventions including better genetics, feeds and livestock health services. This is also well articulated in the Agriculture Sector Development Plan II 2015-2025 which is further translated into the Karatu Agriculture development Plan – Karatu DADPs. Therefore, this project will provide some technical assistance to interested

communities on how to establish andrun poultry and rabbit enterprise. The project will support small scale commercial poultry and rabbit enterprises with a view of enabling farmers to produce meat and eggs in very short time. This is envisaged to bolster the income of targeted communities thus enabling them to cope with climate induced losses in hunting and gathering. The project will support 10 poultry groups and 10 rabbit groups in the said wards by each group will have at least 25 members consisting of men, women and youth.

Output 4

Women jewelry and leather making business improved

Hunters, gatherers and blacksmith communities are also involved in cultural tourism where they share their cultural experiences to tourists and they also sell jewelry, metal tools and accessories and leather pieces of clothing and ornaments. This project intends to support these communities to improve their product better make, package and display their products. This in turn will help them to have more income which can support them to buy food and other household needs, This intervention is in line with the national tourism policy (1996) which is currently under review to better address nature base tourism for the purpose of improving community livelihoods and development of quality tourism that is culturally and socially acceptable, ecologically friendly, environmental sustainable and economically viable. In this project 15 groups of jewelers, 15 groups lather tanners and 15 groups of black smith communities will be empowered to improve their enterprises for markets within the project sites and beyond.

Output 5

The production of traditional crops for home consumption introduced

Most Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities usually do not engage in crop and livestock production. Climate change has left them food and nutrition insecure. They also face severe water shortage as result of increased activity by other community groups such as farmers and pastoralists. This project intends to listen to community and hear their local experiences and knowledge and what type of traditional and modern crops they think will be suitable for this community to be food and water sufficient. This is in line with the Agriculture Sector Development Programme II (2015-2025) which aims at ensuring transformation in agriculture sector with emphasis on commercialization of smallholder farmer's income for improved livelihood, food and nutrition security. This project intend to establish demonstration farms across the three wards for communities to learn, share experience on ho A total of 10 hectares will be used for different community groups of group of 20 people women, men and youth. These groups will be capacitated through training programs on good agronomic practices through farmers' field schools, Female Farmers Field Schools, Demo plots.

Component: 2

Enhancing climate resilient rural water infrastructure and supply system in vulnerable Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities at Baray, Mang'ola and Endamaghan Wards in Karatu District

Outcome 2

Enhanced climate resilient rural water supply system in vulnerable communities of Hadzabe (Gatherers and hunters) and Datoga (Blacksmith) at Baray and Endamaghan Wards

Rural communities in Karatu district depend on climate sensitive water resources which is relies heavily on climate sensitive water resources and infrastructures for their water supply. It is evident that water services in the proposed project sites are facing water security risks in various aspects such as scarcity and quality, both of which affect health and other economic development systems. Existing water sources have proved to be incapable of withstanding the effects of climate change and even increased water demands. Although quantification of water demand in these villages have yet to be well done by proper numerical models but based on villagers' view, field observation and visits paid to the community and issues raised in the planning workshops, it is clear that water shortage is a big problem especially to women and children and therefore a burden to peoples life quality, health and livelihood. In the two wards, community members are forced to fetch supplementary water about 30 kilometres away from their homesteads

Output 1

At least 10 boreholes drilled in Hadzabe (gathers and hunters) and Datoga (blacksmith) communities at Baray, Mang 'ola and Endamaghang Wards in Karatu District for improved water availability.

The supplementary water for most villages of Baray, Endamaghan and Mang'ola wards is also obtained from traditional shallow holes and wells often along the valleys. These traditional wells dry few days after the rain season, mainly from July - November. The traditional wells are often not secure, thus hazards like floods may cover them up or contaminate them with human or livestock wastes thereby exposing people to water borne diseases (e.g. cholera, dysentery), which occurs almost every year. All supplementary water sources usually dry up during the dry season, forcing people (more often women and children) to travel longer distances looking for unsafe water wherever they are found. It is a true worry that, most likely future climate change effects will further increase water scarcity and associated diseases problems in these hunters, gatherers and blacksmith communities. Under this output, climate resilient rural water supply and reliable water distribution networks will be established through drilling boreholes. Bore holes are the only reliable options as are considered to be more stable to climate shocks when compared to seasonal rivers which disappear every dry season. In addition, ground water in the these areas has regional recharge advantage when compared to localized recharges; hence ground water in Karatu is stable to seasonal rainfall variability, dry spells and drought. The indicative activities to be implemented under Output are:

• Drill boreholes in drought prone and water scarce villages and Install solar energy

drivenwater pumps at selected villages of wards

- Construct water storage tanks and distribution network systems at Baray, Endamaghan and Mang'ola wards
- Construct community water points/ community water Kiosks for network systems in the project sites

Output 3

Community Water Users Association (WUAs) established, facilitated and committee members trained on operational and maintenance of the water supply systems

Establishment of WUAs and capacitate them with necessary tools and expertise will empower vulnerable communities in the two wards to use their own knowledge and decision – making process to take action and active role to deliver the expected outputs of Component 2 in longer term, beyond project lifetime. The indicative activities to be implemented under this output are:

- Formula water governance structures (WUAs) and promotes equitable water allocation for all uses and revenue collection.
- Promote formulation of water governance/by laws to regulate effective use of water and protection of water sources
- Conduct Technical Trainings of Trainers on maintenance and operations; management of finance, accounting and group dynamics issues to selected community members of WUAs for the three selected wards.

This output is proposed to put good and sustainable institutional structure to manage community and village climate resilient water supply system in the project sites. The output suggests establishment of WUAs which will be trained on group management and dynamics, maintenance and operations of the rural water systems.

Output 4

Climate resilient behavioral change and governance at community level enhanced

In this component community members will be trained and given opportunity to share their local knowledge and experience on how to change behavior towards water governance at community level. This project will support communities to form representatives from traditional leader's women, men and youth. The CBWSOs are being recognized by the new Water and sanitation Act No.5 of 2019 which established "Rural Water Supply and Sanitation Agency – RUWASA" with responsibility to manage rural water supply. Under this the new Water and sanitation Act, 2019, the Village water schemes are CBWSOs. These are required to operate rural water supply in the communities in a professional way where technical managers and Accountants will be employed be employed and paid by the

Government and will work with the community representatives (Village water Boards) to sustain the water services. These CBWSOs will be backstopped by RUWASA District Managers' Office in Karatu district for technical and management issues. All CBWSOs to be formed will be responsible to set water tariffs, collect revenues from water. About 8 CBWSOs will be formed in each of the selected villages.

COMPONENT 3:

Improve forest and environmental services and functions

Outcome 3:

Improved ecological and environmental services and function to sustain climate sensitive livelihood

For many years, ecological systems in Karatu have been impaired by a combination of both human induced and climate change related drivers. The original and natural ecosystems, covered by savannah thickets were degraded following the decision by colonial government to establish groundnut scheme. Since then, other human induced drivers for environmental degradation such as poor farming methods, deforestations, charcoal making and overgrazing are common in the area. Unless novelty appeares which integrate community and ecosystem based solutions to tackle climate change beimplemented, the trend will continue endlessly, with disastrous effect to the vulnerable community. This project under component 3 proposes innovations which promote conservation measures linked to economic benefits to the people for tackling climate change in the district. The proposed activities under component 3, are also expected to provide excellent alternative income generating options, contributing to reduction of income poverty, providing adaptation benefits and building climate resilience of vulnerable communities specially women and girls through selling bee keeping products, various fruits obtained from fruit plants and selling forest products obtained from woodlots. Communities already use modern and traditional bee hives and practices. There is much room for improvement and the opportunity to link honey production to tourist market in Karatu and Arusha. The areas to be restored under this project has been pre- determined based on the inputs gathered from the field visits, community discussions, by carrying out transect walks in landscape The total areas for ecological restoration and rehabilitation are yet to be numerically quantified at this stage but expected to be about 30% of the approximately 600 hectares potential for forest restoration activities.

Output 1

Improve ecological and environmental services and functions in Baray, Endamaghan and Mang'ola wards

The ongoing degradation of environmental and ecological systems coupled with climate change issues has reduced the coverage of forests and woodlands and the availability of associated goods including accelerating land degradation and water catchments in Karatu

District. Across the district, wetlands have been severely degraded as a result of inter alia:

- a) Use of forestry as a source of energy
- b) Intensive cultivation of crops such as maize and horticultural crops;
- c) Excavation of sand and clay for brickworks; and
- d) Grazing activities.

These activities are in line with the National Environmental Action Plan (NEAP (2020) which advocates for comprehensive incorporation of environmental concerns into natural resource planning and economic development. Therefore, this component and the proposed output activities seek to establish and implement ecological restoration and rehabilitation plans and restoration activities of hills, observed bare land, mountainous and woodland systems. All the eight villages will be engaged for restoration and rehabilitation activities including tree planting campaigns by engaging communities in tree planting on surrounding homesteads and camps, other degraded landscapes in schools and other public institutions.

Output 2

Integrate management of environmental and ecological systems implanted to sustain climate sensitive rural livelihood

The output will implement Ecosystem-based Adaptation (EbA) activities such as Promote bee keeping activities in woodland land and mountainous systems and fruit plants as income generating activities. The indicative activities to be implemented under Output 2 are:

- Establish and implement ecological and forest restoration and rehabilitation plans (hills, mountainous and woodland restored and conserved) in selected villages of Baray, Endamaghan and Mang'ola wards.
- Promote improved ecosystem based income generating activities such as improved bee keeping activities in woodland, hills and mountainous systems and fruit plants planting in selected villages of Baray, Endamaghan and Mang'ola wards.
- Mobilize enclosure systems in degraded and ecosystems to promote natural regeneration and recovery of ecological functions and explore the use of local/traditional institutions to strengthen management of sensitive ecological systems in selected villages of Baray, Endamaghan and Mang'ola wards.

COMPONENT 4:

Promoting climate change resilience of health systems at three wards of Baray, Endamaghan and Mang'ola in Karatu District

Outcome 4:

Improved health and sanitation infrastructure and services for hadzabe and Datoga(blacksmith) in three wards of Baray, Endamaghan and Mang'ola in Karatu District

This component aims at promoting, preservation and maintenance of public health with a view of ensuring of comprehensive functional and sustainable public health services to the vulnerable communities in Karatu district. This component is in line with the national health Policy (2007)

which aims at improving provision of health service to all people by reducing disability, morbidity and mortality, improving nutritional status and life expectancy. The policy recognizes that good health is a major resource for poverty alleviation and economic development

Output 1

Health - Climate change related risk and vulnerability assessment for strengthened capacity of health sector at Karatu District undertaken

This output intends to undertake a comprehensive District Climate change related risk and vulnerability assessment for the aim of identifying potential climate change risks and vulnerability that will be documented.

Output 2

Staff and community awareness on climate related diseases and adaptation in three wards of Baray, Endamaghan and Mang'ola in Karatu District strengthened

This output will be achieved by improving knowledge to health personnel and communities at Karatu District Council on climate change related health risks through integration and strengthening climate change knowledge into health training and research.

Output 3

Mainstreaming climate change into health projects and programmes at Karatu District

Mainstreaming of climate change into Karatu District health strategies, programme and projects for the aim to promoting climate change resilience of public health systems. This output is in line with the overall goal of the National Climate Change Response Strategy (2021) and Tanzania Health NAP (2020). Mainstreaming of climate change will strengthen the capacity of health sector at district level to make climate –informed decisions.

Output 4

Climate smart community health resource centers built, re- tooled and strengthened

This project proposes to build a community resource centers in all 8 selected villages for committees to meet and exchange experience. These centers will also provide first aid emergence services, training on human nutrition and other relevant matters important to the communities

COMPONENT 5:

Enhancing capacity of Karatu District Council and Communities in three wards of Baray, Endamaghan and Mang'ola to design and implement climate change adaptation intervention and improve level of understanding and awareness

Outcome 5:

Improved capacity of Karatu District Council, Hadzabe (hunters and gatherers) and Datoga (Blacksmith) communities in planning and implementing and monitoring climate adaption actions.

The outcome and output activities of this component are designed to strengthen the capacities of all actors by improving their understanding of climate change. This will support the

communities to participate in implementing measures that are necessary for success of resilience capacity building and for the ongoing replication of adaptation strategies in the district; hence this component, when implemented is expected to make a lasting contribution to the sustainability of all climate change adaptation measures in the district and beyond. The output will facilitate integration of good adaptation practices into existing development planning at community levels, village and ward development plans. Enhancing knowledge management system and capacities for planning, coordination and implementation at the local level is critical to guarantee effective climate adaptation in the district.

Output 1

The capacity of Karatu District Council in facilitating public awareness and understanding of climate change related issues and the adoption of resilient climate livelihood practices strengthened

This project will support institutional capacity building for planning and management of adaptation interventions is vital for successful implementation. The project will work in an integrated manner on strengthening capacity of the local institutions, farmers associations and communities regarding promoting the adoption of climate smart practices. At one level, the project will seek to influence and involve local people in relation to adopting smart agriculture by developing capacities among communities. This approach will be especially effective in proposed project areas given the well-developed local organization structures that exist in local communities. Community groups and institutions will be supported (through the provision of encouragement and technical advice) to promote the adoption of climate smart livelihood practices. In addition, communities will be also capacitated to practice climate smart intervention at their camps or homesteads. The project will also promote learning and knowledge management so that the key messages from the project reach as many people as possible. This will be done by facilitating the district councils and local communities to share and communicate the project results and lesson learnt. Thus, the project will craft mechanisms by which the project results and lessons will be disseminated to the wider community of project districts and Tanzania at large. Karatu DC staff at all levels will be supported to design and implement climate change actions.

Output 2

Established Community institutions to assist in collecting climate related local knowledge (including traditional knowledge) and disseminate relevant climate change adaptation knowledge and information to communities in three wards of Baray, Endamaghan and Mang'ola

In this component community representatives from selected villages will be facilitated to establish their own institutions. Selected members will include elder's young people men and women

Output 3

Capacity of the hunters, gatherers and blacksmith communities in planning and decision making for undertaking climate resilient livelihood practices is strengthened.

Selected committee members will form a Community Adaptation Planning Committees CAPCs. Members of committee will be trained and capacitated to participate in planning, implementation and monitoring of climate change related interventions.

Output 4

Upgrade Karatu District metrological services and its network and infrastructure to the areas surrounding the three wards of Baray, Endamaghan and Mang'ola for provision of essential data for climate service and early warning systems

In this project, staff of Karatu DC will be capacitated to be able to collect and use climate information in their decision.

Key points START OF THE GULLY

Figure 2: Using graded percolation trenches to capture water out of the valley and grow trees. Beeking is also possible after better performance of the trees

START OF THE GULLY

Figure 3: Once the trenches are constructed using the keyline principle contour structures (on contour lines) can be marked and constructed to grow additional trees, bushes and grass

Fig 1&2

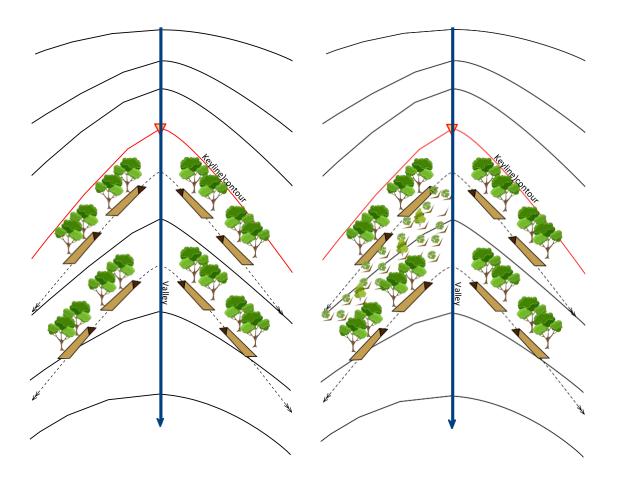

Figure 4: Hardpan area: In these areas only very limited grazing activities can be sustained. After rehabilitation activities such as beekeeping, folders and woodlot activities can be sustained as alternative income generating activities

The indicative activities to be implemented under Output 3.1are:

- 1. Establish and implement ecological restoration and rehabilitation plans (such as shrub/grasses establishment on contour bands/windrows, woodlots and woodland restoration) in selected Wardsand Villages of Karatu District
- Promote bee keeping activities as income diversification and demonstration of adaptation benefits generated from ecological restoration areas under activity 3.1.1 to increase adaptive capacity of vulnerable marginalized groups (such as women, girls, old people)
- 3. Promote tree planting (trees with both environmental and socio economic values in midand long- term such as fruit plants and wood plants for timber) activities in residential areas, along streets and roadsides and in the degraded areas
- 4. Promote scaling ups of projects' Best Techniques (BT) and Best e Practices (BAP) on ecological restoration and rehabilitation in other areas of the district including in Dodoma region

Component 4: Building capacities of extension services and institutions at District,
Ward and Village levels to support local communities and
knowledge management

Outcome 4: Capacities of institutions, extension services and trainers strengthened to reduce risks associated with climate- induced livelihood failures in Karatu district

Output 4.1: Institutional and technical capacity of the district and communities in Karatu is strengthened to be able to with stand impacts of climate change and variability

Factors for vulnerability of communities in Karatu includes limited financial resources as well as limited capacity of the district management structures and extension services workers in supporting the local communities in the sustainable livelihood improvement and environmental related resources. The project will address some of these challenges through capacity building of district and village management structures and extension workers through workshops and teller made-on the job trainings that will be provided through the project's established demonstration sites, Farmer Field Schools (FFS), Female Farmer Field School (FFFS) and Ecoschools and other specialized trainings centers such as specialized bee-keeping center at Mang'ola. The outcome and output activities of this component are designed to strengthen technical and institutional capacities required to implement adaptation measures at the district and at village levels. This component will contribute to build sustainability of the projects' outcomes and impacts. The output will promote mainstreaming of adaptation issues into development plans in the district and at village levels. In addition, documentation and dissemination of lessons learned and best practices will be a critical aspect of the project. These lessons will support replication of some of the interventions with better and higher adaptive effects to the impacts of climate change. At the same time, documentation will enhance upscaling and out-scaling to other district in Dodoma region or any other regions in Tanzania. The project will develop communication materials with informative material for instance in form of posters, flyers and brochures that are intended to facilitate knowledge transfer as well as sustain project interventions. Study tours between villagers and women groups and other relevant villagers and districts will be organized. A comprehensive training plan detailing the specific trainees, content and duration of the training will be developed to guide the capacity building programme. In this way knowledge management will be enhanced across levels and will also be fostered across the departments and sectors in the districts.

The review of district and village plans will therefore allow integration of climate elements and climate change adaptation issues into their development plans. Monitoring and evaluation of the reviewed district, ward and village plans will be conducted in the second quarter of the third to ensure climate and adaptation indices are well reflected and their implementation plans address climate adaptation issues clearly. Monitoring indicators and means of verifications will be developed together in comprehensive the project monitoring and evaluation plan. In this way is expected that, climate change sensitivity culture will be built within the veins of development

planning processes at lower levels. Lessons emerging from the mainstreaming process will help to up- scale climate risk management into the medium and long term development plans to enhance climate resilience in local communities outside the project sites in Karatu district and will be a key practical lesson to be replicated in other local government authorities in Tanzania and during development of the overall National Adaptation Plan (NAPs).

