Adaptation Fund: Key Achievements of 2021 and Entering 2022 with Promise

Despite the ongoing challenges of the COVID-19 pandemic, the Adaptation Fund (AF) continued to deliver its concrete adaptation projects on the ground to the most vulnerable while expanding its innovative programs and support for developing countries throughout 2021.

The Fund was rewarded near the end of the year with a successful COP26 outcome that reflected wide recognition for its work and furthered its fundraising and policy goals in serving the Paris Agreement, bringing excitement into 2022 as it develops its next five-year strategy to continue to build on its pillars of Action, Innovation, and Learning and Sharing.

In concluding its productive year in December the Fund started the process of developing its next five-year Medium-Term Strategy (MTS) for 2023-2027. Although very early in a process that will involve comprehensive stakeholder consultation, it will build on the successes of AF’s first MTS (2018-2022) and take into account findings from a midterm review by the Fund’s independent Technical Evaluation Reference Group. The review concluded that the first MTS was a good fit-for-purpose strategy, ambitious, forward-looking and responsive to global processes and imperatives for adaptation, reflecting good practices and being fully responsive to the Paris Agreement while also enhancing quality and project compliance. Progress during the first half of the MTS was significant, with AF launching seven new funding windows that received significant responses and enabled it to go beyond past achievements.

AF also released its Annual Performance Report reflecting continued growth across its pillars.

This followed a highly successful resource mobilization effort at COP26 in Glasgow in November, during which AF received unprecedented support with a record US$ 356 million in new pledges—triple what it raised in 2020 and nearly triple its US$ 120 million fundraising goal for 2021. A record 16 contributors included first-time supporters U.S., Canada (national level) and Qatar as well as a record EUR 100 million pledge from the European Union. New multi-year pledges from Norway and Ireland followed a trend set by Sweden a couple years ago, and AF’s largest historical contributor Germany and other consistent donors came through again. Parties to the UN Framework Convention on Climate Change also made several policy decisions expressing support for AF, including finalizing the Paris rulebook with a 5 % share of proceeds from issued emission reduction credits going to AF once the new mechanism becomes operational. With one of the conference’s top goals being enhancing adaptation ambition, the results reflected broad support for AF’s effective work on the ground for climate-vulnerable countries and innovative finance programs that build country ownership, as well as the high demand for its work.
In October, AF’s Board approved or cleared more than US$ 42 million in new projects including several new learning and small innovation grants for the Fund’s national implementing entities (NIEs) under Direct Access. The first grant concepts through AF’s explicit Enhanced Direct Access and Large Innovation Grant windows were also endorsed. “The importance of innovation and local ownership in adaptation is pivotal, and these windows foster both,” said Board Chair Mattias Broman after the meeting. “These larger innovation projects will help scale up and accelerate proven innovative solutions that are needed to address the climate urgency, and the Enhanced Direct Access projects build further on the Adaptation Fund’s pioneering Direct Access modality by directly empowering developing countries’ own institutions to allocate funding for local adaptation projects.”

About the Adaptation Fund

Since 2010, the Adaptation Fund has committed nearly US$878 million for climate change adaptation and resilience projects and programmes, including 127 concrete, localized projects in the most vulnerable communities of developing countries around the world with 31.5 million total beneficiaries. It also pioneered Direct Access and Enhanced Direct Access, empowering countries to access funding and develop local projects directly through accredited national implementing entities.
