

ADAPTATION FUND

AFB/PPRC.36/19
15 September 2025

Adaptation Fund Board
Project and Programme Review Committee
Thirty sixth Meeting
Bonn, Germany, 7-8 October 2025

Agenda Item 4(q)

PROPOSAL FOR COMOROS

Background

1. The Operational Policies and Guidelines (OPG) for Parties to Access Resources from the Adaptation Fund (the Fund), adopted by the Adaptation Fund Board (the Board), state in paragraph 45 that regular adaptation project and programme proposals, i.e. those that request funding exceeding US\$ 1 million, would undergo either a one-step, or a two-step approval process. In case of the one-step process, the proponent would directly submit a fully-developed project proposal. In the two-step process, the proponent would first submit a brief project concept, which would be reviewed by the Project and Programme Review Committee (PPRC) and would have to receive the endorsement of the Board. In the second step, the fully-developed project/programme document would be reviewed by the PPRC, and would ultimately require the Board's approval.

2. The Templates approved by the Board (Annex 5 of the OPG, as amended in March 2016) do not include a separate template for project and programme concepts but provide that these are to be submitted using the project and programme proposal template. The section on Adaptation Fund Project Review Criteria states:

For regular projects using the two-step approval process, only the first four criteria will be applied when reviewing the 1st step for regular project concept. In addition, the information provided in the 1st step approval process with respect to the review criteria for the regular project concept could be less detailed than the information in the request for approval template submitted at the 2nd step approval process. Furthermore, a final project document is required for regular projects for the 2nd step approval, in addition to the approval template.

3. The first four criteria mentioned above are:

- (i) Country Eligibility,
- (ii) Project Eligibility,
- (iii) Resource Availability, and
- (iv) Eligibility of NIE/MIE.

4. The fifth criterion, applied when reviewing a fully-developed project document, is:
(v) Implementation Arrangements.

5. It is worth noting that at the twenty-second Board meeting, the Environmental and Social Policy (ESP) of the Fund was approved and at the twenty-seventh Board meeting, the Gender Policy (GP) of the Fund was also approved. Consequently, compliance with both the ESP and the GP has been included in the review criteria both for concept documents and fully-developed project documents. The proposal template was revised as well, to include sections requesting demonstration of compliance of the project/programme with the ESP and the GP.

6. At its seventeenth meeting, the Board decided (Decision B.17/7) to approve "Instructions for preparing a request for project or programme funding from the Adaptation Fund", contained in the Annex to document AFB/PPRC.8/4, which further outlines applicable review criteria for both

concepts and fully-developed proposals. The latest version of this document was launched in conjunction with the revision of the Operational Policies and Guidelines in November 2013.

7. Based on the Board Decision B.9/2, the first call for project and programme proposals was issued and an invitation letter to eligible Parties to submit project and programme proposals to the Fund was sent out on April 8, 2010.

8. The following project concept document titled “Enhancing Youth Entrepreneurship through Climate Resilient Opportunities (ECO-Youth)” was submitted for Comoros by International Fund for Agricultural Development (IFAD), which is a Multilateral Implementing Entity of the Adaptation Fund.

9. This is the eighth submission of the project concept using the two-step submission process.

10. The current submission was received by the secretariat in time to be considered in the forty-fifth Board meeting. The secretariat carried out a technical review of the project proposal, assigned it the diary number AF00000403, and completed a review sheet.

11. In accordance with a request to the secretariat made by the Board in its 10th meeting, the secretariat shared this review sheet with IFAD, and offered it the opportunity of providing responses before the review sheet was sent to the PPRC.

12. The secretariat is submitting to the PPRC the summary and, pursuant to decision B.17/15, the final technical review of the project, both prepared by the secretariat, along with the final submission of the proposal in the following section. In accordance with decision B.25.15, the proposal is submitted with changes between the initial submission and the revised version highlighted.