The indicative activities to be implemented under Output 4.1 are:

- i. Develop a detailed training plan to guide the capacity building program for the Project. A consultant will be hired to develop a detailed training plan highlighting the specific content with relevant examples to the prevailing conditions in Karatu district, each ward and villages involved in the project implementation.
- ii. Develop training modules to build capacity of stakeholders on a continuous basis in all project sites
- iii. Review and mainstream climate change adaptation measures into sustainable development plans at district, wards to village levels
- iv. Documenting and disseminating lessons and best practices from project interventions
- v. Facilitate provisional of project monitoring and evaluation facilities, tools and equipment

The improved adaptation practice is highly dependent on behavioral change and is thus suggested to have a solid campaign of farmers tailored trainings using the Farmer Field School Approach, maintenance and operations of water and micro irrigation infrastructures, bee-keeping techniques, folder management, modern livestock keeping practices, tree planting and tree nursery management, woodlots management, honey processing, crop management and climate smart crops, good agriculture practices and agricultural produce processes and packaging and marketing. The trainers will be selected from among the experienced district experts and other government experts from relevant ministries, research and higher learning institutions. Both trainees will be evaluated in each training session. The trainees will be evaluated mainly through questions and answers, practices in practical sessions in the field, simple tests, group works and presentations, while trainers will be evaluated mainly through checklists given to both trainees, district Authorities and Project management teams. The topics to be covered should be defined together with farmers, but must at least cover the following aspects:

The topics to be covered should be defined together with stakeholders during development of a detailed training plan to guide the capacity building program for the Project, but must at least cover the following aspects:

PART II B: Description how the project provides economic, social and environmental benefits, with particular reference to the most vulnerable communities, and vulnerable groups within communities, including gender considerations. Describe how the project will avoid or mitigate negative impacts, in compliance with the Environmental and Social Policy and Gender Policy of the Adaptation Fund. (Refer to Annex 5)

All five components of this project are designed to contribute to the environmental, economic, and social benefits especially at the community level whereby local farmers and marginalized groups (including. women, youth and people with disabilities) will directly benefit through the improved capacity to adapt to the impacts of climate change. This project also complies with the Environmental and Social Policy of the Adaptation Fund whereby relevant risks are clearly identified, and mitigation measures are proposed.

Environmental benefits

The proposed project is expected to have multiple environmental benefits. The adoption of climate smart agriculture practices (which promotes soil and water conservation) and other best environmental conservation practices such as tree plantation will improve the natural vegetation cover thereby contributing to proper management of soil and water resources. In particular, tree planting will significantly contribute to the restoration of forests which were previously cleared for various reasons. To address water shortage challenge, the project will support the construction of boreholes and water supply system will assist in providing sustainable source of water for consumption and other uses.

Water will be managed through formation of Water Users Associations which among others will be required to ensure protection of river catchments. The establishment of integrated farming systems the project will contribute to nutrient cycling, soil fertility and crop pollination through honey bees. All these are essential for enhancing the resilience of the ecosystems and communities in the targeted project sites.

Economic benefits

The project has been designed to transform the economic situation of rural communities in the target Baray, Endamaghan and Mang'ola wards in Karatu District. The project will be supporting the availability of water which is a very vital resource in livelihood of the communities. With the availability of water in place about 300 camps and homestead are envisaged to keep poultry and rabbits, produce traditional and modern crops which will not only increase household food security but also income. The income of beneficiary households is expected to increase by at least 20% through implementing alternative livelihood strategies as explained in component 1 of the project. The activities to be implemented under components 1 and 3 will transform the economic status of communities from resource-poor and vulnerable to resource-rich and resilient to climate shocks. The implementation of livelihood-based enterprises such as beekeeping, poultry and rabbit keeping, cultivation of

traditional and modern crops offers many economic benefits.

C: Describe or provide an analysis of the cost-effectiveness of the proposed project / programme.

a) Cost effectiveness from a technical perspective

It is believed that enhancing direct engagement of vulnerable communities in villages to empowers local communities to conceive and drive local adaptation responses directly, build their adaptive capacity to climate and seasonal weather shocks, foster transformation of their livelihood systems to be more climate resilient and allow them to scale up successful climate adaptation actions. This enhanced direct implementation approach using force account modality and self-reliance spirit existing in villages is a perfect time sensitive, efficient and new cost-effective way to deliver concrete adaptation projects with direct benefits at the local level in the United Republic of Tanzania. The costly conventional way, the top-down approach of designing and implementing adaption project from central government, usually from Ministry headquarters, facilitated by multilateral -implementing entities would not permit this level of local ownership, design and implementation.

For instance, adaptation projects such as the Adaptation Fund Project Implementation of Concrete Adaptation Measures to Reduce Vulnerability of Livelihood and Economy of Coastal Communities in Tanzania- which is currently under implementation in Dar es Salaam and the Least Developed Countries Fund (LDCF – GEF) project – Ecosystem = Based Adaptation for Rural Resilience in Tanzania, both implemented under the United Nations Environmental Program (UNEP); and the LDCF - project under the United Nations Development Program (UNDP) - Strengthening Climate Information and Early Warning Systems in Tanzania for Climate Resilient Development and Adaptation to Climate Change" used top – down approach and their running cost when quantified using elements like fuels costs from Ministry headquarters to project sites in villages and districts, the cost of international consultant fees extremely high are perceived to be extremely higher when compared to the proposed project. This project will enable climate finance from the Adaptation Fund (AF) to flow directly to activities what will be implemented by vulnerable communities themselves in Baray, Endamaghan and Mang'ola wards, and will provide an important complementary adaptation response to higher level in the district and the nation at large. Another example is the Africa Adaptation Program (AAP) which was also implemented through UNDP funder by JICA, has limited community involvement and engagement of Local Government Authority at district and village levels. Through has strong concrete adaptation activities, yet it appeared to be reactive and costly as it didn't tap the in-kind cost contribution from communities using the popular force account modality.

In-contrast the project funded by the African Development Bank (AfDB) = Institutional Support for Climate and Seasonal Weather Information for Adaptation Planning in Mwanga and Same Districts in Northern Tanzania, had concrete adaptation interventions which used Force

Account and Ujamaa spirit to deliver activities at local levels. The cost recovery in-terms of monetary was estimate to be about 49%. However, its management is being coordinated from the Vice President's Office, more than 500 km away to the project sites in Same and Mwanga districts. This resulted into project administration/execution cost amounting to 30% of the total project cost, nevertheless this project was able to promote transformation of traditional agriculture and water supply in Jipe and Mabilioni Villages and increased adaptive capacity of local communities to current and future climate risks. This project, is learning from lessons and experience from this project while recognized that the administrative costs remains well below 9.5%, will amplify the value of requested AF resources by almost over 40%.

Cost – effectiveness of this project will also be delivered through socio-economic and income improvement in communities, efficiency way of timely delivering actions on the ground including effectiveness and sustainability of the proposed climate interventions. For example, current approach to climate related risk management and poverty reduction projects in Karatu have been mostly reactive based on time events which in most cases are not sustainable. Options like supplying food aid to communities as adaptation actions to respond on the vagaries in climate and seasonal weather is mostly reactive and costly relative to promotion of climate resilient – water supply with the view of transforming rural livelihoods and improving income generation. Socio-economic and income generation expected from integrated forest management will be effective, efficiency and economical way to realize adaption benefits compared to traditional ecological restoration project in the United Republic of Tanzania in the 1980s, like the costly HADO program which failed due to limited integration of livelihood activities For example, preliminary socio-economic analysis on the proposed project activities (climate resilient-rural water supply, bee keeping, poultry and rabbit farming, when implemented using Force Account modalities have highest internal rates of return beyond 40 -89% higher benefit; cost ratios, currently estimated to be up to 27:1500 for concrete actions under components 1, 2 and 3. It is therefore obvious that, the proposed project is cost effective and the project's investment will accrue large benefit for life and livelihood quality improvement vis-à-vis the traditional and existing way of implementing adaption projects in the United Republic of Tanzania.

Table 4: Project Cost and Benefits

Component	Project	Concrete adaptation benefits	Avoided losses	Trade offs
	Cost (USD)			
1.Enhancing climate resilient rural water supply system in vulnerable Hadzabe (gathers and hunters) and Datoga (blacksmith) communities at Baray, Mang'ola and Endamaghan Wards in Karatu District		 Easy and reliable access to domestic water Availability of water for livestock and crop production Improved food availability Increased food and nutrition security Reduced time for communities to collect water, hunt and gather Increased boma income/assets Improved experience and knowledge on water resource management Increased resilience to impacts of climate change 	Food and nutrition insecurity Loss of crop and livestock produce Loss of boma income Increased poverty Reduced resilience to climate change	Lack of reliable and sufficient source of water which increases government spending Increase government spending of humanitarian food supplies for communities that have affected by loss of water and food
Developing integrated climate resilient livelihood diversification system in the selected sites in three wards of Baray, Endamaghan and Mang'ola 3 Improving climate related health.		Reduced vulnerability to climate change impacts Improved food and nutrition security Improved management of forest ecosystem Reduced income poverty Enhanced resilience to climate change impacts Improved access to beauth.	Food and nutrition insecurity Extreme poverty Ill health vulnerability to climate change impacts	Deforestation Increased vulnerability to climate change Increased cost of adaptation for the government to provide food and other social amenities to vulnerable communities
3.Improving climate related health		Improved access to health	Disease outbreaks	High incidence o

Component	Project Cost (USD)	Concrete adaptation benefits	Avoided losses	Trade offs
services and awareness for Hadzabe and Datoga (Blacksmith) communities in 3 wards ofBaray, Endamaghan and Mang'ola		services Improved sanitation Increased productivity Reduced vulnerability to climate related health incidences Increased resilience to climate change effects	 Vulnerability to climate change impacts Food and nutrition insecurity Loss of Life 	diseases outbreak Poor health which may affect productivity of communities Increased government spending to provide health services to vulnerable communities
4. Improve ecological and environmental services and functions		 Increased natural resource management capacity Increased forest cover Increased boma income Enhanced resilience to climate change 	 Degradation of natural resources Loss of forest cover Loss of livelihood Loss of life due to floods and drought Food and nutritional insecurity 	High loss of biodiversity Increased cost of adaptation for flood and drought victims Increased cost of providing food for hunger victims Increased cost of health services for victims of extreme weather events Land degradation

Component	Project Cost (USD)	Concrete adaptation benefits	Avoided losses	Trade offs
5Building institutional capacity of Karatu District Council staff and Hadzabe and Datoga (blacksmith) communities in planning,implementation of climate change adaption actions		Improved capacity of Local Government Authority and communities to plan and implement resilient climate resilient adaptation actions Improved coordination of climate interventions at local level Increased capacity to communicate project results and key lessons learnt Increased resilience to climate change	 Increased vulnerability Inability to predict future climate change impacts Loss of livelihoods Food and nutrition insecurity Abject poverty 	 Increase numbers of victims of effects of climate change as a result of Local government and community poor planning and limited preparedness Reduced adaptive capacity of communities Increased adaptation cost Failure of adaptation interventions as a result of not integrating climate change action into District of plans and budgets

b) Cost effectiveness from a project management perspective

The Project Management Unit (PMU) is proposed to be based in the project area at the district headquarters. As much as possible the project will utilize the existing government staff available at the district and at HakiKazi Catalyst including to be hosted in the buildings of the district headquarters. No new staff is expected to be hired; no pensions and insurances will be paid by the requested fund under this project as those costs are already covered by Karatu District Council and HakiKazi Catalyst. However, the project will pay some reasonable top up salaries only for project key staffs who will be placed in the PMU. This is viewed to be cost effective and promote best use of resources by reducing project management costs. Both Karatu District Council and Hakikazi may hire the services of other experts at reasonable rates. Utility bills of project staff will be covered by Karatu District Council and Hakikazi Catalyst. This will cut-off the project running cost by around 25 – 40%.

D: Describe how the project is consistent with national or sub-national sustainable development strategies, including, where appropriate, national adaptation plan (NAP), national or sub-national development plans, poverty reduction strategies, national communications, or national adaptation programs of action, or other relevant instruments, where they exist.

The project being proposed here reflects communities, district and national issues and therefore is consistence and in -line with national vision for sustainable development, policies, plans, strategies, programs and actions. For instance this project is well reflecting top most five priorities (adaptation contributions) listed under the current Nationally Determined Contributions, the NDCs commits to: Up-scaling the level of improvement of agricultural land and water resources management; Increasing yields in environmentally sustainable way through inter alia climate smart livelihood interventions; providing accessible mechanism for vulnerable communities such Hadzabe (hunters and gatherers) and Datoga (Blacksmith)against climate related shocks; and strengthening knowledge systems, extension services and water supply and health infrastructure to target climate actions, including through the use of climate services and traditional knowledge. For water related contributions, the NDCs indicate to: promote integrated water resources development and management practices and development and sustainable exploitation of groundwater resources. For livestock actions, the NDCs intend to promote climate resilient traditional and modern knowledge for sustainable management systems and practices; enhance climate resilient livestock infrastructure and services, promote livelihood diversification of livestock keepers; and Increasing livestock production through climate smart livelihood agriculture interventions. For ecosystem and forestry related commitments, the NDC will be safeguarding the ecosystem services, including through the promotion of alternative livelihood options to forest dependent communities. Therefore, all five components of this project and their output activities are

strongly supporting implementation of the mined Contributions (NDCs, 2021) and the National Climate Change Response Strategy 2021 as all of them are consistence with the Adaptation Contributions.

In addition, this project is also well reflecting top most three adaptation priorities listed under the National Adaptation Programme of Action (NAPA, 2007), reflects the first and second priority sectors identified under the intended Nationally Determined Contributions (INDCs, 2014) and the National Climate Change Response Strategy (URT, 2021) that are most vulnerable, which need urgent and intergrated adaptation measures. The project is also in consistence with the Tanzania Development Vision 2025, National Five-Year Development Plan (FYDP) III (2020/2021- 2026/2026), the First and the Second National Communication submitted to the the United National Framework for Convention on Climate Change (UNFCCC), the National Strategy for Growth and Poverty Reduction (MKUKUTA II), National program under the Tanzania Social Action Fund (TASAF). The Roadmap of the National Adaptation Plan (NAPs), Karatu District Strategic Plan (2017/2018- 2021/2022). All these national and district documents take account and recognize the challenges and negative effects posed by climate change. In this way there is a need to implement climate actions at local levels, where vulnerable people, particularly women and children who suffer the most and are now being forced into deeper poverty challenges as a result of increased climate vagaries. This project is also linked to sustainable Development Goals (SDGs); particularly SDG 1: End poverty in all its forms everywhere; SDG 2; End hunger, achieve food security and improved nutrition, and promote sustainable agriculture; SDG 3: Ensure healthy lives and promote wellbeing for all ; SDG 5; Achieve gender equality and empower all women and girls; SDG 6; Ensure availability and sustainable management of water and sanitation for all, SDG 13; Take urgent action to combat climate change and its impacts (in line with the United Nations Framework Convention on Climate Change); and SDG 15 Protect, restore and promote sustainable use of terrestrial ecosystems., sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss. In the same way, the proposed project is in line with the Agenda 2023; the Africa we want which promotes issues of sustainable and inclusive economic growth and to take actions to reduce the effects of climate change in rural areas. Additionally, the linkages to the national and sub national/district policies and other poverty reduction strategies can be easily seen at each component.

The project is also consistence with the current Karatu district plans, which thrive to reduce poverty among communities in this climate impacted area, a strategy to introduce poultry and rabbit farming, production of traditional and modern crops will ensure food and nutrition security and reliable income and resilience to climate change. The project will support implementation of this strategy and a plan is sought to have satisfactory extension services

E: Describe how the project meets relevant national technical standards, where applicable, such as standards for environmental assessment, building codes, etc. and complies with the Environmental and Social Policy of the Adaptation Fund.

The proposed project is aligned with relevant national technical standards and meets requirements/standards stipulated by Environmental Management Act (Cap. 191 of 2004) and its subsequent Environmental Impact Assessment (EIA) and Environmental Audit (EA) Regulations (G.N. No. 349 of 2005). Since the project is mainly aiming at improving the state of the environment in Karatu district as well, it will not generally have negative environmental impacts. It is clearly expected to have positive environmental impacts through improving the environment and ecosystems of the area, through improving the sustainable management of land, terrestrial and other environmental systems through addressing issues of community resilience to climate change and improving community livelihoods.

The project also took into consideration of the broader of the National Guidelines for the Preparation of Water Safety Plans - Resilient to Climate (2015). Other pertinent national standards for rural water supply, agriculture, forestry and beekeeping, environment, agriculture and food security and village land use planning/rural land tenure systems will be highly considered at advanced stage of designing of this project and during implementation. In that way, the proposed project will be fulfilling vital national policies, plans, strategies and programmes set by the United Republic of Tanzania including plans and bylaws formulated by Karatu District Council. Similarly, this project is relevant to the Environmental and Social Safeguard policy of the Adaptation Fund (AF) and any other Environmental and Social Safeguard Polices of International and UN agencies such as the World Bank as its intervention will enhance sustainable development benefits while avoiding unnecessary harm to the environment and communities. All activities under each component will facilitate social security of the riparian communities and veracity of the environment. However, the executing entities (Karatu District Council and Haki Kazi Catalyst) have adequately screened this project proposal and will place this Adaptation Fund. This is because there is no any component of this project which indicates any serious risk to the environment or social systems and on public health.

F: Describe if there is duplication of project with other funding sources, if any.

There is no any duplication of this project with other funding sources. This project will rather complement Any efforts geared to foster adaptation actions in Karatu district for climate resilient livelihoods thematic area. Preliminary meetings and discussions were conducted with various stakeholders at village, ward, division, district and national levels to confirm the existence of potential synergies of proposed activities with various national development and climate action, which have suffered absence of funds. The AF resources will therefore build on ongoing district development programming as operationalized

through its investment and operational budgets. Karatu district like any other Local governments receive funding from the national government and ministries through core programmes as well as through more targeted projects (including donor -supported projects). The proposed project will build on core operational funding delivered to the district through the departments of agriculture, planning, environment, forestry, tourism, beekeeping and Rural Water Supply Agency (RUWASA) in Karatu. This will also build on more targeted projects or initiatives being implemented in Karatu particularly those funded by adaptation fund such as; Bunda Climate Resilience and Adaptation Project currently being implemented in Bunda Districts; Enhancing Climate Change Adaptation for Agro-Pastoral Communities currently being implemented in Karatu District, Enhancing Climate Change Resilience of Coastal Communities of Zanzibar currently being implemented in Unguja and Pemba Islands.

Other Programmes and initiatives that are currently being implemented include; Livestock Development in collaboration with IFAD which work with livestock keepers, agropastoralists and other land users in Tabora, Shinyanga, Ruvuma regions to support integrated dry land-based livelihoods including access to markets and income generation while providing ecologically sound strategies for resolving conflicts between farmers and pastoralists; Institutional Support for Climate and Seasonal Weather Information for Adaptation Planning in Mwanga and Same districts, Northern Tanzania the project funded by the African Development Bank (AfDB), had concrete adaptation intervention which used Force Account to deliver activities at local levels. Therefore, AF resources under this project are expected to build synergies on the ground particularly for component 1, 2, 3 with activities related livelihood improvements and ecological restorations, rather than duplication of resources. However, there is no geographical duplications with the sited donor funded project. There is no fund which has been allocated to implement this project, except this application to the Adaptation Fund.

G: If applicable, describe the learning and knowledge management component to capture and disseminate lessons learned.

Issues of learning and knowledge management including dissemination of lessons learned are captured under component five; which aims to strengthen local institutional capacity for effective adaptation strategies and reduce risks associated with climate-induced socio-economic failures in Karatu district. Hence, this project will utilize a fraction of the requested fund to build core knowledge capacity and to disseminate results and outcomes including sharing lessons which will be generated by the project. Under Activities 5.1.3, 5.1.4,5.2.1, 5.3.1 and 5.4.1 where issues of learning, trainings and communicating results will be effectively implemented. In this way, issue on climate change education and awareness raising will be well addressed. Participatory approaches and community involvement through volunteering to implement project activities, they're in – kind contribution, trainings, tour and visits and on-site demonstrations will be conducted as part of learning and knowledge management. Sharing project results and communicating outcomes at various community and inter-village levels will also be conducted under

component five. Positive project results and outcomes will be also communicated and disseminated at regional, inter district, national and international levels through progress reports, seminars, meetings, workshops, project briefs, various publications in peer reviewed journals. Other means such as newspapers, radio and video documentaries, techniques and achievements will be used as well to share and communicate lessons and outcomes of the project. Moreover, various technical training under short term basis will be conducted as part of knowledge management.

H: Describe the consultative process, including the list of stakeholders consulted, undertaken during project preparation, with particular reference to vulnerable groups, including gender considerations, in compliance with the Environmental and Social Policy and Gender Policy of the Adaptation Fund.

a) Consultation during development of the KARAHADA project proposal

Stakeholder consultation for this project was done in three phases. This include consultation with Hadzabe (hunters and Gatheres and Datoga (blacksmith); consultation with Local Government officials and leaders and consultation with other actors who have been working in Karatu District or are currently working in Karatu. These consultations were preceded by national level consultation were representatives from Government Ministries and Agencies, Academia and researchers were consulted. The aim of this stage of consultation was to present the opportunity for this round of funding and agree on the sectors/ Districts to implement projects which will support to enhance resilience of Tanzanians. This meeting was in July 2021. where participants were in consensus that Karatu district be one of the targeted District and in particular the Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities. The list of participants to this workshop is attached as Annex 2

Community consultations were conducted from 12th -17th July in Karatu. This participatory process was complemented by field visits to different Hadzabe (hunters and gatherers) and Datoga (blacksmith) camps and homesteads. The areas visited include Quangdeng Dumbechan, Mbuga Nyekundu and Mikocheni with the aim of getting more physical observations and eye witness on the full picture of the landscape, socio - economic interactions and vulnerabilities, needs and challenges of the these communities. The consultations assisted in soliciting viewpoints and to better understand the problem, it's root causes and potential interventions that would achieve greater resilience to climate change shocks in Karatu district and for Hadzabe and Datoga communities. Consultations were done to women and men separately and then joint consultations were done to give voice to the marginalized group or individuals. These meeting for pre-designing of this project assisted to perform quick analytical scanning of gender and environmental related issue as well as qualitative analysis and reviews on how climate change affects woman and men differently to facilitate proposing gender sensitive actions. The list of community members and traditional leaders consulted is attached as Annex 2.

The project formulation team conducted a two intra — and inter-departmental meetings in the district with senior officials and technical experts in Karatu as well as at Hakikazi Catalyst offices in Arusha to share and exchange views on the proposal, and to jointly identify and align priorities for the development of the full proposal. Thereafter, a series of virtual consultations among key technical and legal staffs between Karatu district council and Haki Kazi Catalyst were also conducted, The district and council leadership and head of departments were also involved in site selection of the project, Relevant face to face virtual consultations on processes involved experts from accounting, procurement, planning, agriculture, water, tourism forestry and beekeeping, land use and settlements, livestock, environment and cooperatives sections. The meetings also involved the representatives of NGOs working in Karatu. Because of COVID 19 pandemic follow up consultations were made by phone. This included consultation with Division, ward and village leaders (the list of district experts and other partners involved in the consultation process is attached as Annex 2).

Further consultations continued with the staff of NEMC where the proposal was evaluated and refined to align with development polices and plans and strategies of the United Republic of Tanzania and with that of the Adaptation Funds.

Figure 4: Project Formulation Team, Technical Experts from Karatu District Council in one of technical sessions as part of consultative process conducted in Karatu District Headquarters.

Figure 5: Discussions with Hadzabe (hunters and gatherers) community members

Figure 6: Datoga (blacksmith) young men at work.

Key suggestion and concerns from stakeholders.

- Stakeholders and beneficiaries from Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities, technical staff, from Karatu district council, government ministries, agencies and higher learning institutions indicated factors to be taken into consideration for successful planning and implementation for KARAHADA project:
 - The project must adopt a use a **participatory approach** best practices from design to project implementation. This can be achieved by applying lessons from community experience and local knowledge. This in turn will assist in attaining the main goal of the project "increasing resilient of vulnerable communities at village level".
 - Almost 100% of all stakeholders and individual experts proposed to apply **Force Account Implementation Modality** from the design to implementation stage of this project. Project. The approach is being widely applied by the Government of the United Republic of Tanzania and it has shown success in terms of value for money and project completion rates. This modality is now being adopted by other actors particularly for infrastructure development projects. This modality is viewed as cost effective and creates a sense of community ownership and practical involvement of communities by making themselves available for physical works with modest payments or with no payment and in kind contributions through contribution of building materials such as collection of gravels, sands and willingness for working in groups.
 - The project should be hosted at Karatu district headquarters and use **existing office accommodation** and work with district technical staff together with Haki Kazi Catalyst staff. The Finance should be channeled through a special account guided by the Government Finial Standard Operating Procedures.
 - The District Development Plan (DDP) is a key **local planning process** that the project needs to align with. This could be achieved by locating the project implementation unit at Karatu district and district planners will be part of the Project Steering Committee.
 - Although the entire community at the project site is vulnerable to climate change impacts, the project proposal preparation team and all stakeholders agreed that it was more human and sensible to have **provisions for supporting vulnerable households** who are most vulnerable than others such as youth/ children female headed families, and people with disability and those with special needs.

Stakeholders discussed and analyzed project interventions and pointed that, project components should be addressing climate change risks, particularly on issues related water security and water resources management food security, environmental and ecosystem management, and strengthening community and local government institutions for planning and implementing climate change resilient interventions as urgent needs and priorities. Therefore, they all agreed that;

- The proposed activities/interventions for the project components in the approved full proposal are **urgently needed** and therefore reaffirmed the proposed project components, expected concrete outputs, indicated activities as well as the expected project outcomes.
- For the interventions related to food security and income generating, the stakeholders and direct beneficiaries advised this project to adopt an implementation modality which supports both on farm and off-farm livelihood activities.
- Since Karatu district has in place a plan to diversify livelihood for its community members, stakeholders and district experts agreed that, the proposed interventions under component 2 should consider activities to facilitate availability of traditional and improved seeds and stock.
- For improvement of beekeeping interventions for food security and income generation, stakeholders requested that **modern beehives** are used to increase honey productivity. These bets practices can also be adopted by other neighboring communities.

Table 5: Some perceived challenges and possible solutions for project interventions as thought by the community and Karatu District Council representatives

s/n	Challenge	Solution
1.	Water scarcity and lack of water infrastructure leading to inadequate water supply	 Invest in exploration and invest and extraction of underground water resources Improve water availability through drilling of boreholes and installation water supply system Promote sustainable water use
2.	Food scarcity, food insecurity and Malnutrition	 Provision of humanitarian food support at Village community centres Promote use of traditional and improve crops varieties Promotion of beekeeping practices, Promote climate change – resilient Promote. climate change–resilient livestock practices Such as Poultry and rabbit farming
3.	De forestation	 Mainstream climate change into forest management practices in all villages of Karatu District. Promote alternative livelihoods in villages particularly targeting women and youth groups/the most vulnerable community groups.

		 Awareness on Participatory Forest Management Tree planting Law enforcement
4.	Poor health services	 Enhance capacity of public health care systems. Improve disease surveillance and design of disease – control at health centers and village dispensaries. Improve knowledge of climate change – related occupational health risks. Provision Community Health Insurance
5.	Limited information on climate change, impacts and associated risks including limited knowledge and information of planning with climate change in mind	 creating awareness on climate change Sharing local knowledge and solutions Building strong community institutions Strengthening climate information services mainstreaming climate change District Development Plans
6.	Gender related issues	 Promote gender equity and equality among communities in Karatu to address norms and traditional systems which expose women to struggle mostly with domestic issues and to keep domestic matters of families going. Promote and implement alternative income diversification activities such as beekeeping, poultry farming, local chickens' productions, Fruit tree planting, and home gardens for traditional crops Promote awareness to encourage women and girls to participate in all stages of the projects implementations and meetings

Source: Field Visit 2021

Figure 7: Proposal development team visited one of the caves used by Hadzabe hunters and gatherers

(b) Gender analysis

At the stage of full proposal development, a gender scoping was done. Its findings were analyzed and discussed during consultations with Karatu district council staff and also with other partners working in Karatu. As it is indicated at section 1.2.2 inequality related to gender, exclusion of those with disabilities and income inequality are some of the factors that contribute significantly for vulnerability of women and disabled groups to the current and future climate change impacts and even structural inequality. Such inequality predisposes women and other marginalized groups in Hadzabe (hunters and gatherers) and Datoga

(blacksmith) communities especially widows, subjects vulnerable women and girls to negative, even harmful, coping strategies, including risky behaviors such as transactional sex. The analysis on gender also indicates traditional gender roles in Karatu confer more powers to men over women, but this situation does not relieve women from burdens of house work and looking for food and water. This is mainly due to prevailing social, economic and political barriers. As a result, women constitute approximately 60 percent of rural people living in extreme poverty in Karatu District. The district is, relatively more vulnerable to climate change- induced risks, when compared to approximately only 40% percent for men. In addition, their heavy workload that combines exploitative agriculture, household and domestic works as well as earning from nonfarm activities such as intensive tasks of childcare, fetching water and food from afar distances, as well as food processing in a context where these services are either inadequate or do not exist, are multiple gender disadvantages which trigger the intergenerational transfer of poverty among women groups in the district. Therefore the proposed actions in this project should ensure early sensitization of all key decision-makers and communities to the need for and benefits of women's equal participation in activities of project components; specify targets for female and male participation at meetings and training events in order for the meeting/training to reach quorum, the target for women/men ration should be encouraged to be no less that 50/50 where possible and develop implementation plan which ensures targets for male /female participation in project activities to be at least 40% women. See annex 1 summary on project component and gender analysis

I: Justification for funding requested, focusing on the full cost of adaptation reasoning

Like most of the rural areas in Tanzania, the economy and livelihood system of communities in Karatu district are mainly driven by sensitive sectors. Negative effects due to changing weather seasons and climate variability and change have already disrupted the economy and people's lives in Karatu. Historical degradation of ecological ecosystems and through the ongoing poor livestock and farming practices and climate induced processes adversely affect the existing social-ecological and livelihood systems in the proposed project sites in Karatu district. The current climate trend and the continued global change in the climate system accelerates these effects and calls for adaptation actions in life supporting sectors such as water, agriculture and livestock. The requested funds from Adaptation Fund is viewed to support direct implementation of concrete climate smart innovations and built resilient economy and livelihoods of the people in Baray, Endamaghan and Mang'ola wards, the activities proposed by this project will be implemented to attain project objectives including its expected outputs and outcome to enhance adaptive capacity of marginalized communities in Baray, Endamaghan and Mang'ola wards and to increase their climate resilience to the adverse effects of climate change and variability without any other addition funds apart from the resources from the AFs' resources. The capacity gap relates to financial resources that existed to build concrete climate action in the project sites will be solely well addressed using the requested funds presented in this proposal. However, the resources will be

Component 1: Enhancing integrated climate change resilient livelihood diversification in the selected sites in three wards of Baray, Endamaghan and Mang'ola in Karatu District

Baseline scenario (without AF resources): Without the AF project, rural communities at Baray, Endamaghan and Mang'ola wards in Karatu district will be forced to continue with their traditional hunting, gathering and black smith practices, which are vulnerable to climate change impacts. Limited availability of animals, leaves, seeds fruits and roots due to drought and unpredictable seasons have caused serious food insecurity and famine. Without AF resources, it means that no measures to improve existing livelihood productivity and transformation to climate resilient livelihoods for communities to be more climate resilient in Baray, Endamaghan and Mang'ola wards. This scenario will worsen the situation and the future. If this happened, vulnerable communities especially women will be more pushed into deeper poverty levels.

With AF funding: The requested AF resources will be sufficient to achieve the expected outcome and outputs including the adaptation objectives under this component. AF resources will therefore be used to facilitate improvement of existing livelihood systems and to introduce transformative livelihood systems for communities to be more climate resilient and adaptive to future effect of climate change (including increased mean annual temperatures and increased frequencies and intensity of droughts).

Component 2: Enhancing climate resilient rural water infrastructure and supply system in vulnerable Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities at Baray, Mang'ola and Endamaghang Wards in Karatu District

Baseline scenario (**Without AF resources**): Without the AF Fund, it means that no actions will be taken to implement activities of the component 2 under this project, which means that present and future climate threats will continue to accelerates the existing water scarcity. Observed climate and weather extreme events such as droughts, and prolonged dry periods will continue to destroy livelihoods, notably water supply. In this manner, adaptation failure will be witnessed and the detrimental effects of climate change will be irreversible in the near future. Currently there are sufficient evidences that women in these areas are suffering the most and are now forced to walk longer distances searching for water. Such evidences on water scarcity driven by climate change have instigated increased social groups conflicts such as hunters and gatherers, farmers and livestock keepers including incidents of gender-based violence. Local communities in the project area have a low capacity to

adapt such induced water scarcity due to poverty levels. Moreover, being a developing country; the Tanzania Government has low adaptive scarcity and inadequate financial resources to assist.

With AF Funding: the AF funding will sufficiently facilitate to meeting the expected outputs and adaptation objective of this component,) to enhance climate resilient rural water infrastructure and supply system in vulnerable Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities at Baray, Mang'ola and Endamaghang Wards in Karatu District. Financial resources from the AF will facilitate to build rural climate resilient water supply system adaptive to the current and future climate shocks in these communities and no other funds will be needed to achieve this. The empowerment of community groups, capacity building and the adoption of Force Account Modality and WUAs will provide sustainable supervision, operational, implementation and management arrangements for infrastructures to be developed to withstand the effects of the current and projected future climate change.

Component 3: Improving climate change resilience of forests and non-timber products for selected villages of the three wards of Baray, Endamaghan and Mang'ola in Karatu District

Baseline scenario without AF resources: Over years now, ecological and environmental systems in Baray, Endamaghan and Mang'ola wards have been impaired by both human induced and climate change related drivers. The original and natural ecosystems, covered by savannah thickets were degraded over the past 5-7 decades. There is continued trend of environmental degradation such as poor farming methods, deforestations, charcoal making and overgrazing in the project sites. Unless concrete adaptation approaches which integrate community and ecosystem based solutions to tackle climate change are implemented, the trend will continue with disastrous effect to the vulnerable communities.

The scenario with AF resources: AF resources will be used to implement concrete adaptation activities to enhance integrated management of environmental and forest systems to sustain climate sensitive rural livelihood systems in the project sites. The requested financial resources will therefore be used to establish and implement forest rehabilitation and restoration activities. Beekeeping activities including tree planting and windrows establishment will be sorely supported under this project. AF funds will also be used to facilitate campaigns on planting fruit trees as income generating activities including engaging Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities in tree planting in their camps and homesteads and also around public institutions such as resource centres, schools and health facilities.

Component 4: Promoting climate change resilience of health systems at three wards of Baray, Endamaghan and Mang'ola in Karatu District.

Baseline scenario (without AF resources): Without the AF project, rural communities at Baray, Endamaghan and Mang'ola wards in Karatu district will be forced to continue with their traditional way of using local and traditional medicines for diseases and other ailments. Hadzabe (hunters and gatherers) have limited access to health service because of their livelihood style of moving from one place to another in search of water and food. It is difficult to ascertain the cause of deaths without proper diagnosis. Research shows that the leading causes of death are acute illnesses such as infectious and gastrointestinal diseases which contributed to about 70% of all deaths. About 20% of other deaths are a result of trauma including accidents and violence. These ailments require investigation and specialized treatment. Hunting, Limited availability of animals, leaves, seeds fruits and roots due to drought and unpredictable seasons have caused serious shortage for medicinal plants roots and seeds. Without AF resources, it means that the existing measures do not reach the hunters and gatherers as they don't possess health insurance and emergency health services. If no measures will be put in place the vulnerable communities especially women and will be in danger of losing their lives.

With AF funding: The requested AF resources will be sufficient to achieve the expected outcome and outputs including the adaptation objectives under this component. AF resources will therefore be used to facilitate improvement of existing health systems particularly access to health services through provision of health insurance and emergency health services. The proposed project intends to introduce transformative health services for communities to be more resilient to health related effects of climate change.

Component 5: Enhancing capacity of Karatu District Council and Communities in three wards of Baray, Endamaghan and Mang'ola to design and implement climate change adaptation interventions and improve level of understanding of climate change related issues.

Baseline scenario: without AF resources: At present Karatu district do not have adequate capacity to effectively support implementations and scale up climate adaptation. Without the AF project, it is likely that the pace to integrate adaptation issues into district development plans including and carrying out adaptation actions on ground will be slow and in most cases will be not possible. Without FA resources, vulnerable communities in wards of Baray, Endamaghan and Mang'ola wards in Karatu district are likely to continue with their unsustainable way of life which involves hunting, gathering and blacksmith practices which are also likely to limit their adaptive capacity in future.

With AF resources: Funds from the AF will perfectly be used to promote best practices and lessons in the course of project implementation to be effectively shared and communicated with key stake holders and decision makers in the district and beyond. This will pave a way to upscale and replicate outcomes and results in other places with similar environment. The requested AF resources are sufficient to achieve the expected outputs under this component.

J: Description on how the sustainability of the project outcomes has been taken into account when designing the project

The project's sustainability will be supported by emphasizing the active participation and other stakeholders in decision making and implementation of the project's activities and strengthening the institutional and technical capacity at community and district levels to ensure that stakeholders have adequate knowledge and skill to maintain the benefits of the project's interventions firmly in the local communities. By engaging, communities in the design and implementation of the project and creating WUAs and Cooperative societies and community groups Farmers/ beekeepers /livestock/tree planting Groups and community based enterprises; the KARAHADA project will empower and build capacity of local people to continue sharing local knowledge and adapting to climate change risks. Community ownership will also ensure that the environmental gains are not reversed. The proposed investment matches with government priorities set out in key national policy documents including the vision 2025, the third five years development plan, National Climate Change Response Plan strategic plan of Karatu District Council and the NAPA. Alignment with national priorities ensures Government commitment to project objectives during and beyond implementation. The operation of the project at the district authority headquarters will also ensure that district sectors and village level governments play a central role in terms of project implementation and ensuring sustainability through the irrigation of adaptation plans into district performance contracts to institutionalize and sustain community interventions.

The use of community animators to deliver project interventions will demonstrate the project's commitment to investing in local people and recognition that community members are best placed to lead the project implementation at the community level. The proposed components and interventions are rooted in the sectors that touch everyday life of communities in Karatu. By supporting adaptation measures to improve resilience to long-term and more sustainable solution to rural and vulnerable communities.

The proposed collective action, opportunities best practices, knowledge-sharing and communicating project outputs among departments, across sectors, districts and regions, and village communities in the district is viewed to accrue a disproportionately large benefit for life and livelihood quality improvement under the current and the expected future climate change effects, vis-à-vis the traditional and existing way of

implementing development/adaptation projects using dis-integrated and isolated projects in the district.

The project will be implemented through the existing strong district institutions and village government structures by implementing their respective activities. Conduct technical trainings of trainers (TOTs) on maintenance and operation to selected communities members to ensure operations and maintenance of infrastructures beyond the project life time. For instance, activities under component 2 will also include training of selected members of Water Users Associations (WUAs) on operation and maintenance, revenue collection, group dynamics, accounting and financial management to ensure sustainability. Activities under component 1 and 5 will involve training of selected farmers on Farmer Field School (FFS) at Baray, Endamaghan and Mang'ola wards.