ADAPTATION FUND

**ADAPTATION FUND BOARD SECRETARIAT TECHNICAL REVIEW
OF PROJECT/PROGRAMME PROPOSAL**

PROJECT/PROGRAMME CATEGORY:

Country/Region: Comoros
Project Title: Enhancing youth entrepreneurship through Climate Resilient Opportunities (ECO-Youth)
Thematic Focal Area: Rural Development
Implementing Entity: International Fund for Agricultural Development (IFAD)
Executing Entities: Ministry of Agriculture, Fisheries, and Handcrafts
AF Project ID: AF00000403
IE Project ID: **Requested Financing from Adaptation Fund (US Dollars): 10,000,000**
Reviewer and contact person: Linda Ogallo **Co-reviewer(s):**
IE Contact Person:

**Technical
Summary**

The project Enhancing youth entrepreneurship through Climate Resilient Opportunities (ECO-Youth) aims to contribute to poverty reduction and the strengthening of rural communities' resilience and adaptation to climate change. This will be done through the three components below:

Component 1: Capacity building and green entrepreneurial and employment initiatives (USD 3,990,000);

Component 2: Green business partnerships and sustainable employment opportunities (USD 3,775,000);

Component 3: Strengthening of the policy and institutional framework for the greening of youth employment in rural areas (USD 577,978).

Requested financing overview:

Project/Programme Execution Cost: USD 873,612

Total Project/Programme Cost: USD 9,216,590

Implementing Fee: USD 783,410

Financing Requested: USD 10,000,000

The proposal includes a request for a project formulation grant and/or project formulation assistance grant of USD150,000.

The first technical review raises several issues, such as climate change adaptation justification, ESP, Gender Policy, duplication of other programs/projects, full cost of adaptation, and results framework, as is discussed in the number of Clarification Requests (CRs) and Corrective Action Requests (CARs) raised in the review.

	<p>The second technical review raises several issues, such as climate change adaptation justification, ESP, duplication of other programs/projects, and full cost of adaptation, as is discussed in the number of Clarification Requests (CRs) and Corrective Action Requests (CARs) raised in the review.</p> <p>The third technical review raises several issues such as compliance with the AF Policy for USPs, cost-effectiveness, duplication of other programs/projects, full cost of adaptation, as is discussed in the number of Clarification Requests (CRs) and Corrective Action Requests (CARs) raised in the review.</p> <p>The fourth technical review clears most of the issues raised in the third technical review have been addressed with a few issues remaining related to updating the PFG form, amendment of the alignment with results framework table, addressing the full cost of adaptation reasoning among others as reflected in the remaining CRs and CARs.</p> <p>The fifth technical review cleared almost all the issues raised in the fourth technical review aside from a decimal placed in the wrong place in the budget and the need for alignment of results areas of the fund at Part II of the proposal.</p> <p>The sixth technical review finds the remaining issues alignment of results areas of the fund at Part II section B and at Part III section A of the proposal.</p> <p>The seventh technical review finds remaining issues with the results framework alignment table.</p> <p>The eighth (final) technical review finds that all remaining issues have been addressed.</p>

(Please refer to CAR1).</p>	<p>CR5: Cleared (Page 36-37). Revised concept note details the consultative process from para 132-138</p>	<p>CR5: (Re-opened). At Part II, Section H, in a sentence or two, please clarify how the information from the consultation to date has informed the elaboration of this proposal.</p>	<p>CR5: Cleared on page 45. A paragraph has been included on how the consultations to date have formed the project design; <i>'The consultations with stakeholders directly informed the design of the ECO Youth Project by identifying priority constraints and opportunities in rural communities, such as limited water access, low</i></p>	-	-	-

		<p>as processing (para 131). Please refer to CAR1 for the adaptation justification.</p> <p>Among actors met were a women's group and the Directorate General for the Environment, it is however unclear to what extent considerations related to AF's Environment and Social Policy were explored.</p> <p>CR5: Given that for instance an initial gender assessment is absent, please clarify how gender and environmental issues were discussed and what was the outcome. Particularly, clarify how the reflections on gender equality that took place during the stakeholder consultations</p>	<p>Please note that the proposal needs to provide a further consultation and its process at fully-developed proposal stage.</p>			<p><i>mechanization, weak soil conservation, and insufficient product processing capacities'</i></p>			
--	--	---	---	--	--	--	--	--	--

		considered context, norms and intersectionality which may be difficult for women. (Please note that this CR is related to CAR2 above.)							
	d. Is the requested financing justified on the basis of full cost of adaptation reasoning?	<p>Not Cleared.</p> <p>CAR5: The proposal does not explain how the project applies the full cost of adaptation reasoning approach. The proposal should clearly illustrate that the project activities are relevant in addressing its adaptation objectives and that, taken solely, without additional funding from other donors (including IFAD's FORCE Jeunes project), they will help achieve these objectives. Even if the</p>	<p>CAR5: Not Cleared.</p> <p>The proposed project will work closely with IFAD's FORCE Jeunes project (USD 24M), which has been granted funding by IFAD (para.123). According to IFAD's website, the total project cost is USD 24.44M including USD 10.07M from IFAD, domestic co-financiers, and Financing Gap of USD 10M. The proposed funding amount for this project is also USD 10M.</p>	<p>CAR5: Not Cleared</p> <p>The revised concept note clarifies ECO Youth project will be in the same location as IFAD's FORCE Jeunes project (USD 24M); However table 9 on the IFAD's FORCE Jeunes implementation it states "<i>This will be achieved through vocational training, apprenticeships, the development of business plans for young people to find employment opportunities and, where</i></p>	<p>CAR5: Not Cleared. The information presented on page 29-32, Table 10 and Paragraph 128 has been added to include Coordination and Synergy Strategy between ECO-YOUTH and FORCE Jeunes project is well noted.</p> <p>However, please clarify, that the objectives and outcomes of the ECO-YOUTH project, will be met based on the resources sought from the Adaptation Fund. Please also clarify if</p>	<p>CAR5: Cleared on page 43.</p> <p>The revised concept states that '<i>ECO-Youth has been designed so that its objectives and outcomes can will be achieved using only Adaptation Fund resources, and the project does not provide for any co-financing</i>'.</p>	-	-	

		<p>project has co-financing, the Adaptation Fund project should be able to deliver its outcomes and outputs regardless of the success of the other project(s). Please refer to The Operational Policies and Guidelines (p.11)</p>	<p>1. Please clarify the relationship between the USD 10M Financing Gap and the proposed project amount, if they are relevant. Please also provide a detailed strategy outlining potential synergies and coordination mechanism between the two project</p>	<p><i>appropriate, become entrepreneurs (including men, women and people living with disabilities in the project's geographical areas) for rural enterprises in the green and blue economy, agriculture, livestock and fisheries sectors.”</i> While the ECO-Youth objective as per paragraph 62 “to improve access to decent jobs for young people through the development of entrepreneurship integrating adaptation to climate change into the economic enhancement of agricultural, livestock and fisheries food systems.” which all fall under green and blue economy. Both</p>	<p>there is any co-financing on which the implementation of the project activities may be dependant, and that if this is a case the AF project will be able to meet its objectives notwithstanding.</p>			
--	--	---	---	--	---	--	--	--

			<p>s, as well as how overlap will be avoided.</p> <p>2. Please also clearly illustrate that the project activities are fully capable of delivering intended outputs and outcomes solely without any additional funding from others. As per the Operational Policies and Guidelines, the</p>	<p>will be done in the same location where the population demographics as per the concept have been described as largely youthful but the assumption is made in the concept is that there will be no overlap. Please kindly provide a detailed strategy outlining potential synergies and coordination mechanism between the two projects.</p>					
--	--	--	---	--	--	--	--	--	--

			proposed project should be able to deliver its outcomes and outputs regardless of the success of the other project(s).						
	1. Is the project / program aligned with AF's results framework?	<p>Not Cleared.</p> <p>The proposal demonstrates the alignment with AF result framework (p.33-34)</p> <p>CAR6: The project result framework must include at least the core impact indicator "Number of beneficiaries including estimations for direct and indirect beneficiaries.</p> <p>CR6: In the column labeled</p>	<p>CAR6: Not Cleared</p> <p>Please include at least the core impact indicator "Number of beneficiaries including estimations for direct and indirect beneficiaries.</p> <p>CR6: Not Cleared.</p> <p>The proposal has not addressed the errors highlighted during the first review. Please address.</p>	<p>CAR6: Cleared (pages 17-18).</p> <p>Number of beneficiaries added</p> <p>CR6: Not Cleared.</p> <p>Kindly use table format provided in the template as per the Operational Policies and Guidelines. revised concept has labels in the table changed and new labels added</p>	<p>CR6: Not Cleared on pages 39-40.</p> <ol style="list-style-type: none"> 1. Please ensure that the grant amount (total activity budget) is reflected in the last column associated with the project objective. 2. Please ensure that the total amounts related to the various 	<p>CR6: Cleared on pages 1-2 on Part III.</p> <p>The grant amount (total activity budget) is reflected in the last column associated with the project objective in the revised concept, and the project outcome level matches the budget, matches the project output level in the results framework.</p>	<p>CR6 (reopened)</p> <p>Please ensure that the project outcomes A, B and C corresponding to the AF outcome level also total 8,342, 978. The same totals should be reflected as well for project outcomes A, B and C at the output</p>	<p>CR6 (re-opened): Not cleared.</p> <p>The total amount of 8,342, 978, should be the total amount for the objective level and its corresponding outcome and outcome indicators. In this case outcome 6 with indicators 6.1 and 6.2 were</p>	<p>CR6 (re-opened): Cleared. As per amendment to results framework alignment table.</p>