Equally, self - selected beekeepers will be trained on their maintenance and operation issues. For instance, it is designed here that, no beehives will be purchased for communities, rather experts and necessary workshop tools and equipments will be purchased and community members will be equipped with practical knowledge on modern beehives and honey processing techniques, including maintenance and operations. Activities under component 3 will also promote sustainable environmental and forest management including tree planting. The proposed investment corresponds with Government priorities set out in the District Strategic Development Plan for Karatu District. The Secretariat Strategic Development plan (2016/2021) being implemented 6 District Authorities including Karatu District, key national policy documents including the vision 2025, the third Five Years Development Plan (2021/2022- 2025/2026), climate change response strategy 2021, NDCs 2021 and the NAPA 2007.

Alignment with national priorities ensures government commitment to project objectives during and beyond implementation. The operation of project through the District Authority Headquarters will also ensure that District, sector users at the district and village level and the regional governments play a central role in terms of project implementation and ensuring sustainability through the integration of adaptation plans into District and village plans to institutionalize and sustain community interventions. This provides greater opportunity for regional government in Arusha and Central government to scale up the project outcomes after phasing out of the AF funding and interventions, through sharing and communications of the lessons learned.

K: Provide an overview of the environmental and social impacts and risks identified as being relevant to the project.

Table 6: Summary of identified environmental, social and safety issues.

PART III: IMPLEMENTATIONARRANGEMENTS

PART IIIA: Project Management Arrangements

The National Implementing Entity (NIE):

The project will be implemented by the National Environment Management Council (NEMC). NEMC has a significant experience in implementing projects and programs of this nature, with dedicated groups/unit for climate change adaptation and executions of the NIE mandate relate to the AF operations in the United Republic of Tanzania. The following are the implementation services that will be provided by NEMC under this project:

- Overall coordination and management of NIE functions and responsibilities
- Facilitate interactions with AF secretariat and other related stakeholders at global scales
- Oversight of project implementations and reporting on budget performance
- Quality assurance and accountability for outputs and delivery during project development, implementation and on completion phase;
- Receipt, management and disbursement of the AF's funds in accordance with the financial standards of the AF:
- ➤ Oversight and quality assurance of evaluation processes for project performance and ensuring that lessons learned/ best practices are incorporated to improve future projects in the United Republic of Tanzania; and
- General administration and support costs including legal services, procurement and supply management, IT and human resources management

The Executing Entities: Karatu District Council and

Karatu District Council and Haki Kazi Catalyst (HKC) will be the overall coordinators of the project, through the services of a project management unit (PMU), which will be staffed with a project coordinator, an assistant project coordinator, a project driver and a project accountant are referred here as project personnel and will be sourced from the existing staff within Karatu district council except the project coordinator will be sourced within the existing staff within NEMC. Strong participation of other District staff will be at project implementation level as activities involve cross- sectoral coordination. A project steering committee of Karatu District Council. The secretariat of the committee will be the PMU through the District Executive Director (DED) and the Executive Director of HKC. The members of project steering committee will be the DED of Karatu District Council, District Planning Officer, one representative from each of the following sector ministries: ministry responsible for Local governments, the ministry responsible for livestock, ministry responsible for agriculture, the ministry responsible for environment and climate change, the ministry responsible for forestry and natural resources. Other members will be an officer from the National Environmental Management Council (NEMC), one member from HKC, one from Tanzania Meteorological Agency, one member from RUWASA Karatu. Heads of

Departments from Karatu District Council and HKC will be invitees. The following table presents the list of proposed project partners.

Table 7; Summary of analysis of possible project partners.

STAKEHOLDERS	RESPONSIBILITIES
PRSIDENT'S OFFICE REGIONAL ADMINISTARTION AND LOCAL GOVERNMENT(PORALG)	PORALG is mandated for Administration and Management of Regional Secretariats and Local government Authorities. PORALG will be responsible for Coordination of Regional and District Climate Change Interventions. PORALG will be part
NUCE PRESIDENTIA	of the Steering Committee
VICE PRESIDENT'S OFFICE (VPO)	The Vice President's Office and the NDA to the Adaptation Fund and is the Focal Point to the UNFCCC. The VPO is also responsible for coordination and overseer of all climate
	change activities in Tanzania. Thus this project will use the VPO to ensure its implementation which contributes to the objectives articulated in the climate change strategy, NDCs, NAP and NAPA documents. VPO will chair the Steering Committee
	MoF will be responsible to ensure all project components and
PLANNING	in-line with national development plans, visions and strategies. MoF will be part of the Project Steering Committee.
MINISTRY OF WATER	MW is responsible for water supply, water resources management and irrigation issues. This project will utilize.MW will be part of the Project Steering Committee
MINISTRY OF AGRICULTURE(MoA)	MoA is responsible for agriculture development issues in Karatu. All agricultural related activities will be implemented under MoAs guidance. MoA will be part of the Project Steering Committee
MINISTRY OF LIVESTOCK ANDFISHERIES DEVELOPMENT (MOLF)	1 7 1
ARUSHA REGIONAL ADMINISTRATION SECRETARIAT (RAS) OFFICE	Arusha Regional Administration Secretariat (RAS) office widely involved in a project design will be involved in the implementations and providing policy guidance to the management unit of the project. RAS will be part of the Project Steering Committee and various reports during the designing and implementations will be communicated to the RAS.
TANZANIA METEOROLOGICAL AGENCY (TMA)	Responsible for weather and climate related information, and will be key stake holder during the implementation and post implementation stages of the project. TMA will be part of the Project Steering Committee

STAKEHOLDERS	RESPONSIBILITIES
TANZANIA FOREST SERVICE AGENCY (TFS)	Tanzania forest service agency is seen as a potential and strategic stakeholder for tree planting, afforestation and ecological rehabilitation and restoration activities. TFS will be part of the Steering Committee.
	This is National Authority responsible for water supply in rural areas; RUWASA is a technical arm of the government for management and development of water supply infrastructures in rural areas. RUWASA in KARATU will be responsible to implement some activities related to underground water drilling and supply system activities.
HAKI KAZI CATALYST	Haki Kazi Catalyst is a key stakeholder for providing training and support for Karatu District Council. They have experience of building community institutions amongst Nothern highlands tribes. They have worked in Karatu district in other projects. HKC will be part of the steering committee
LAKE EYASI OPEN SCHOOL AND HELP OTHER PEOPLE TO EXCEL TANZANIA FOUNDATION	This school offers integrated Post primary Education (IPPE) through Open and distance learning will be a key stakeholder in provision of training to communities. It will be used for tailor made courses as agreed by communities and stakeholders. The school has learning facilities and accommodation and provides health services to communities within lake Eyasi and beyond.
LOCAL NGOS, SOCIAL GROUPS AND CBOs	Non-governmental organizations, community-based organization are very few in number, and most of them are not active. However, few of them such as World Vision and Convoy of Hope operates in the project area. Informal and community-based organizations such as farmers, livestock and other social organizations exist in Karatu. These are key partners for developing and operate to the project. Additionally, are key beneficially of results and outcomes of the project.
PRIVATE SECTOR PARASTATAL AND GOVERNMENT AGENCIES.	1 7

STAKEHOLDERS	RESPONSIBILITIES
DIRECT BENEFICIARIES	Direct beneficiaries of the KARAHADA project are the vulnerable and marginalized communities in Karatu district, Particularly Hadzabe (hunters and gatheres) and Datoga (blacksmith) communities. These are key stakeholders and will be widely involved widely during plan, implementation and monitoring of the KARAHADA project.

Project Management Unit:

The project Management unit will be established and hosted at the headquarters of the Karatu District Council, which will be responsible for day to day management of the project activities and facilitate stakeholders and engagement. The PMU will be comprised with full time Project Coordinator (PC), full time M & E officer, full time financial and accountant (FA) and full-time driver and personal secretary (PS). The project coordinator main responsibility is to ensure that the project produces the results specified in the project document to the required standard of quality and within the specified constraints of time and cost. The annual work plan is prepared by the project coordinator, presented to the District Executive Director (DED) and to the HKC management and approved by the Project Steering Committee. However, NEMC will be in the steering committee to ensure its quality assurance role, provides and be part of the final approval. The project coordinator is also responsible for managing and monitoring the project risks initially identified and submit new risks to the Project Steering Committee for consideration and decision on possible actions if required and updates the status of these risks by maintaining the project risks log according to the AFs guidelines. The key functions of the PC will be the following:

- Oversee and manage project implementation, monitor work progress, and ensure delivery
 of outputs and within the specified constraints of time and cost as outlined in the project
 document.
- Report to Karatu district / HKC and PSC regarding project progress
- Develop and facilitate implementation of a comprehensive monitoring and reporting system
- Ensure timely preparation of detailed annual work plans and budgets for approval by the PSC
- Assist in the identification, selection of consultants and other experts as required;
- Supervise, coordinate and facilitate the work of the administrative/ technical team (consisting of the assistant coordinator, finance/ administration staff and consultants)
- Provide input to management and technical reports, and other documents as described in

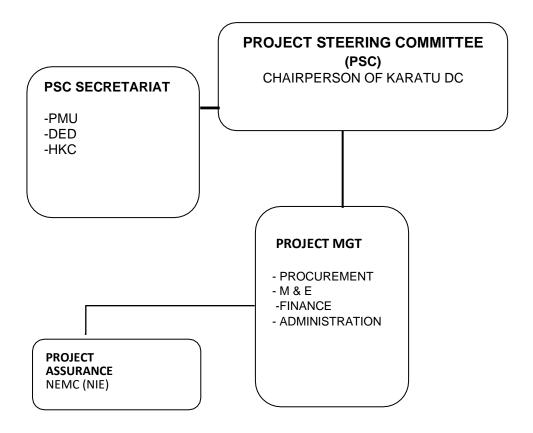

the M & E plan for the overall project. Reports should contain assessments of the progress in implementing activities, including reasons for delays, if any and recommendations on necessary improvements.

- Inform the Karatu district Authorities/ HKC and PSC without delay of any issue or risk which might jeopardize the success of the project.
- Liaise and coordinate with NEMC on a regular basis

See Annex 3 for the summarized Terms of reference of the PC

Because most activities are field work and will involve extensive services and training on FFS and FFFS, purchasing one field vehicle will be necessary in order to ensure that the PMU has required capacity to monitor and supervise project activities.

Figure 8: The management arrangements for the project are summarized in the chart below.

PART IIIB: Describe the measures for financial and project risk management.

a) Financial and project risk management

Describe the measures for financial and project risk management

The project anticipates various risks during the implementation phase as summarized in table 9. Strict precautionary measures for the identified financial and project risk management have been formulated to force those risks before they open. The risk categories are related to delayed time for project implementations and conflict management are pertinent risks of the proposed project. These are rated low, but those risks related with limited stake holder's involvement and natural and environment hazards are rated low to medium.

Table 8: Risks and management measures.

S/No	Identified Risks	Level of Risk	Mitigation Measures
		-Low - L -Medium - M - High-H	
1	Competing interests between different stakeholders regarding accessing and use of project benefits and related resources		Establish multi-stakeholders' forum to discuss and deliberate on accessing and us e of project benefits and related resources
2	Local communities with limited participation and willingness to promote project initiatives		Increase awareness campaign about the importance of communities at village community levels to actively participate and own the project, working with available set up of village government and community structures, active involvement of community organizations in project implementation
3	High expectations for quick investments on the ground and resources beyond the available project resources		Continue with awareness raising campaign to foster more understanding about the project objectives and activities under the components and implementation arrangements
4	Project financial management	L	The project will have clear separation of roles and strengthen accountability and auditing
5	Delay in project implementation due to government bureaucracy, long and inefficient procurement processes		Detailed Implementation Plans (DIPs) and Project Annual Plans (PAP) will be developed and be approved by both the Project Steering Committee (PSC) and National Implementing Entity (NIE). The project monitoring and evaluation plan will also be developed and implemented effectively. Developing a procurement plan and use flexible procedures under HKC and

			Negotiate with Government at Karatu district to get special treatment that can fast-truck implementation
6	Limited Stakeholders Involvement	L	All stakeholders were widely involved in all phases of the project from early stages of the project design, and will continue to be involved during implementation, monitoring and evaluation.
			Involvement of key stakeholders at community level and inclusion of marginalized communities and groups such as women, local leaders, and community beneficiaries, Karatu DC and other public service organizations will facilitate to mitigating any risks related to stakeholders' involvement.
7	Low adoption rate of proposed innovations and adaptation technologies by communities	M	Promotion and demonstration of new technologies and practices
8	Financial Risk	L	There are clear financial management structures in the district that will be followed. These structures follow national laws and regulations governing public financial expenditures and transactions. Therefore, this project will adhere to all Generally Acceptable Accounting Principles (GAAP) regarding control, transparency and documentation, and have procedures and necessary infrastructure in place for an appropriate audit system by the Office of Auditor General or any other internationally accepted auditing firm.

			Approved regulations, procedures and guidelines on costs for services & goods of the United Republic of Tanzania including the Adaptation Fund Standards will be strictly followed
9	Conflict Management	L	Although it is not expected that any conflict will rise during implementation of this project, the NIE management and conflict resolution structure/mechanism and its oversight and support role will be followed and respected to management any unforeseen conflict which may rise during lifetime of the project phases. Additionally, the PSC and the PMU will put strong early warning structure to foresee and management both financial and management risks before they happen

PART IIIC: Describe the measures for environmental and social risk management, in line with the Environmental and Social Policy and Gender Policy of the Adaptation Fund.

Environmental and social impacts and risks have been identified for the proposed project (Section II K). Following this, a broader view of Environmental and Social Management Plan (ESMP) for the proposed project will be developed in collaboration with relevant stakeholders and authorities including NEMC Further detailed ESMP for anticipated intervention will be formulated during the inception workshop.

Table 9: Anticipated Environmental and Social impacts and risks management

Environmental and social principle	Identified potential impacts and risks	Level (H, M, L)	Mitigation measures
Compliance with the law	Some activities under component 1 and 2 which are currently not fully itemized/ designed there might be a risk that such activities will not comply with certain laws	L	Environmental and Social Management Plan (ESMP) will be prepared and will be adhered to monitor implementations of on the ground concrete activities such as water supply and micro-irrigation
Access and equity	Given that the beneficiaries are rural people and marginalized poor families who are not often integrated in the village politics and decision-making processes, there could be a risk of insufficient access of the project resources by these people	L	Clear and transparent criteria have been put in place including selection of participants the trainings ad workshop. Measures have been put in place to enable this project to closely monitor all targeted beneficiaries to assure equal access of men, women, youth and the most vulnerable groups. Indicators in this regard will be included in the monitoring and evaluation plan
Marginalized and Vulnerable Groups	It is probable that project activities may exclude marginalized/ and vulnerable groups at various project sites or may have insufficient access to project resources and total involvement to execute project activities dur ing implementations thus preventing them from accessing benefits – both in terms of resources and trainings	M	The prepared ESMP will be followed and monitored strongly during the implementation of all interventions to ensure all marginalized and vulnerable groups have adequate access to and benefit from the project interventions. In addition, the project design has ensured that benefits accruing from the project interventions – including technology transfer and awareness-raising activities – reach marginalized and vulnerable groups in the rural villages. The design of this project ensures that all components enhance the adaptive capacity of

		lized and including	vulnerable

			Transforming their social life to better levels especially for women and girls				
Human rights	Project objectives promote basic human rights for equitable access to service and safe drinking water, access to food and quality and health environment	N/A	The proposed project respect and adhere to all relevant convections on human rights, national and local laws in relation to human rights				
Gender equity and women's empowerment	It is likely that women will be inadequately represented during the implementation of this project, thus making the project not benefiting men and women equally	include % ratio for consideration implementation of all activities under the components. Fair and e selection of beneficiaries done and a list of all beneficiaried and monitore PMU and NIE on quarter					
Core labor rights	There is a possibility of communities/ beneficiaries who will be involved to implement activities using force account modality components 1, 2 and 3, to be exposed to the risk of minor and unforeseen accidents	L	The PMU will ensure compliance with the National and international labor laws and standards required relevant protection gears will be adequately provided				
Indigenous peoples	According to Tanzania laws, there are no indigenous people identified in the proposed project sites	N/A	ESMP will be monitored to ensure equitable access to project benefits and resources by local people and to the most extent communities at grass- root and relevant marginalized community groups are included in community consultation and during participatory planning activities				

Involuntary	No identified risk	N/A	The project design does not
resettlement			include voluntary or any
			involuntary resettlement
Protection of	There is a low risk that the	L	ESMP has been prepared to
natural habitats	interventions of concrete		monitor executions of such
	adaptation actions such as		interventions. Activity based
	boreholes, rural water		resettlement will be conducted
	supply network, water tanks		during implementation phase
	and micro- irrigation system		
	could result in destruction		
	of small areas of natural		
	habitat.		
Conservation	Execution of concrete	L	ESMP has been prepared to
of Biological	adaptation actions under		guide and monitor executions of
Diversity	components 1, 2 and 3 may		such interventions. Activity based

	Result in negative impacts biodiversity	S	Mitigation measures has also been developed under the ESMP to be followed during the implementations
Climate change	No identified risk	N/A	None of the project activities will enhance significant emissions of green house gases
Pollution prevention and resource efficiency	No identified risk	N/A	The proposed project is visualized to cause no any harm or pollution.
Public health	No identified risk	N/A	The proposed project enhances the quality of public health. Indeed, through components 1, 2 and 3, contribution of this project to the general public health is clear. During the implementation of the project awareness rising activities will be undertaken on malnutrition related diseases, malaria and water related diseases including cholera and promote WASH issues through implementation of activities under component 1, 2, 3 and 4.
Physical and cultural heritage	None anticipated	N/A	No physical and cultural heritage sites which exists in the project sites
Lands and soil conservation	None anticipated	N/A	The ESMP recognized that, most of activities of this project is designed to enhance and promote conservation of soil and land resources. The continued degradation of the land resources will be reserved through small interventions for components 2 and 3

It should be clearly understood that, this project is designed in consistence with Environmental and Social Policy of the Adaptation Fund. However, the proposed activities will be reassessed and monitored as per the ESMP at every stage for potential social and environmental risks to ensure

that potential adverse impacts are avoided, or where avoidance is not possible, minimized, mitigated, and managed. Although the AF's Environmental and Social Policy, a project can be categorized as either A, B or C, it has been revealed by initial discussions that, this project is unlikely to pose any significant adverse social and environment impacts. The already identified social and environmental risks are expected to be localized and minimal as most of proposed interventions are largely considered "green". Thus, this project is classified to be under Category B in the classification of the AF's Environmental and Social Policy.

Grievance mechanism

Grievance mechanisms are proven tools in helping institutions minimise harm to communities and ecosystems by protecting the existing rights, obligations and standards. The proposed project has included a mechanism to manage conflicts/grievances. The Project will utilize the existing grievance mechanism in the United Republic of Tanzania to allow affected to raise concerns that the Project is not complying with its social or environmental policies or commitments. It will be the responsibility of the Project Coordinator, PMU and the Karatu District Council/HKC to ensure that all relevant stakeholders are adequately informed of the grievance mechanism.

The United Republic of Tanzania has established grievance mechanism through the Employment and Labor Relation Act, 2004 and the Environmental Management Act, 2004 through the Environmental Impact Assessment (EIA) and Environmental Audit (EA) Regulation (2005) for all climate change related projects. Environmental Impact Assessment (EIA) and Environmental Audit (EA) Regulation (2005) inform and guide all Actors and persons affected by any projects on bringing forward and responding to stakeholder concerns.

In this regard, the Project Manager/executing partners (in this project the PMU at Karatu District Council Headquarters) are usually the first point of contact for any project-related complaints from stakeholders. The Project Manager and project team should respond promptly and appropriately to a complaint with the goal of avoiding escalation to the Higher Authorities for Stakeholder Safeguard- related Response.

The Project Coordinator can direct the complainants to write a letter explaining through relevant organs established from the village levels. The concerns cam be submitted it to the District Executive Director' Office for Stakeholder Safeguard-related Response if the issues cannot be resolved at the project level. The PCr should advise complainants to provide complete information, so that the DED's Office can properly assess and address the complaint. If the DED's Office for Stakeholder Safeguard- related Response finds that the complaint is eligible, s/he forms a team composed of internal experts to investigate the case and propose options for the complainant to consider.

PART III D: Description of the monitoring and evaluation arrangements and provide a budgeted M&E plan, in compliance with the ESP and the Gender Policy of the Adaptation Fund.

The project will comply with formal guidelines, protocols and toolkits for quality assurance issued by

the AF and NEMC. NEMC will develop a supervision plan during the projects inception phase which will be distributed and presented to all stakeholders during the inception workshop. The emphasis of the supervision plan will be an outcome monitoring, learning and sustainability and financial management. Project risks and assumptions will be regularly monitored by NEMC. Risk assessments and rating will be an integral part of the project implementation Review (PIR). The quality of the projects M& E will also be reviewed and rated as part of the PIR. Appropriate financial parameters will be monitored semi- annually to ensure the cost-effective use of financial resources.

An independent final evaluation will take place three months prior to the project's end date in accordance with the available guidance of NEMC as the NIE. The final evaluation will focus on the delivery of the project's results as initially planned- and as corrected after the mid-term evaluation, if any such correction took place. The final evaluation will assess the impact and sustainability of results, including their contribution to capacity development and the achievement of adaptation benefits. Both expected and un expected impacts will be investigated to inform the situation before and after project implementation.

An annual project progress review (PPR) will be undertaken and its results will be used for improving planned activities for the next financial year and phase. PPR will be prepared to monitor progress made since the project's start and in particular for the previous reporting period. The annual reviews will cover performance, outcome and output of the activities. Generally, the PPR will include but is not limited to reporting on the following

- Progress on the projects' objectives and outcomes each with indicators, baseline date and end -of project targets (cumulative);
- Project outputs delivered per project outcome (annual)
- Lessons learned/good practice
- Annual work plan and expenditure reports; and
- Project risks and adaptive management

Quantitative and qualitative approaches will be used for quantification and qualification of information gathered. A solid monitoring and evaluating system will be put in place and will base on the indicators and means of verification defined in results framework. Monitoring and evaluation system will be linked to results framework, annual work plans and budgets. In addition the project will commission an audit (to be certified auditor) of project accounts to ensure compliance with the AF and the government rules and procedures. Table 11 summarizes the budget of the M &E plan

Table 10. Project monitoring and evaluation work plan and budget

Activity	Responsibility	Budget	Budget Timeframe										Notes

T	otal M 8	& E cos	sts		71,000							

PART 111 E: Include a results framework for the project proposal, including milestones, targets and indicators, including one or more core outcome indicators of the Adaptation Fund Results Framework, and in compliance with the Gender Policy of the Adaptation Fund.

The results framework of the project defines success indicators for project implementation and the respective means of verification. A monitoring and evaluation system for the project will be established, based on the indicators and means of the means verification, will be confirmed during the launching event expected in October 2022

Any changes to be done to the results framework will require approval by the Project Steering Committee. The inception workshop is crucial for enhancing understanding of the projects and its implementation, building ownership for project results and agreeing modalities of project execution, documenting mutual agreement for proposed execution arrangements amongst stake holders and beneficiaries.

Subject: Endorsement for Karatu Climate Resilience and Adaptation Project for Hadzabe and Datoga Communities (KARAHADA)

In my capacity as designated authority for the Adaptation Fund in United Republic of Tanzania, I confirm that the above national project proposal is in accordance with the government's national priorities in implementing adaptation activities to reduce adverse impacts of, and risks, posed by climate change in the country.

Accordingly, I am pleased to endorse the above project proposal with support from the Adaptation Fund. If approved, the project will be implemented by National Environment Management Council (NEMC) and executed by Hakikazi Catalyst in collaboration with Karatu District Council.

Sincerely.

Mohammed Khamis Abdulla Deputy Permanent Secretary, Vice President's Office

Annex 2: Summary of gender analysis against project components

Project Component	Gender Risks/Challenges	Proposed mitigation	Benefit s
-		strategies	
1. Enhancing climate resilient rural water infrastructure and supply system in vulnerable Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities at Baray, Mang'ola and EndamaghangWar ds in Karatu District	 Climate induced challenges related to water scarcity are forcing people (more often women and children) to travel longer distances looking for unsafe water The existing un-protected traditional wells in villages wards expose mostly children and women mostly to water borne diseases especially cholera and dysentery when compared to men. Gender based conflicts including incidents of abandonment or separation of couples linked to climate change issues such as water scarcity and food shortage 	Proper guidelines to establish gender sensitive water governance system to guide representation of women, youth and vulnerable groups in the village water management institutional structure Enable improved access to rural water supply systems and technologies	 Gender sensitive water management institutional structures strengthened /established

5. Enhancing integrated climate change resilient livelihood diversification system in the selected sites in three wards of Baray, Endamaghan and Mang'ola in Karatu District	 Low level of representation of gender groups in water management system as the current system in the district is dominated by men. Low adoption rates of the transformative agricultural interventions by all gender groups 	Proper guideline for selection members of farmer and women groups Improve knowledge on	Enable improved access to Agricultural tools and technologies with aim of transforming exploitive their
District			

	 Elites hijacking the transformative and climate sensitive agricultural interventions Women and children especially orphans suffer the most and are morevulnerable to food insecurity whenever crop failure happened due to drought and prolonged dry spell periods when compared to men 	best farming practices and transform traditional farming system through solid farmers tailored trainings using Farmer Field School Approach and smart micro-irrigation practices	 Establish women based gardens and poultry houses and trainings on FFFS (Female Farmer Field School) provision of seeds and tools to diversity gender basedlivelihood systems Increased use of climate smart crops and promoting intercropping with drought resistant varieties like, sunflower, si, cassava, cereals, sweet potatoes and early maturing crops to increase resilience farming systems
Improving climate change resilience of forests and non-timber products for selected villages of the three wards of Baray, Endamaghan and Mang'ola in Karatu District	 Inactive and low participation of women and girls in ecological and environmental based activities and ecological based income generating activities especially marginalization of Women, youth and vulnerable 	Clear guidelines and by laws on management of the environment and village ecosystems Ensure that all groups are equally represented on managing ecological and environmental quality and involved in	Increased alternative income generating options, contributing to reduction of income poverty and building climate

	groups	restorationactivities Proper and inclusive criteria for selection of beneficiaries to ensure 50% of all people involved to implement activities under this component are women	resilience of vulnerable communities specially women and girls
4. Promoting climate change resilience of health systems at three wards of Baray, Endamaghan and Mang'ola in Karatu District			
5. Enhancing capacity of Karatu District Council and Communities in three wards of Baray, Endamaghan and Mang'ola to design and implement	political barriers that limit women to actively engage in climate change adaptation activities which make them to suffer the most whenever climate calamities happen Low participation by vulnerable	Proper guidelines on participation of vulnerable groups in capacity building and other project activities will be put in place and adhered to ensure selection of at least 45%	Improved knowledge of village communities, technical staff in Karatu District Council and civil societies on climate change, its impacts and adaptation strategies

Annex 4: Proposed Terms of Reference for KARAHADA Project Coordinator.

1. Introduction

Karatu District Council and Haki Kazi Catalyst HKC through NEMC are implementing the project titled "Karatu Climate Resilient and Adaptation project for Hadzabe and Datoga Communities" (KARAHADA) project funded by the

Adaptation Fund (AF). This project will be implemented for three (3) years. The project seeks to reduce the vulnerability of Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities in Karatu district to climate change, focusing on the five key issues, water scarcity, tourism, forest restoration, diversified livelihoods and good governance. Climate change in Karatu is manifested in increased mean annual temperatures and increased variability in rainfall patterns. Climate change projections predict that mean annual temperatures will continue to increase in the district and that variability in rainfall patterns will be exacerbated. Over the past decades, the seasons appear to have been reduced in number of days and patterns, such that what was termed as good seasons has disappeared. Currently, experience shows that seasons are progressively being replaced by a more simplified pattern of events whose characteristics are predominantly hot (hotter) and wet. Rains are more erratic, coming at unexpected times in and out of the seasons. In particular, there is less predictability as to the start of rainy seasons. In most cases rainy seasons are shorter. Dry periods have increased in length and drought is more common. With recognizable seasons, unusual and "unseasonable" events are occurring more frequently, including heavy rains in dry seasons, dry spells in rainy seasons, and storms at unusual times and temperature fluctuations. It is now common to witness rains which are more violent and intense and punctuated by longer dry spells within the rainy seasons. The impacts of such shift in seasonality and climate trends, have already severely disrupted food availability, led to the displacement of communities, loss of life and assets, and caused an overall reduction of community resilience.

The project will increase climate resilience of rural communities and will therefore reduce the impacts of climate change for communities in Karatu district particularly in Baray, Endamaghan and Mang'ola wards. This will be achieved through implementation of integrated concrete adaptation measures covering the following sectors: water, agriculture, livestock and forest management. In this way the project will adopt a comprehensive integrated approach in order to tackle the multiple effects of climate change as well as to enhance the population's adaptive capacity through the following five components:

- (i) Enhancing integrated climate change resilient livelihood diversification system in the selected sites in three wards of Baray, Endamaghan and Mang'ola in Karatu District
- (ii) Enhancing climate resilient rural water infrastructure and supply system in vulnerable Hadzabe (hunters and gatherers) and Datoga (blacksmith) communities at Baray, Mang'ola and Endamaghan Wards in Karatu District
- (iii) Improving climate change resilience of forests and non-timber products for selected villages of the three wards of Baray, Endamaghan and Mang'ola in Karatu District
- (iv) Promoting climate change resilience of health systems at three wards of Baray, Endamaghan and Mang'ola in Karatu District
- (v) Enhancing capacity of Karatu District Council and Communities in three wards of

Baray, Endamaghan and Mang'ola to design and implement climate change adaptation interventions and improve level of understanding of climate change related issues

2. Objectives of the Assignment

The objectives of the project coordinator will be to ensure well coordinated and effectively implemented project within the Tanzanian context but taking into account AFs financial management rules. The PC will be responsible for the overall management of the project, including the mobilization of all project inputs and the supervision of project inputs and the supervision of the project staff, consultants and sub contractors. The PC will report to the District Executive Director (DED) for day to day project activities and for all of the projects substantive and administrative issues. From the strategic point of view will report on a periodic basis to the Project Steering Committee. The PC will perform a role with relevant district technical departments, NEMC implementing partners (activity/ sub project contractors) and other stakeholders. Additional details are in the approved project document.

3. Duties and Responsibilities

The project coordinator (PC) will lead the project team and provide overall operational management for the successful execution and implementation of the project. The PC has the daily responsibility for management, coordination and supervision of the implementation of the project and delivery of the result in accordance with the full project proposal and agreed work plans. The PC will report to the Project Steering Committee (PSC). The responsibilities of the PM will include the following:

- Oversee and manage project implementation, monitor work progress and ensure delivery of output and within the specified constraints of time and cost outlined in the project document.
- Report to Karatu District/ HKC and PSC regarding project progress.
- Developandfacilitateimplementationofacomprehensivemonitoringandreporti ngsystem.
- Ensure timely preparation of detailed annual work plans and budgets for approval by the PSC.
- Assist in the identification, selection of consultants and other experts as required.
- Supervise, coordinate and facilitate the work of the administrative/ technical team (consisting of the assistant coordinator, finance/ administration staff and consultants).
- Control expenditures and assure adequate management of resources.
- Establish linkages and networks with on-going activities by other government and non- government agencies in the United Republic of Tanzania.

- Provide input to management and technical reports, and other documents as described in the M & E plan for the overall project. Reports should contain assessments of progress in implementing activities, including reasons for delays and recommendations necessary improvements.
- Inform the Karatu District Authorities/ HKC and PSC, without delay, of any issue or risk which might jeopardize the success of the project.
- Liaise and coordinate with NEMC on a regular basis.

4. Qualifications and experience

- Master's degree in environment and natural resource management, agriculture, climate change adaptation or a closely related discipline.
- A minimum of 10 years' relevant working experience with 5 years specific experience in climate change adaptation projects.
- Demonstrated solid knowledge of climate change adaptation management techniques, practices and technologies.
- Demonstrated solid knowledge of environment and ecological restoration with an emphasis on water resource management.
- Experience in the public participation and development process associated with environmental and sustainable development and asset.
- Demonstrated working experience with Adaptation Fund or other similar donor funded projects.

Skills and competencies:

- Experience in working and collaborating within governments is an asset.
- Effective communication skills both written and oral in English.
- Creative and in dependent report writing skills and ability to structure persuasive arguments in a diplomatic way is highly desirable.
- Excellent interpersonal skills
- Strong IT skills and should be computer literate in MS Office and project management software
- Strong team leadership skills.
- Good moderating skills (in workshops, facilitation and policy making skills), presentation (I high level meeting), communication (with flair and enthusiasm), in project and time management advisory skills and experience in empirical work.
- Ability to build consensus, collaboration and maintain effective working relationships within internal and external stakeholders, at all levels including in an international and cross- cultural context.

Annex 4: Karatu district profile.

THE UNITED REPUBLIC OF TANZANIA PRESIDENT'S OFFICE REGIONAL ADMINISTRATION AND LOCAL GOVERNMENT

KARATU DISTRICT COUNCIL

PROFILE 2017/18-2021/22

Prepared by:

District Executive Director Karatu District Council Po Box 190, KARATU ARUSHA Telephone No. +255 27 2534047

Fax No: +255 27 2534300

History.

Karatu District Council is one of the seven Councils in Arusha Region. It became an administrative council in 1997. The Council was officially registered in 2000 after general election. The District headquarter is located at Karatu town which is 150 km from Arusha city. The road from Arusha via Karatu to Mwanza and Musoma passes through the town which makes Karatu town active business centre.

The district is located South of the Equator between Latitudes 3°10'4°00'Sand Longitudes 34°47'E-35°56'E. The district is bordered by Mbulu District to the South, Iramba and Meatu Districts to the North West, Ngorongoro to the North and Monduli District and Babati District to the South East.

1.2. Land area

The District is estimated to have an area of approximately 3,300 square kilometers, with Lake Eyasi occupying about 10.6 square kilometers.

1.3 Administrative Structure

Karatu District is divided into four divisions (Mbulumbulu, Eyasi, Karatu and Endabash) with 14 wards, 58 registered villages. 5 Villages are allocated within the Karatu Town Authority

The mandate, roles and functions of the KDC

Karatu District Council was established with effect from the 2000 vide a certificate of establishment under the terms of the provisions of sections 8 sub-section (7) of the Local Government Act, 1982. The KDC functions as provided by the Local Government Act No. 8 of 1982 are:

- i. To maintain and facilitate the maintenance of peace, order and good government within its area of jurisdiction
- ii. To promote the social welfare and economic well-being for all persons within its area of jurisdiction
- iii. Subject to the national policy and plans for rural and urban development; to further the social and economic development of its area of jurisdiction
- iv. To take necessary measures to protect and enhance the environment in order to promote sustainable development
- v. To give effect to the meaningful decentralization in political, financial and administrative matters relating to the functions, powers, Development Plan (FYDP) possibilities and services of all levels of local government authorities
- vi. To promote and ensure democratic participation in and control of decision making by people concerned; and
 - vii.To establish and maintain reliable sources of revenue and other resources enabling local government authorities to perform other functions effectively and to enhance financial accountability of local government authorities, their members and employees.

1.4. Demography/Population

Karatu District is divided into four divisions (Mbulumbulu, Eyasi, Karatu and Endabash), 14 wards and 58 registered villages. The Council is currently having a population of 256,838 of which 131,417 being males and 125,422 females and 48,345 households as per 2012 Census. The District birth rate stands at 3.1%. The average population density is 73.4 persons/km2 with low densities in the western zone along Lake

Eyasi (7-10 person/km2) and higher densities (100 persons/km2) in Karatu and Mbulumbulu Division. The District is mostly populated by "Iraq tribe" being the dominant, Barbaigs being the minor tribe who are pastoralists and Hadzabe who are hunters and gatherers. It is believed that in the long run, Karatu Township will be the second largest tourist town after Arusha city on the Northern circuit.

1.5. Climate

The climate varies from one area to another in the district. In Eyasi basin the annual rainfall received is between 300mm/ and 400mm/per annum while in Karatu town it ranges between 900mm/ and 1000mm/ per year. In April the rain intensity can be very high enough to cause great erosion. In most places short and long rain are separated by one or two months of slightly less rainfall. The District experiences four seasons which are short rainy-extended from November to December, short and hot dry period from January to March and mid May while the long and cold seasons occurs from June to October

1.6. Agro – ecological zones

Karatu District is divided into three agro-ecological zones namely Highland bordering Ngorongoro, Midland bordering Marangu forest and Low lands bordering Lake Eyasi Basin.

Highland Zone

It covers Lositete, Upper Kitete, Slahhamo, Kambi ya Simba, Kilimatembo, Rhotia Kati, Kainam Rhotia, Ayalabe, Tloma, Oldeani, Getamock, Buger, Ayalalio, Endonyawe and Makhoromba. Highland zone lies between 1400–2000m above sea level with rainfall range between 600 – 800mm per annum. It has a clay loam type of soil which allows wheat, barley, coffee; cut flowers, Artemisia, maize, beans and chick peas to grow well.

Midlands Zone

This zone lies at Chemchem, Kilimamoja, Gyekrum Lambo, Gyekrum Arusha, Gongali, Bashay Qurus, Endashangwet, Changarawe, Bassodawish, Endamarariek, Khusmayi, Endallah, Qaru, Endabash, and Kambi ya Faru, Laja and Ngaibara. The zone has an altitude of between 900 – 1400m above sea level, with rainfall of more than 600mm per annum. It has a clay loam sand soil which suits crops like maize, beans, pigeon peas, finger millet, sunflower, sorghum, safflower, and cassava and dolicus lablab to grow well.

Low land Zone

The zone covers the land of Matala, Dumbechand, Jobaj, Mbuga Nyekundu, Qangdend, Endamaghan, Maleckchand, Mang'ola Barazani and Laghangarer. It gets rainfall of more than 300mm. Soil type is that of sand slit loam which allows crops like onions, paddy, maize, sweet potatoes, vegetables and sorghum to grow well.

1.7. Socio-Economic Status

The main economic activities carried in Karatu are Agriculture and livestock keeping which occupies more than 85%. There are no industries. Some people are doing petty business-employed in retail shops that exist in Manyara and Karatu towns, Endabash, Oldeani and Mang'ola trading centers.

1.8. Social and Economic Development

The district per capita income is still estimated to be TSh. 800,000/= per annum, we expecting changes in a short time after the exercise of data and relevant information collected and been calculated for GDP. Other

important indicators of development are as follow; literacy rate is 64, population growth rate 3.1, dependency ratio 97, employment in agriculture 61%, livestock keeping 7.49%, office 3.14%, elementary occupation 21.33%, plant operations/assemble 0.37%, Business operation 3%, hand hoes as owned by most people is 79%, while sex ratio is 108, energy consumption (electricity) is 4% and firewood is 96%.

1.9. Infrastructure/ Communication

The District has road networks with total length of 713 km, of which the regional road occupies 253 km. 52km of 253km is tarmac road while 460km are District roads in which 76.3km is gravel and 383.7km are earth roads.

There are 5 airstrips-Manyara, Qurus, Matala, Qangdend and Buger. Only Manyara is the commercial airstrip. There are 548 telephone lines (TTCL) and cellular network operated by Vodacom, Tigo, Zain and Zantel.

1.10. Agriculture:

The District has an area of 102,573 ha arable land for cultivation. The main cash crops are coffee, onion, wheat, barley, pigeon peas and sunflower while food crops comprise of maize, beans, finger millet and sorghum. The main crops diseases are gray leaf spot, coffee berry, maize leather necrotic diseases (MLND) and wheat leaf rust. In 2015/2016 the District actual hectors cultivated were 48,197.1 ha for food crops and 27,782.5 ha of cash crops. Production for maize was 81,112.8 tons in 2015/16. However the District strategy is to increase production per unit area e.g. maize from the present 8-10 bags per acre up to 15-20 bags per acre. Reaching this target, food will be sufficient in the district. The District is putting emphasis on "Killimo Kwanza" spirit.