		<p>'Fund Outcome Indicator,' 'Output 6.1' appears to be mistakenly labeled and should be 'Indicator 6.1.' Please check the table for such discrepancies and make the necessary correction/s.</p>			<p>indicators at the outcome level, should match those presented in the bottom (output) part of the table.</p>		<p>level. It is ok to keep the objective rows above as is as it represents the overall project. However the component for both output and outcome level should also total 8,342, 978 respectively.</p>	<p>selected. Please enter for indicator 6.1 at the objective level 5, 892, 978.</p> <p>For the components the outcome level and output level correspondence is appreciated. However, at the component level for the outcomes should also add to 8,342, 978 as is the case for the output level, it should also add to 8,342, 978. Currently they add to 2,450,000. Please amend the component figures by their associated outcome and output indicators.</p>	
	2. Has the sustainabilit	Not Cleared.	CR7: Cleared.	CR8: Cleared at concept	-	-	-		-

	<p>y of the project/programme outcomes been taken into account when designing the project?</p>	<p>The Green Financing Mechanism under Component 2 is structured as a shared-cost mechanism, where junior participants contribute 10% and senior participants contribute 40% of their business plan costs, either in kind or in cash (para 90).</p> <p>CR7: Please elaborate on how low-income youth will not be prevented from accessing the mechanism – i.e. will they be able to afford these contributions? This question is particularly relevant given the adaptation related business activities are often perceived as less profitable compared to other businesses.</p>	<p>The revised concept proposal does not reference the Green Financing Mechanism any more.</p> <p>CR8: Not Cleared.</p> <ol style="list-style-type: none"> 1. Please incorporate the response provided in the response sheet into the proposal. Additionally, please refer to CAR1 and CAR5 for further context and alignment. 2. Please also clarify 	<p>stage (page 39-40).</p> <p>While the proposal outlines broad sustainability intentions—such as the strengthening of CRDEs, integration with national policies, and partnerships with IFAD and other donors—further detail is needed on how sustainability will be ensured beyond the project period, particularly in terms of financial viability and local ownership.</p> <p><u>At the fully-developed proposal stage, please:</u></p> <ol style="list-style-type: none"> 1. Clarify how rural youth enterprises and producer groups 					
--	--	---	--	--	--	--	--	--	--

		<p>CR8: The adaptation benefits achieved from the project interventions should be sustainable beyond the project's conclusion. Please detail any strategies outlined in the proposal for enabling replication and/or scaling up using other funds or projects, including IFAD's FORCE Jeunes project, after the project ends.</p>	<p>how the project plans to ensure sustainability in terms of financially sustainable approaches and business models so that the project's investment in productive resources, knowledge and capacity among end-beneficiaries and commu</p>	<p>will continue to operate sustainably after the project ends, including any planned business models, revenue-generating activities, or reinvestment mechanisms.</p> <p>2. Detail how CRDEs will maintain services and infrastructure, including potential funding source</p>					
--	--	--	---	--	--	--	--	--	--

			nities also will be generating revenue, productive income and livelihoods after the project.	s, cost-recovery strategies, or public-private partnerships. 3. Indicate whether the processing facilities, irrigation schemes, or digital platforms supported by the project will have operations and maintenance plans or links to existing service providers. 4. Explain how					
--	--	--	--	---	--	--	--	--	--