1.10.1 Agriculture potentials

The total arable land in the district is 1,025.75 square kilometers which constitutes 31.1% of the total area. The potential land for irrigation agriculture is 6,231ha and the area under irrigation is about 4,050ha. The source of water are Qang'nded, Manyara (Chemchem) and Endashangwet springs. The large area under agriculture is very productive and connected well with rough road (gravel road)

1.10.2. Farm inputs

In the district farmers are advanced in agriculture since 65% of them use the hybrid seeds, industrial fertilizers and tractors in farm preparation. The average production for maize per hector is 3 tones in rain fed areas, 5.75tonnes under irrigation areas. This awareness makes Karatu to be the most productive area in agriculture produce in Arusha region.

Trading and Market opportunities

Karatu District is well connected to the road from Arusha via Karatu to Mwanza and Musoma passes through the town which makes Karatu town to be an active business centre. Furthermore the Karatu town is the nearest lodging center for the tourists who visit Ngorongoro Crater and Serengeti National park; this environment resulted to high rate of investment in International Hotels and high circulation of money due to arrival of many foreigners.

1.11. Trade and Industries

Trade and Industries activities are growing rapidly due to the fact that the District is in the outskirt of national major commercial city of Arusha as such; both local and foreign investors are attracted by the potential

economic opportunities available in Karatu.

Trade

Currently, significant number of Karatu residents engaged in trading where as more 2,000 trading entities are in place ranging from retail and wholesale shops; hospitality industries such as kiosks, restaurants and hotels; apartments, boarding houses, lodging and guest houses as well as liquors bars; transport business; banking; bookshops, stationeries and printing; beauty salon and barber shops; professional consultancies; farm implements; butchers; pharmacies; mobile phone shops etc

Industry

Industrialization is taking good slow move especially, in small scale industries establishment comparing to medium and large scale establishment. There is 5 small scale industries mainly in processing agricultural and livestock's produce; 1 medium industry processing and canning milk (Ayalabe Diary milk industry). Small scale industries mostly are agricultural produce processors while others use other types of inputs such as coffee.

2.0 Why Investing In Karatu District

Karatu District Council is charged with providing social and economic services to the people in the district.

Our Vision is "sustainability of social and economic Development of people of Karatu". Our Mission is "To provide social and economic service to the community through efficient and effective use of available resources and contribution of other stakeholders for the wellbeing of the people".

To reach the above goals the council has set the following top priorities:

- 1. Education
- 2. Water supply
- 3. Health
- 4. Revenue improvement
- Social and economic infrastructure
- 5. Employment Creation

Annex 5: GUIDANCE FOR IMPLEMENTING ENTITIES ON COMPLIANCE WITH THE ADAPTATION FUND. ENVIRONMENTAL AND SOCIAL POLICY

The Adaptation Fund (AF) has developed guidance on Environmental and Social Policy (ESP), approved in November 2013 and revised in March 2016, which ensures that projects and programmes supported by the Fund promote positive environmental and social benefits, and mitigate or avoid adverse environmental and social risks and impacts. "Managing these risks is integral to the success of the projects/programmes and the desired outcome". The guideline has 15 principles. Out of these 15 principles; this project found the following 12 principles are relevant to the proposed project. These are Principle 1: Compliance with the Law; Principle 2: Access and Equity; Principle 3: Marginalized and Vulnerable Groups; Principle 5: Gender Equality and Women's Empowerment; Principle 8: Involuntary Resettlement; Principle 9: Protection of Natural Habitats; Principle 10: Conservation of Biological Diversity; Principle 11: Climate Change; Principle 12: Pollution Prevention and Resource Efficiency; Principle 13: Public Health; Principle 14: Physical and Cultural Heritage; and Principle 15: Lands and Soil Conservation. This ESMP describes how this project will address and be compliance to the AF guidelines. The Adaptation guidelines and Principles are elaborated in detail in *Table 3*.

Table 17: Principles to Guide Screening and Management of Environmental and SocialImpacts of BCRA-Project planned activities

Prin	ci
ple	1:
Com	pl
ianc	e
with	
the	
Law	

Projects/programmes supported by the Fund shall be in compliance with all applicable domestic and international law. In this regards, the Implementing Entity (IE) will ensure that the project/programme comply with applicable domestic and international law as described at section 2 above. In support of the Proposal, the IE will provide, when relevant, a description of the legal and regulatory framework for any project activity that may require prior permission (such as planning permission, environmental permits, construction permits, permits for water extraction, emissions, and use or production or storage of harmful substances). For each such a requirement, the IE will describe the current status, any steps already taken, and the plan to achieve compliance with relevant domestic and international laws.

Princi ple 2: Acce ss and Equit y Projects/programmes supported by the Fund shall provide fair and equitable access to benefits in a manner that is inclusive and does not impede access to basic health services, clean water and sanitation, energy, education, housing, safe and decent working conditions, and land rights. Projects/programmes should not exacerbate existing inequities, particularly with respect to marginalized or vulnerable groups. The process of allocating access to project/programme benefits should be fair and impartial. A fair process treats people equally without favouritism or

discrimination, and an impartial process treats all rivals or disputants equally. Furthermore, the project/programme will be designed and implemented in a way that will not impede access of any group to the essential services and rights mentioned in the Principle. Possible elements that may be considered The IE can demonstrate compliance of the project/programme by describing the process of allocating and distributing project/programme benefits, and by showing how this process ensures fair and impartial access to benefits. It may also state clearly that there will be neither discrimination nor favouritism in accessing project/programme benefits. The IE may demonstrate that the project/programme does not impede access of any group to the essential services and rights indicted in the principle. ESP Guidance document 7 In addition, the project/programme can use a risk analysis to identify and assess the risk of impeding access to essential rights and services, and of exacerbating existing inequalities. The IE may conduct stakeholder mapping in order to identify the potential beneficiaries, rivals, disputants, marginalized, or vulnerable people.

Principle
3:
Marginali
zed and
Vulnerab
le
Groups.

Projects/programmes supported by the Fund shall avoid imposing any disproportionate adverse impacts on marginalized and vulnerable groups including children, women and girls, the elderly, indigenous people, tribal groups, displaced people, refugees, people living with disabilities, and people living with HIV/AIDS. In screening any proposed project/programme, the implementing entities shall assess and consider particular impacts on marginalized and vulnerable groups. Impacts on marginalized and vulnerable groups must be considered so that such groups do not experience adverse impacts from the project/programme that are disproportionate to those experienced by others. Marginalized groups are groups of people who are excluded from the normal economic and social fabric of societies, thus lacking access to basic essential services and facilities. Furthermore, they lack the means to improve themselves (motivation, social capital, skills and knowledge) and have low resilience. Vulnerable groups are groups of people unable or with diminished capacity to anticipate, cope with, resist, and recover from the impacts of (external) pressures, facing a higher risk of poverty and social exclusion than the general population. Vulnerability can stem from belonging or being perceived to belong to a certain group or institution, and is a relative and dynamic concept. Using accepted methods based on disaggregated data, where possible, the IE should identify and quantify the groups mentioned in the principle (children, women and girls, the elderly, indigenous people, tribal groups, displaced people, refugees, people living with disabilities, and people living with HIV/AIDS) as well as any groups identified additionally such as seasonal migrants or illegal aliens. If anyare present, the IE should:

- Describe the characteristics of the marginalized or vulnerable groups.
 Identify adverse impacts that each marginalized and vulnerable group are likely to experience from the project/programme, taking into consideration the specific needs, limitations, constraints and requirements of each group. For example, a small detour or the construction of a minor obstacle for most able-bodied people could be an insurmountable obstacle to wheelchair users or persons with certain disabilities. These are examples of disproportionate adverse impacts.
- Describe how the impacts are not disproportionate compared to no marginalized and non-vulnerable groups, or how they can be mitigated or prevented so as not to be disproportionate. These mitigation measures could be design or operational features of infrastructure, or access guarantees to ESP Guidance document 8 project benefits for those without complete administrative files such as refugees and internally displaced persons or tribal groups.
- Describe monitoring that may be needed during project/programme implementation for the possible occurrence of disproportionate adverse impacts on marginalized and vulnerable groups, assituations may change over time (e.g. the arrival of refugees or internally displaced persons).

Principl e 4: Human Rights

Projects/programmes supported by the Fund shall respect and where applicable promote international human rights. The Universal Declaration of Human Rights (UDHR) of 10 December 1948 provides a common standard of achievements for all peoples and all nations by setting out fundamental human rights to be universally protected. A number of human rights bodies were created based on the UN Charter, including the Human Rights Council, and under the international human rights treaties to monitor their implementation. The Office of the High Commissioner for Human Rights (OHCHR) supports the different human rights monitoring mechanisms in the United Nations system.8 Promotion of human rights in the project/programme will be achieved by creating awareness with all involved in the project/programme operations, including design, execution, monitoring, and evaluation, about the Universal Declaration of Human Rights as an overarching principle in the implementation of the project/programme. The text of the UDHR is freely available in 438 languages.9 Possible elements that may be considered Information that the IE may consider when assessing the project/programme potential risks with regard to this principle: When the host country or countries of the project/programme are cited in any Human Rights Council Special

Procedures, be they thematic10 or country11 mandates, the IE may

provide an overview of the relevant human rights issues that are identified in the Special Procedures and describe how the project/programme will address any such relevant human rights issues.

- Human rights issues should be an explicit part of consultations with stakeholders during the identification and/or formulation of the project/programme. The findings on human rights issues of the consultations should then be included in the project/programme document, and details of the consultations added as an annex. 8 The Human Rights Council uses so-called Special Procedures. which are mechanisms to address either specific country situations or thematic issues in all parts of the world. Special Procedures' mandates usually call on mandate-holders to examine, monitor, advise and publicly report on human rights situations in specific countries or territories, known as country mandates, or on major phenomena of human rights violations worldwide, known as thematic mandates. There are 30 thematic mandates and 8 country mandates. All report to the Human Rights Council on their recommendations. findingsand http://www.ohchr.org/EN/UDHR/Pages/SearchByLang.aspx 10 http://www.ohchr.org/EN/HRBodies/SP/Pages/Themes.aspx 11 http://www.ohchr.org/EN/HRBodies/SP/Pages/Countries.aspx ESMP Guidance document
- Even if the country or countries where the project/programme will be implemented is not a Party to any of the nine core international human rights treaties,12 compliance with UDHR, at a minimum, will be monitored.

Principle 5: Gender Equality and Women's Empowerment Projects/programmes supported by the Fund shall be designed and implemented in such a way that both women and men 1) have equal opportunities to participate as per the Fund gender policy; 2) receive comparable social and economic benefits; and 3) do not suffer disproportionate adverse effects during the development process. In many societies, different roles are allocated to men and women based on cultural, traditional, religious, or other grounds. Gender equality refers to the equal rights, responsibilities, opportunities and access of women and men and boys and girls as well as the equal consideration of the respective interests, needs, and priorities. To ensure gender equality, measures often need to be taken to compensate for or reduce disadvantages that prevent women and men from otherwise operating on an equitable basis. Gender equality and women's empowerment must be applied in the project/programme design and its implementation regardless of the legal and regulatory framework in which the project/programme is set. Principle 5 is guided by Article 2 of

the United Nations Framework Convention on Climate Change (UNFCCC), which refers to "anthropogenic interaction" — therefore interaction of women and men — within the climate system. The UNFCCC has adopted a number of decisions on gender since 2001. The Paris Agreement acknowledged that Parties in their climate actions should be guided by respect for human rights, gender equality and the empowerment of women in its Preamble while stressing the importance of following "a country-driven, gender-responsive, participatory and fully transparent approach" for adaptation action in Article 7(5). Principle 5 is intended to be consistent with other international conventions, in particular with the Universal Declaration of Human Rights (UDHR), the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW), the International Labour Organization (ILO) core conventions, the Millennium Development Goals (MDGs) and follow-up Sustainable Development Goals (SDGs), and the 2030 Agenda for Sustainable The Development. 13 design and implementation the project/programme should ensure that it: 1) Does not include elements that are known to exclude or hamper a gender group based on legal, regulatory, or customary grounds 2) Does not maintain or exacerbate gender inequality or the consequences of gender inequality. For example, unequal access to education based on gender may result in lower literacy rates among the disadvantaged group. This lack of literacy may, as a secondary effect of gender inequality, limit access to benefits or increase adverse effects of the project for that particular group. Possible elements that may be considered Information that may be considered by the IE when assessing the potential risks with regard to this principle: 12 http://www.ohchr.org/EN/ProfessionalInterest/Pages/CoreInstruments.aspx 13 https://sustainabledevelopment.un.org/post2015/transformingourworld **ESMP** Guidance document

- An analysis of the legal and regulatory context with respect to gender equality and women's empowerment in which the project/programme will take place will identify any obstacles to compliance. In addition, analysis of the cultural, traditional, religious, or any other grounds that might result in differential allocation of benefits between men and women, or of the disproportionate adverse impacts from the project/programme may be appropriate.
- Actively pursue equal participation in project/programme activities and stakeholder consultation. Ensure that all positions in the project/programme are effectively equally accessible to men and women, and that women are encouraged to apply and take up

positions.

- The project/programme design and implementation arrangements will ensure equal access to benefits and that there are no disproportionate adverse effects. This may be achieved by any appropriate means, including, e.g Conducting a gender analysis of the sector the project/programme will support;
- Describing the current situation of the allocation of roles and responsibilities in the project/programme sector or area;
- Showing how the project/programme will pro-actively take measures to promote gender equality e.g. by organising separate working groups or conducting separate stakeholder consultations attimes and locations conducive to soliciting opinions of all.

Principle 6: Core Labour Rights.

Projects/programmes supported by the Fund shall meet the core labour standards as identified by the International Labour Organization. The ILO core labour standards are stated in the 1998 ILO Declaration of Fundamental Principles and Rights at Work. 14 The Declaration covers four fundamental principles and rights, which are further developed in eight fundamental rights conventions: 15 • Freedom of association and the effective recognition of the right to collective bargaining (conventions ILO 87 and ILO 98); • Elimination of all forms of forced or compulsory labour (conventions ILO 29 and ILO 105); • Elimination of worst forms of child labour (conventions ILO 138 and ILO 182); 16 • Elimination of discrimination in respect of employment and occupation (conventions ILO 100 and ILO 111). Regardless of whether the countries where Fund's projects/programmes are implemented have ratified the conventions, in the context of the Fund's 14 More information on the core labour rights can be found at http://www.ilo.org/declaration/lang-- en/index.htm 15 The full text of the eight conventions (ILO Conventions 29, 87, 98, 100, 105, 111, 138 and 182) is available from the ILO information system on international labor standards 16 ILO 182 includes not employing children in forced, economically exploitive or hazardous work; or in a way that interferes with educations or is harmful to health or physical, mental, spiritual, moral, or social development. ESP Guidance document 11 project/programme operations the IE will respect, promote, and realize in good faith the principles mentioned above and ensure that they are respected and realized in good faith by the EE and other contractors. Where applicable, the project/programme will incorporate the ILO core labour standards the design and implementation of in the project/programme and create awareness with all involved on how these standards apply. The IE will summarize in the

Proposal how they are ensuring that the EE is implementing the ILO core labour standards. Possible elements that may be considered Information the IE may consider when assessing the project/programme potential risks with regard to this principle: • If the project/programme host country has ratified the eight ILO core conventions, the risks involved may be smaller. National compliance makes it more likely that a project/programme can and will achieve compliance. • The latest ILO assessments of application of the standards in the project/programme country is available in the reports of the two ILO bodies, The Committee of Experts on the Application of Conventions and Recommendations and The International Labour Conference's Tripartite Committee on the Application of Conventions and Recommendations. Other assessments by reputable sources (e.g. the World Bank or regional development banks) may also be used. • Past/present/planned ILO assistance to meet the standards through social dialogue and technical assistance. • Information on any ILO Special procedures relevant to the Member nation or to the project/programme, including details on the triggering representation or complaints. •Demonstration on how the ILO core labour standards will be incorporated in the design and the implementation of the project/programme, as appropriate. • In the case of problematic assessments by ILO of compliance or in the case of Special procedures at the national level, the IE will provide information on how these issues will be addressed, if they are relevant to the project/programme. Reference made a monitoring may be to process project/programme implementation for future possible problematic ILO assessments or new Special procedures.

Principle 7: Indigenou sPeoples

Fund The shall not support projects/programmes inconsistent with the rights and responsibilities set forth in the UN Declaration on the Rights of Indigenous Peoples and other applicable international instruments relating to indigenous peoples. The 2007 UN Declaration on the Rights of Indigenous Peoples (UNDRIP) has its legal foundation in ILO Convention 169 concerning Indigenous and Tribal Peoples in Independent Countries. As part of the system of thematic Special Procedures, the Human Rights Council has appointed a Special Rapporteur on the rights of indigenous ESP Guidance document 12 peoples. The Special Rapporteur promotes good practices, reports on the overall human rights situations of indigenous peoples in selected countries, addresses specific cases of alleged violations of the rights of indigenous peoples, and conducts or contributes to thematic studies. "Other applicable international instruments relating to indigenous peoples" means any treaties, conventions, protocols, or other international instruments related to indigenous peoples to which the project/programme country is a party and that are currently in force. These include but are not limited to the following United Nations (UN) conventions: 17 • Convention against Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment: Convention on the Elimination of All Forms of Discrimination against Women; • Convention on the Rights of the Child; • International Covenant on Civil and Political Rights; • International Covenant on Economic, Social, and Cultural Rights: • International Convention on the Elimination of All Forms of Racial Discrimination. If indigenous peoples are present in the project/programme implementation area the IE will: 1) Describe how the project/programme will be consistent with UNDRIP, and particularly with regard to Free, Prior, Informed Consent (FPIC) 18 during project/programme design, implementation and expected outcomes related to the impacts affecting the communities of indigenous peoples. 2) Describe the involvement of indigenous peoples in the design and the implementation of the project/programme, and provide detailed outcomes of the consultation process of the indigenous peoples. 3) Provide documented evidence of the mutually accepted process between the project/programme and the affected communities and evidence of agreement between the parties as the outcome of the negotiations. FPIC does not necessarily require unanimity and may be achieved even when individuals or groups within the community explicitly disagree. 4) Provide a summary of any reports, specific cases, or complaints that have been made with respect to the rights of indigenous peoples by the Special Rapporteur and that are relevant to the project/programme. This summary should include information subsequent actions, and how the project/programme will specifically ensure consistency with the UNDRIP on the issues that were raised. Possible elements that may be considered 17 Links to these conventions are available at www2.ohchr.org/english/law. The ratification status of is each convention by country available at http://treaties.un.org/Pages/Treaties.aspx?id= 4&subid=A&lang=en 18 Free, Prior, Informed Consent (FPIC) is the principle that a community has the right to give or withhold its consent to proposed projects that may affect the lands they customarily own, occupy or otherwise use. ESP Guidance document 13 Information that the IE may consider when assessing the project/programme potential risks: • Status of ratification of ILO Convention 169 by the country or countries in which the project/programme will be implemented. • Project/programme consistency with the UNDRIP may further be enhanced by creating awareness about the rights of indigenous peoples and how it is a general principle in the implementation of the project/programme.

Principle 8: Involuntary

Projects/programmes supported by the Fund shall be designed and implemented in a way that avoids or minimizes the need for involuntary

Resettlement.

resettlement. When limited involuntary resettlement is unavoidable, due process should be observed so that displaced persons shall be informed of their rights, consulted on their options, and offered technically, economically, and socially feasible resettlement alternatives or fair and adequate compensation. Involuntary resettlement refers to both physical displacement (relocation or loss of shelter) and to economic displacement (loss of assets or access to assets that leads to loss of income sources or other means of livelihood). Resettlement is considered involuntary when affected persons or communities do not have the right to refuse land acquisition or restrictions on land use that result in physical or economic displacement because of either: 1) lawful expropriation or temporary or permanent restrictions on land use, and 2) negotiated settlements in which the buyer can resort to expropriation or impose legal restrictions on land use if negotiations with the seller fail. This principle does not apply to resettlement resulting from voluntary land transactions in which the seller is not obligated to sell and the buyer cannot resort to expropriation or other compulsory processes sanctioned by the legal system of the host country if negotiations fail. The IE should determine if physical or economic displacement is required by the project/programme and if it is voluntary or involuntary. If it is involuntary, the IE will: 1) Provide justification for the need for involuntary resettlement by demonstrating any realistic alternatives that were explored, and how the proposed involuntary resettlement has been minimized and is the least harmful solution. 2) Describe in detail the extent of involuntary resettlement, including the number of people and households involved, their socio-economic situation and vulnerability, how their livelihoods will be replaced, and the resettlement alternatives and/or the full replacement cost compensation required whether the displacement is temporary or permanent. 3) Describe in detail the involuntary resettlement process that the project/programme will apply, and the built-in safeguards to ensure that displaced personsshall be informed of their rights in a timely manner, made aware of the grievance mechanism, consulted on their options, and offered technically, economically, and socially feasible resettlement alternatives or fair and adequate compensation. This also should include an overview of the applicable national laws and regulations. 4) Justify the conclusion that the involuntary resettlement is feasible. ESP Guidance document 14 5) Describe the adequacy of the project/programme organisational structure to successfully implement the involuntary resettlement as well as the capacity and experience of the project/programme management with involuntary resettlement. 6) Build awareness of involuntary resettlement and the applicable Principles and procedures of the project/programme.

Principle 9: Protection of Natural Habitats. The Fund shall not support projects/programmes that would involve unjustified conversion or degradation of critical natural habitats, including those that are (a) legally protected; (b) officially proposed for protection; (c) recognized by authoritative sources for their high conservation value. including as critical habitat; or (d) recognized as protected by traditional or indigenous local communities. The Convention on Biological Diversity defines a 'habitat' as the place or type of site where an organism or population naturally occurs. "Critical natural habitat" refers to habitats that are not man-made and that fulfil a critical role for an organism or a population that in the absence or disappearance of that habitat might be severely affected or become extinct. Specific knowledge about a habitat (either common knowledge, traditional insights, or the result of formal scientific research) is always the basis for identifying critical natural habitats. Often, but by no means always, this has resulted in assigning a protected status to such a critical habitat. The principle refers to legal protection at all levels of governance. The absence of legal protection alone cannot be used to conclude that a habitat is not to be considered a critical natural habitat. Reference is made to knowledge about the importance and intrinsic value of a habitat. The precautionary principle prevails where such knowledge is inadequate or inconclusive. The IE will identify: 1) the presence in or near the project/programme area of natural habitats, and 2) the potential of the project/programme to impact directly, indirectly, or cumulatively upon natural habitats. If such habitats exist and there is a potential of the project/programme to impact the habitat, the IE will: 1) Describe the location of the critical habitat in relation to the project and why it cannot be avoided, as well as its characteristics and critical value. 2) For each affected critical natural habitat, provide an analysis on the nature and the extent of the impact including direct, indirect, cumulative, or secondary impacts; the severity or significance of the impact; and a demonstration that the impact is consistent with management plans and affected area custodians. Possible elements that may be considered Information that may assist the IE in decision-making include:

• The laws and regulations within the country that protect natural habitats, including the different forms of protection, and the institutional arrangements for their implementation and enforcement that apply to the habitat. ESP Guidance document 15 • The critical natural habitats nationwide, their location, characteristics and critical value. These areas may be identified based upon their actual or proposed legal protection status, on common knowledge or traditional or indigenous knowledge, or on scientific information on their value. The legal protection refers to all levels of government, as well as international conventions and agreements like the Convention on Wetlands (Ramsar, Iran, 1971). Scientific

knowledge may be in the form of peer-reviewed, published scientific

research, or inventory lists prepared by authoritative sources like the UNESCO Man and the Biosphere Programme, the International Union for Conservation of Nature (IUCN) and the United Nations Environment Programme (UNEP). Large non-governmental conservation organizations like the World Wide Fund for Nature, BirdLife International, and Conservation International may also be sources of useful information.

Principle 10:

Conservation of Biological Diversity.

Projects/programmes supported by the Fund shall be designed and

implemented in a way that avoids any significant or unjustified reduction or loss of biological diversity or the introduction of known invasive species. The Convention on Biological Diversity (CBD) defines biological diversity as "the variability among living organisms from all sources including, inter alia, terrestrial, marine and other aquatic ecosystems and the ecological complexes of which they are part; this includes diversity within species, between species and of ecosystems." This definition implies that biological diversity concerns not only living organisms of all taxa but also ecosystem processes, habitats, hydrological cycles, processes

of erosion and sedimentation, landscapes, etc. The Cartagena Protocol on

Bio-safety to the Convention on Biological Diversity is an international treaty governing the movements of living modified organisms (LMOs) resulting from modern biotechnology from one country to another. The IE will identify: 1) the presence in or near the project/programme area of important biological diversity; 2) potential of a significant or unjustified reduction or loss of biological diversity, and 3) potential to introduce known invasive species. If important biological diversity exists and will be significantly or unjustifiably impacted or if the project/programme will introduce known invasive species, the IE will: Biological diversity • Describe the elements of known biological diversity importance in the project/programme area, using any relevant sources of information, such as

protection status, status on the IUCN Red List of Threatened Species19

and other inventories, recognition as a UNESCO Man and the Biosphere Programme reserve20, Ramsar site, 21 etc. • Describe why the biological diversity cannot be avoided and what measures will be taken to minimize impacts. 19 International Union for Conservation of Nature, www.iucnredlist.org 20 United Nations Educational, Scientific and Cultural

www.unesco.org/new/en/naturalsciences/environment/ecologicalsciences/man-and-biosphere-programme 21 Convention on Wetlands of International Importance, called the Ramsar Convention, www.ramsar.org ESP Guidance document 16 Invasive Species • Describe the invasive species that either may or will be introduced and why such introduction cannot be avoided. • Provide evidence that this introduction is permitted in accordance with the existing regulatory framework22 and the results of a

risk assessment analysing the potential for invasive behaviour. • Describe the measures to be taken to minimize the possibility of spreading the invasive species

Principle 11: Climate Change.

Projects/programmes supported by the Fund shall not result in any significant or unjustified increase in greenhouse gas emissions or other drivers of climate change. The main drivers of climate change that are considered here are the emission of carbon dioxide gas from the use of

fossil fuel and from changes in land use, methane and nitrous oxide emissions from agriculture, emission of hydrofluorocarbons, perfluorocarbons, sulphur hexafluoride, other halocarbons, aerosols, and

ozone. Compliance with the principle may be demonstrated by a risk-based assessment of resulting increases in the emissions of greenhouse gasses or

in other drivers of climate change. Projects/programmes23 in the following sectors require a greenhouse gas emissions calculation using internationally recognized methodologies: 24 energy, transport, heavy industry, building materials, large-scale agriculture, large-scale forest products, and waste management. The calculations will be used as a basis

for a substantiated evaluation of the significance and justification of any increase. Other projects/programmes may demonstrate compliance by carrying out a qualitative risk assessment for each of the mentioned drivers of climate change, plus any impact by the project/programme on carbon capture and sequestration capacity.

Principle 12:

Pollution Prevention and Resource Efficiency.

Projects/programmes supported by the Fund shall be designed and

implemented in a way that meets applicable international standards for maximizing energy efficiency and minimizing material resource use, the production of wastes, and the release of pollutants. There are two distinct aspects to this principle. Projects/programmes shall on the one hand minimize in a reasonable and cost-effective way the resources that will be used during implementation. This applies to all sources and forms of energy, to water, and to other resources and materials inputs. On the other

hand, the project/programme will minimize the production of waste and the release of pollutants (including GHGs). Possible elements that may be considered 22 Including the Cartagena protocol for countries that have ratified it. 23 If a programme contains one project that is in one of the sectors mentioned, the requirement will apply to the whole programme. 24 In line with the Guidelines for National Greenhouse Gas Inventories (2006) of the Intergovernmental Panel on Climate Change (IPCC) www.ipcc-nggip.iges.or.jp/public/2006gl/. Tools are available from a

number of sources, including www.ghgprotocol.org, www.epa.gov/climatechange/emissions/ghgrulemaking.html, and www.defra.gov.uk/publications/2011/03/26/ghg-guidance-pb13309. ESP Guidance document 17 IEs may illustrate the minimization of resource use

by showing how this concept has been applied in the project/programme design and how this will be effective during implementation. Such illustration may include references to certain design options/alternatives and implementation arrangements. Where international standards for maximizing energy efficiency and minimizing material resource use apply, these will be listed and a description provided on how the design and implementation arrangements of the project/programme are consistent. Preventing waste and pollution may be achieved by preparing a waste and pollution prevention and management plan for the whole project/programme. The nature and quantity of the waste, as well as those of possible pollutants the project/programme may produce, will determine the level of detail and the performance requirements of the waste and pollution prevention and management plan. The plan should include the cost of implementation arrangements and as well as implementation and performance monitoring. The guiding principles of the waste and pollution prevention and management plan should be prevention, a precautionary approach, evidence-based monitoring, and participation and consultation. Implementation of the plan will be duly documented and all those involved in project/programme implementation will be familiarized with the plan and its implications.

Principle 13: Public Health.

Projects/programmes supported by the Fund shall be designed and implemented in a way that avoids potentially significant negative impacts on public health. Possible public health impacts of a project/programme can be determined by assessing its impact on a range of so-called determinants of health. 25 Public health is determined not just by access to medical care and facilities and lifestyle choices, but also by a much broader set of social and economic conditions in which people live. Possible elements that may be considered The project/programme may demonstrate that it will not cause potentially significant negative impacts on public health by screening for possible impacts and including the results of the screening in the Proposal. Health impact screening is a process of rapidly and systematically identifying the project/programme's potential impacts on public health. It will typically also elucidate the risk of such effects and determine if a further thorough public health impact assessment and the development of a management plan is needed to prevent potentially significant impacts and to demonstrate compliance with the principle. This screening can thus be the first step in a full health impact assessment, depending on the outcome of the screening. A range of health impact assessment and screening tools exist. For the purpose of demonstrating compliance, a checklist for health impact assessment screening may be used. Such a checklist considers the potential impact of

the project/programme on a comprehensive range of health determinants

for the population as a whole and for groups within the population. A health impact-screening checklist should include at least the following sections: 1) a section on the background and context of the project/programme; 2) a section with an adequate list of health determinants, with space for a nuanced assessment, for each determinant, the likelihood of impact occurring; and 3) a section identifying the group(s) most likely to be affected by each health determinant 25 Further information on determinants of health is available e.g. from the World Health Organization website http://www.who.int/hia/evidence/doh/en/ ESPGuidance document 18 If the outcome of the screening is that no potentially significant negative impacts on public health are likely, then the screening may be used to demonstrate compliance. If on the other hand the screening concludes that further health impact assessment is needed, then the outcome of that process may be used to demonstrate compliance. Both screening and possibly health impact assessments must comply with the relevant WHO recommended practices.

Principle 14: Physical and Cultural Heritage.

Projects/programmes supported by the Fund shall be designed and implemented in a way that avoids the alteration, damage, or removal of any physical cultural resources, cultural sites, and sites with unique natural values recognized as such at the community, national or international level. Projects/programmes should also not permanently interfere with existing access and use of such physical and cultural resources. The reference for international recognition of physical and cultural heritage is the 1972 UNESCO Convention Concerning the Protection of the World Cultural and Natural Heritage. Convention Articles 1 and 2 provide definitions of what is considered cultural27 and natural28 heritage. The List of World Heritage in Danger29 (Article 11 (4) of the Convention) also provides a reference. The IE will identify the presence of cultural heritage in or near the project/programme. If cultural heritage exists, the IE will: • Describe the cultural heritage, the location and the results of a risk assessment analysing the potential for impacting the cultural heritage; and

- Describe the measures to be taken to ensure that cultural heritage is not impacted, and if it is being accessed by communities, how this access will continue. Possible elements that may be considered Information that may assist the IE when assessing the project/programme potential risks include:
- Status of ratification and entry into force of the Convention Concerning the Protection of the World Cultural and Natural Heritage by the country or countries in which the project/programme will be implemented. 26 http://www.who.int/hia/en/ 27 monuments: architectural works, works of monumental sculpture and painting, elements or structures of an archaeological nature, inscriptions, cave dwellings and combinations of

features, which	are of	outstanding	universal	value from	the point	of view

of history, art or science; groups of buildings: groups of separate or connected buildings which, because of their architecture, homogeneity or their place in the landscape, are of outstanding universal value from the point of view of history, art or science; sites: works of man or the combined works of nature and man, and areas including archaeological sites which are of outstanding universal value from the historical, aesthetic, ethnological or anthropological point of view. 28 natural features consisting of physical and biological formations or groups of such formations, which are of outstanding universal value from the aesthetic or scientific point of view; geological and physiographical formations and precisely delineated areas which constitute the habitat of threatened species of animals and plants of outstanding universal value from the point of view of science or conservation; natural sites or precisely delineated natural areas of outstanding universal value from the point of view of science. conservation or natural beauty. http://whc.unesco.org/en/danger ESP Guidance document 19 • National legal and regulatory framework for recognition and protection of physical and cultural heritage in the country or countries where project/programme is implemented. • Inventory of the physical and cultural heritage present in the wider project/programme area that enjoys recognition at community, national, or international levels.

Principle 15: Lands and Soil Conservation.

Projects/programmes supported by the Fund shall be designed and implemented in a way that promotes soil conservation and avoids degradation or conversion of productive lands or land that provides valuable ecosystem services. Principle 15 concerns the stewardship of landto either be maintained in its natural state, where possible, or if it is converted to promote and protect its functioning. Soil conservation refersto a set of measures to prevent, mitigate or control soil erosion and degradation. 30 There are two aspects to the principle: promotion of soil conservation and avoidance of degradation or conversion of valuable lands. This applies to soils and lands directly affected by the project/programme as well as those influenced indirectly, or as a secondary or cumulative effect. Soil conservation should be incorporated inproject/programme design and implementation. Soil conservation The IE will identify: 1) the presence of fragile soils (e.g. soils on the margin of a desert area, coastal soils, soils located on steep slopes, rocky areas with very thin soil) within the project area or 2) project/programme activities that could result in the loss of otherwise non-fragile soil. If such soils exist and potential soil loss activities will take place, the IE will: • Identify and describe: o Soils that may be impacted by the project/programme; o Activities that may lead to loss of soils; o Reasons why soil loss is unavoidable and o Measures that will be taken to minimize soil loss. •

Describe how soil conservation has been promoted to the EE. Valuable lands The IE will identify: 1) productive lands and/or lands that provide valuable ecosystem services within the project/programme area. If such lands exist, the IE will: • Identify and describe: o The lands; o Project/programme activities that may lead to land degradation; o Reasons why using these lands is un-avoidable and the alternatives that were assessed, and o Measures that will be taken to minimize productive land degradation or ecosystem service impacts. 30 The Food and Agriculture Organization of the United Nations defines soil degradation as a change in the soil health status resulting in a diminished capacity of the ecosystem to provide goods and services for its beneficiaries. ESP Guidance document 20 4. Demonstrating compliance with the ESP in the project/programme proposal document This section describes how the IE can present the relevant environmental and social risk information in the funding proposal to the Board, at both concept and fully developed proposal stages. In the Proposal Section II.K, from the concept stage, the IE will document and summarize the findings of the screening/assessment process and categorization, including completing the checklist provided in that section of the proposal. Detailed information on the screening process and findings should be made available as an annex. Categorization The outcome of the screening and assessment process is used to determine the environmental and social categorization of the risk for the project/programme. This should be done at the concept stage. The criteria for categorization are described in paragraph 8 of the ESP. 31 The IE may present the findings of the screening/assessment process to substantiate and support its determination of the category for a project/programme. It is not possible to provide universal reference points to quantify severity of environmental and social impacts. Therefore, the IE will provide rationales to support their determination of severity and acceptability so that the determination can be reviewed as necessary. Category C projects/programmes are those for which no adverse environmental or social impacts are anticipated at the time of screening, and that do not require further impact assessment. Nevertheless, during the implementation of category C projects/programmes, low-level monitoring for unexpected environmental or social impacts will be included in the project/programme design and will be reported on annually. Conducting environmental and social assessments As a general rule, the IE, when required, should conduct impact assessment before submitting fully-developed project/programme Environmental and Social Management Plan Risks and/or impacts that are identified and determined as unavoidable in the assessment process should be captured in an environmental and social management plan. This may be a single plan or a

collection of plans. This plan should be submitted at the fully-developed proposal stage. The environmental and social management plan should describe the risk mitigation measures that will be taken to ensure consistency with the ESP Principles and applicable host country laws and regulations. Much of the content of an environmental and social management plan will consist of the specific management plans and related activities that have been identified during the impact assessment in accordance with the separate Principles. Management plan should describe the risk mitigation measures that will be taken to ensure consistency with the ESP Principles and applicable host The Instructions provide additional detail on management and monitoring plans. In some Category B projects/programmes, where the proposed activities requiring an environmental or social assessment represent a minor part of the project, and when the assessment and/or management plan cannot be completed in time or where 31 See footnote 2 supra. ESP Guidance document 2

Annex 6: PREVAILING POLICY, LEGAL AND INSTITUTIONAL FRAMEWORK FOR ENVIRONMENTAL AND SOCIAL IMPACT.

This section highlights the policies, legal and institutional frameworks for environmental and social impacts management of the proposed projects in the United Republic of Tanzania. There are number of policies, instruments and laws that will guide implementation of this ESMP. Generally, is the National Environmental Policy (NEP) of 1997, the national Environmental management Act 2004 and the Environmental Impacts Assessment (EIA) and Environmental Audit (EA) Regulations, 2005 will guide implementation of the ESMP and the project in line with the AF's Environmental and social policy. Table below provides key policies, legislation and strategies which implementation of this ESMP.

Table 18: National Policies, legislation and strategies which implementation of this ESMP

Name of Policy	Relevance to the proposed project
National Environmental Policy, 1997	Although, the proposed project is viewed to promote social and environmental integrity, its implementation need to be guided by environmental management tools which promote environmental friendly technologies to support actions under component 1,2 and 3; and 4 for stakeholders involved and gender considerations
National W ater P olicy,2002	The policy identifies the importance of water resources to promote social and economic development including for irrigation and water supply for domestic use. It addresses the need to have strong institutional to ensure standards and guidelines are adhered for rural water supply. In construction and service. The policy is more relevant to activities under component 1 and 2
The National Land Policy, 1995	The policy statement provides for the strategic planning and rapid appraisal identification of key planning issues in land and environmental management, and in the provision of housing, infrastructure and services through participatory manner. The policy is more relevant to all activities described under component 1,2 and 3
The Nationa I Investment Promotion Policy, 1996	The policy identifies the need to conserve and protect the environment for sustainable development; but also the pledge for provision of environmental standards to be subscribed by all investment projects.
The Natio nal Energ yPolicy 2003 National s	The Policy requires investors to promote environmental impact assessment as a requirement for all energy programmes and projects. Promote energy efficiency and conservation as a means towards cleaner production and pollution control measures. Promote development of alternative energy sources including renewable energies and wood fuel end- use efficient technologies to protect woodlands and biomass energy. The policy advocates sustainable industrial production and wasteminimization through cleaner production options
National Strategy for Growth and Poverty Reduction (MKUKUTA) The NSGRP,	The NSGRP paper recognizes the roles of industries in poverty eradication, therefore should strategically be established in that order bigger vision with mainstreaming environment as a crosscutting issues.

2009	
2008	
Tanzania Vision	The Vision recognizes that, Tanzania's economy is highly dependent on the climate,
2025	because a large proportion of GDP is associated with climate- sensitive activities,
	particularly agriculture. It elaborates that, extreme weather related events such as
	droughts and floods have already led to major economic costs in the country,
	reducing long- term growth and
	affecting millions of people and their livelihoods and calls for adaptation actions
Community [Community development is realized when people are enabled with strong and
	sustainable adaptive capacity to climate change effects and identify their climate
	related problems and plans ways toward solving them. Therefore community member
	should be involved in planning, decision-
	making and implementation of development and adaptation initiatives
The	The Policy provides for guidelines in establishing and development of gender sensitive
Natio	plans and strategies in all projects, sectors and institutions; while ensuring that there
nal Gender	are equal and quality opportunities for both men and women. This project takes policy
Policy, 2012	guidance on gender to foster its implementation in-line with the AF's environment
	and social
The	Policy The document addresses the National goals on universal access to safe and clean
Natio	water; with reduction of malnutrition diseases burden, infantand maternal mortality
nal	while increasing life expectancy by promoting environmental health and sanitation.
Healt	For this to be realized improved environmental cleanliness and monitoring of water
hPolicy, 2007	quality and safety are
,,	a key requirement.
National	The objective of the Agriculture policy is to improve food security and alleviate poverty,
Agriculture	while promoting integrated and sustainable use and management of natural resources
Policy2013	such as land, soil, water and vegetation. It also recognizes and put guidance to
	promote adaptation and resilience actions in the sector. Activities under component
	1, 2 and 3 much very
	Much with the directives of this policy.
Livestock policy	Recognize that Tanzania is a low-income rural economy, with livestock contributing
2004	30% to agricultural value added and 7% to and to Poverty reduction, and 99% of the
	livestock stock is in the hands of small farmers and pastoralists who are vulnerable to
	impacts of climate change. Activities under component 2 and 3 will be
	implemented in line with
	Directives of this policy.

Forestry Policy 2002 under review

The policy recognizes that, climate change impacts affect many forest and ecosystem processes. Is guides to protecting and conserving biodiversity through application of best practices in soil and water conservation; expanding forest cover and use of adaptive species as well as linking conservation areas as vital measures in adapting to climate change and ensuring continuity in the availability of ecosystem goods and services hence improving the livelihoods of Tanzanian. It also promotes bee keeping and tree planting as potential alternative for livelihood improvement as adaptation measures

National Climate Change Strategy 2012

This Strategy has been developed with a Vision to enhance climate resilience in Tanzania and reduce the vulnerability of natural and social systems to climate change. The Mission is to establish efficient and effective mechanisms to address climate change adaptation and achieve sustainable national development through mitigation actions with enhanced international cooperation. The goal of this Strategy is to enable Tanzania to effectively adapt to and participate in global efforts to Mitigate to climate change with a view to achieving sustainable economic growth in the context of the Tanzania's national development blueprint, Vision 2025; Five Years National Development plans; and national cross- sectoral policies in line with established international policy framework. The strategy aims to build the capacity of the nation to adapt to climate change impacts and to enhance resilience of ecosystems to the challenges posed by climate change including enhance public awareness on climate change adaptation issues guided by the Paris Agreement Work Programme adopted at COP24 focusing on the NDCs of the Tanzania that intends to contributing to reductions in climate vulnerability and enhance long-term resilience to the adverse impacts of climate change; In doing so, it will significantly reduce the impacts of spatial and temporal variability of rainfall including droughts and floods which have long-term implications to all productive sectors and ecosystems, particularly the agricultural sector. It puts, adaptation measures which are expected to significantly reduce the risksof climate related disasters compared to the current situation and enhance access to clean and safe water from 60% to above 90% of the total population in both rural and urban areas and call the government to put in place adaptation plans to all levels of government structures including at village levels

National
Environment
al
Management
Act Cap 191
of 2004
(EMA, 2004)

An overall guiding document on administration and management of environment matters and social safeguards. It provides for legal and institutional framework for sustainable management of environment in Tanzania. It outline principles for management, impact and risk assessment, prevention and control of pollution, waste management, environmental quality standards, public participation, compliance and enforcement The Act, further provides the basis for implementation of international instruments on environment. The proposed project does not conflict with any provisions of this Act. However, EMA, 2004 will guide its implementations as it promotes actions geared to enhance climate resilient in

its implementations as it promotes actions geared to enhance climate resilient in Tanzania

National Biodiversity Strategy and Action Plan (NBSAP) 2015-2020	Tanzania is one of the twelve mega-diverse countries of the world endowed with different natural ecosystems that harbor a massive wealth of biodiversity. The country hosts 6 out of the 25 world renowned biodiversity hotspots hosting more than one-third of the total plant species on the continent and about 20% of the large mammal population. The Biodiversity wealth contributes significantly to the socio cultural, economic and environmental goods and services to the country and peoples livelihood.
	The NBSAP 2015-2020 highlights the value and contribution of biodiversity to human well-being; the causes and consequences of biodiversity loss; legal and institutional framework; lessons learned; national biodiversity targets; strategies and actions needed to mainstream biodiversity into development, poverty reduction and natural resource management plans. NBSAP 2015-2020 has goals to: a) Address the underlying causes of biodiversity loss by mainstreaming biodiversity across government and society; b) Reduce the direct pressures on biodiversity and promote sustainable use c); To improve the status of biodiversity by safeguarding ecosystems, species and genetic diversity; d) Enhance the benefits to all from biodiversity and ecosystem services; and e) Enhance implementation through participatory planning, knowledge management and capacity building. This project will promote ecosystems and biodiversity conservations through actions under component 2 and 3
Water	The Act provides for the principles of integrated sustainable water resources
Resource	management (precautionary approach, polluter pays principle, principle of ecosystem
Managem ent Act,	management, principle of public participation, principle of international cooperation and the principle of common but differentiated responsibilities). The Act, in Sect.8 and
2009	Sect.9 further provides for Strategic Environmental Assessment and Environmental Impact Assessment practice with respect to EMA Cap.191 of 2004. It also identifies the importance of water resources to promote social and economic development including for irrigation and water supply for domestic use. It addresses the need to have strong institutional to ensure standards and guidelines are adhered for rural water supply. In construction and service. Water Resource Management Act, 2009 is more relevant to activities under component 1, 2 and 3
The Supply	This Act has several provisions on the right of every citizen to have access to
and SanitationAct,	efficient, effective and sustainable water supply and sanitation services; while taking into account the need to protection and conservation of water resources. It also
2009	addresses provisions of safe and clean water for rural villages and combats the effects of climate induced water scarcity in vulnerable communities.

Employme nt and Labor Relation Act, 2004	Prohibits employment of children less than 18 years of age, stipulated types of contracts that can be entered with employees. The Act makes provisions for core labor rights; establishes basic employment standards, provides a framework for collective bargaining; and provides for the prevention and settlement of disputes. Activities under Component 1,2 and 3 will involve employment of communities hence this Act will be adhered and obeyed by the Project Management Unit
Occupation al Health and Safety Act, 2003	The law deals with the protection of human health from occupational hazards. Among other provisions, it requires the employer to ensure safety of workers by providing appropriate safety gear at work place. Part V of the Act emphasizes the provision of adequate clean, safe and wholesome drinking water, sufficient and suitable sanitary conveniences and washing facilities in work places. This project will Obey all relevant provisions of this Act
The National Land Act Cap 113, 2002	The administration of land, land allocation and occupation in to public land and general land, village land and reserved land. The Act provides that hazardous land is characterized of danger or degradation of or environmental destruction, if developed. Under this Act, the right to occupancy is liable; though require prompt payment fees or compensation in case of acquisition from owner. The proposed project will not occupy any land for investments. It is not planning to resettle any person during its implementations or its any phase of its lifetime.
The HIV and AIDs (Prevention and Control) Act of 2008	Employer is required to coordinate a workplace programme on HIV and AIDS, for the purposes of prevention the spread but also serving the already infected without stigma. Activities under component 1, 2, 3 and 4 empowers vulnerable and marginalized groups and girls who arevulnerable for new HIV and AIDS affections. This project improve the life quality and living standards of those community groups through income generating activities, water supply and improved farming systems
Workers Compensation Act No.20, 2008	The Act provides for compensation to employees for disablement of death or injuries or resulting from injuries or diseases sustained or contracted in the course of employment. Workers may be exposed to unforeseen hazards or environment risk during execution of activities under Component 1, 2 and 3, therefore the Act is relevant to this project and willguide executions of project activities.
EIA and Audit Regulations, 2005	Made Under Sections 82(1) and 230(2) (h) and (q) of EMA Cap.191 of 2004, these Regulations provides for the procedures to conduct EIA and Audit; it categorizes the EIA mandatory and non – mandatory projects EIA. The Regulations, further depicts the writing and contents of EIS document. However, since this project has no significant negative impacts on the environment and to the community, no EIA is proposed to be conducted.

The Regulations provides that hazardous wastes should be managed properly during
storage, packaging, labeling, transport and disposal processes. It should be treated at
factory level before disposal or discharge. This project will not use any hazardous
materials to attract any
disposal attentions.
These Regulations sets procedures for protecting human health and conservation of
the environment; enforce minimum water quality standards prescribed by the National
Environmental Standards Committee(NESC); enable NESC to determine water usages
for the purposes of establishing environmental quality standards and values for each
usage; and ensure all the discharges of pollutants take account the ability of the
receiving water to accommodate without detriment to the uses specified for the waters
concerned. The proposed water supply is expected to meet the standards described in
these regulations
NDCs 2020-2025 and the INDCs 2015 of United of Republic of Tanzania,
responds to decision of the Conference of the Parties to the UNFCCC, and builds on
the National Climate Change Strategy (2012), the Zanzibar Climate Change Strategy
(2014) and other national climate change development processes. The strategies aim
to, among others, enhance adaptive capacity to climate change and promote
adaptation action, thereby supporting long term climate resilience of social systems
and ecosystems; and enhance participation in climate change mitigation activities to
contribute to international efforts while ensuring sustainable development.
The NDCs provide a set of intervention on adaptation and mitigation, which is expected
to build country resilience to the impacts of climate change and contribute to the global
effort of reducing GHG emission. The proposed contributes the top most five sectors
among the prioritized seven sectors identified in the NDCs 2020-2025 and the INDCs -
2015 of the United Republic of Tanzania for adaptation Actions. It also contribute to the
mitigation contributions of the NDCs and the INDCs through the ecosystem and forest
management actions identified under component 2 and 3.

Annex 7: Organization profile.

ORGANIZATIONAL PROFILE

PREPARED BY: Hakikazi Catalyst P.O. BOX 781 Arusha

Email: hakikazi@hakikazicatalyst.or.tz
Website: www.hakikazicatalyst.or.tz

1.0 DESCRIPTION ON PROFILE OF HAKIKAZI CATALYST

1.1 WHO WE ARE

Hakikazi Catalyst is a civil society organisation, founded in 2000, with no political, religious or regional affiliation. Our goal is social and economic justice, achieved through a rights-based and participatory approach.²

We are a catalyst for change. We enhance the knowledge and skills of poor and marginalised people and their representatives, empowering them to bring about changes in policy and practice that will make the government more responsive to their priorities. We also facilitate constructive dialogue between citizens and government officials at all levels in order to strengthen public accountability.

1.2 OUR VISION

Our vision is that all people are conscious of their rights and empowered to participate in, and enjoy, just, inclusive and sustainable development.

1.3 OUR MISSION

Our mission is to facilitate the empowerment of poor and marginalised people so that they can engage effectively to demand their rights and benefit from meaningful development for all.

² 'Hakikazi' means 'right to a livelihood'.

1.4 OUR VALUES AND BELIEFS

Commitment to justice • We believe that everyone has the right to justice and fair treatment. • We believe that everyone has a contribution to make towards a better world, and that Respect for pluralism and diversity this can be achieved through inclusive political processes. Pluralism and diversity are also opportunities for shared growth and development. • We believe that people have the potential to develop themselves, and that the most Respect for human dignity complex ideas can be explained in simple ways that anyone, regardless of their level of education, can understand. • We believe that we are stewards of resources intended for others. We therefore Integrity, honesty, and the responsible commit unequivocally to account for everything entrusted to us, and to disassociate stewardship of resources ourselves, both individually and collectively, from all forms of malpractice. • We aim to deliver quality programmes and use working methods that optimise Commitment to excellence efficiency and achieve positive results, thereby maintaining public trust in us. • We believe that we can learn from change, and from new technologies and challenges, Embracing and managing change and that these are opportunities to grow.

1.5 OUR GOAL

Our **goal** is to facilitate processes that support the initiatives of poor and marginalized communities to influence change in national and local level policy and practice and also to promote good governance, transparency and accountability that fosters eradication of poverty for sustainable livelihoods. In order to achieve this goal, we focus on the following three goals:

1.5.1 Strategic Goal 1: Policy Analysis, Information and Public Engagement

We aim to generate a shared understanding between communities and decision-makers, particularly at national level, about poverty reduction policies and practices. We will carry out research and share information to ensure that decisions are evidence-based and evidence-led. This will help government become more responsive to citizens' needs and aspirations, and citizens become more engaged in policy, governance and development processes. Public participation in policy development is undermined by the nature of the language used in policy and legal documents, which is something our work will address.

1.5.2 Strategic Goal 2: Good Governance and Accountability

We want to see vibrant communities whose members actively seek information about what is going on in their area and take part in decision-making processes. We aim to mobilise citizens to ensure the accountable governance of national resources for rights-based development. We believe that accountable governance is achieved when people are empowered to know their rights and duties as responsible citizens and to hold leaders accountable when those rights are denied. We will therefore provide marginalised communities and their representatives with tools to help them monitor the inputs, outputs and outcomes relevant to poverty reduction.

1.5.3 Strategic Goal 3: Sustainable Livelihoods

Empowerment puts down deeper roots when awareness-creation is complemented by concrete economic activities. The livelihoods of marginalised communities are increasingly threatened by rapid population growth, environmental degradation, a rise in resource-based conflict, and more frequent and intense droughts. We will implement an integrated development programme that protects and promotes rural and urban livelihoods, strengthening the food security of households and their security of tenure over land and water. We will help communities build their resilience to climate change, natural resources management and work towards the economic empowerment of youth and women.

2.0 OUR BENEFICIARIES AND GEOGRAPHICAL FOCUS

The ultimate beneficiaries of our work are the general public in Tanzania, particularly vulnerable women, children, youth and men. Our direct beneficiaries include our partners and other organisations working on the issues that concern us, as well as community members and their representatives in our programme areas. Our geographical focus is the whole country depending on the need and nature of the projects.

3.0 Our skills, competencies and experiences

We have a long history of taking the meaning of complicated official documents to the

people who need to understand them. We do this in a neutral way that is free from bias and stays true to the original source, in both word and spirit. We are known for pioneering the production and use of popular versions of policies and legislation. These build shared understanding between citizens and decision-makers, creating a friendly policy environment where people can engage constructively with the issues that affect their lives. In this process, knowledge moves in two directions: downstream, to inform lower levels of government and communities about the content of key policies and reforms, and upstream, to help decision-makers understand the impact of policy and practice on poor and marginalized people and what could be done to improve their livelihoods.

We pride ourselves on our ability to produce clear and simple documents that can immediately be understood by someone reading them, or hearing them read aloud. We use a range of visual tools, including cartoons, to make them comprehensible and enjoyable. We believe that more organizations, including government bodies, are starting to use plain language in their written documents in order to strengthen shared understanding and popular participation. We pioneered the use of community score cards in public expenditure tracking as a way of making service providers more accountable for public resources. We have produced a branded version – the PIMA Card – which we feel is particularly suitable for the Tanzanian environment,³ and which we have now used with communities in half the 21 mainland regions.

In 2017/2018 we coordinated and facilitated implementation of the Decentralized Climate Financing for Climate change Adaptation projects in 3 districts of Monduli, Ngorongoro and Longido as well as capacity building of District and Divisional Adaptation Planning Committees. A total of 36 (Monduli 13), Longido 13, Ngorongoro 10) projects were implemented as response towards climate change adaptation. These initiatives were implemented through consortium of various actor from government and non-governmental institutions led by the President's Office Regional Administration and Local Government (PORALG), Hakikazi Catalyst, International Institute for Environment and Development (IIED), United Nations Capital Development Fund (UNCDF), Ministry of Finance and Planning, Vice President Office (Environment), National Environmental Council (NEMC), Tanzania Meteorological Agency (TMA), Local Government Training Institute (LGTI) Hombolo - Dodoma, Institute of Rural Development Planning (IRDP) Dodoma, Tanzania Natural Resources Forum (TNRF) and Local Government Authorities (District Councils) of Monduli, Ngorongoro and Longido in Arusha region.

Since 2018 HKC is a national cluster leader coordinating the PETS in water intervention within the Foundation for Civil Society (FCS) partnership to promote governance and accountability in water sector. The main role of HKC is to ensure continuous interaction and learning between and among CSOs through their thematic area; provide technical assistance to small and grassroots Civil Society Organizations to learn and improve in their performance and project delivery; national level advocacy through influencing policy and governance changes within government structures by addressing and enabling

_

³ 'Pima' means 'measure' in Swahili.

citizens to be able to address accountability and anti-corruption issues.

HKC has built trust, linkages and strong relationship with the government at all levels as well as engagement with national, regional and International networks such as Policy Forum (PF), Agricultural Non State Actors Forum (ANSAF), Tanzania Water and Sanitation Network (TAWASANET), Tanzania Education Network (TEN/MET), Jukwaa la Katiba Tanzania (JUKATA), East African Civil Society Organizations Forum (EACSOF), Decentralized Climate Financing (DCF) Alliance and Global Network for Disaster Reduction.

Introduction

The Decentralized Climate Finance (DCF) Project was being implemented by the Tanzanian President's Office – Regional Administration and Local Government (PO-RALG) which was the National Coordinator in collaboration with the Vice President's Office, Ministry of Finance and Planning, Institute of Rural Development Planning (IRDP), Local Government Training Institute (LGTI), Tanzania Meteorological Agency (TMA) and Hakikazi Catalyst. The project was funded by UKAID with technical support from International Institute of Environment and Development (IIED) and United Nations Capital Development Fund (UNCDF).

The project aimed at providing technical and financial support to the government of Tanzania to build its capacity to mainstream climate change into local government planning and financial systems and to prepare PO-RALG to be accredited as a National Implementing Entity (NIE) to the Green Climate Fund (GCF). The expected outcomes of the project after 5 years of its implementation were;

- i. PO-RALG to become a National Implementing Entity of the GCF, giving it Direct Access to climate finance
- ii. Establishment of an operational Performance-Based Climate Resilient Grant system A Mechanism established for accessing and managing global/national climate finance and channeling to LGAs
- iii. Establishment of a functional decentralized climate finance and planning mechanisms in 15 LGAs A Mechanism established for LGAs to mainstream climate change into planning & budgeting
- iv. Implementing public goods investments that build climate resilience of climate vulnerable people in 15 LGAs
- v. Generation of evidence and learning on the effectiveness of devolved climate finance investments for improving community resilience, differentiated by gender and used to inform policy

The project started as a pilot study in Monduli, Longido and Ngorongoro district councils and is expected to scale up to other 12 district councils in Tanzania mainland. The following is a summary of DCF projects invested/implemented in the district councils of Monduli, Longido and Ngorongoro.

Some pictures showing the types of projects implemented through the decentralized climate funds. The projects were identified and prioritized by the communities.