				<p>institutional strengthening and policy integration will translate into sustained technical and financial support for youth-led adaptation initiatives.</p> <p>This will help assess the likelihood that the project's investments in infrastructure, skills, and institutions will deliver long-term adaptation benefits and climate-resilient livelihoods.</p>					
	<p>3. Does the project / programme provide an overview of</p>	<p>Not Cleared. The proposal concludes to be classified as</p>	<p>CR9: Not Cleared. 1. While the</p>	<p>CR9: Not cleared The proposed project has been screened</p>	<p>CR9: Not Cleared. Amendments on pages 37-39</p>	<p>CR9: Cleared on pages 49-52.</p>	-		-

	<p>environmental and social impacts / risks identified, in compliance with the Environmental and Social Policy and Gender Policy of the Fund?</p>	<p>Category B. However, it is mentioned that IFAD's categorization was used.</p> <p>CR9: Please clarify if AF's risk categorisation has been used while assessing the environmental and social risks and their alignment with the AF's 15 principles. Guidance on AF's 15 principles.</p> <p>The project plans to establish 3,250 business plans across various sectors, yet the specific business activities are not identified at the proposal stage.</p> <p>CR10: Please clarify how these undefined business activities are expected to contribute to</p>	<p>previous concept indicated that the project would be classified as Category B, the revised concept does not mention the category. Please clearly state the category in the revised concept proposal.</p> <p>2. The ESP checklist table is not properly filled out. In the</p>	<p>against the Environmental and Social Policy (ESP) and Gender Policy of the Adaptation Fund. Based on the initial screening, the project is categorized as a Category B project, indicating that it may have potential adverse environmental and social impacts that are less adverse than Category A projects and can be readily identified and addressed through appropriate mitigation measures. A full Environmental and Social Assessment (ESA) and Environmental and Social Management Plan (ESMP), in line with the Social, Environmental and Climate</p>	<p>Table 11 has been revised and the possible risks that could arise under ESP2 and ESP3 included. However, the risks assessment (low/moderate etc.) are to be identified under column 3 and column 2 should indicate with a check mark or an X no further assessment is required whether further assessment is required or not. Based on the last submission this should be for ESPs 7, 10, 13, 15 and 15, the others should remain blank with the explanation of how the low/risk will be continually monitored/assessed. Please amend.</p> <p>CR10: Cleared as per</p>	<p>Column 2 now only indicates a check mark where no further assessment is required.</p>			
--	---	---	--	--	--	--	--	--	--

		<p>climate change adaptation.</p> <p>Additionally, if the project involves such Unidentified Sub-Projects (USPs), ensure the proposal includes provisions for these USPs to comply with the Environmental and Social Policy (ESP). For your reference, USPs in innovation proposals are acceptable when adequately justified. Please refer to guidance on USPs.</p>	<p>very right column, the risk level should be noted (in bold) together with a description and motivation of the preliminary assessment of the risk level. In the mid-column it should only be checked off (e.g., with an “x”) if for a specific ESP, “no further assessment</p>	<p>Assessment Procedures (SECAP), will be developed during the project design phase.</p> <p>However, the current presentation of the environmental and social risk table (Table 10) includes several instances of descriptive or assumed positive impacts, which are not appropriate in a risk identification section. According to Adaptation Fund guidance, this section should identify potential risks—whether low, moderate, or high—and not highlight presumed benefits. The current framing, particularly under principles such as Access and</p>	<p>amendment to paragraph 83.</p> <p>NEW CAR7: Cleared on page 39</p> <p>Paragraph 152 clarifies the USPs that are undefined ‘<i>the location of the activities, particularly within cooperatives, will be decided during the design phase following community consultations</i>’. The comments from the previous review however still remain</p> <p><i>At the fully-developed proposal stage, include a clear screening and approval process for USPs, consistent with the Environmental and Social Policy (ESP), Gender Policy, and relevant</i></p>				
--	--	---	--	--	---	--	--	--	--

			<p>required for compliance" is needed. Please revise.</p> <p>3. Additionally, while the revised concept proposal includes an assessment based on the AF's 15 principles (Table 9), the assessing for Access and Equity appears to be missing.</p> <p>CR10: Not Cleared.</p>	<p>Equity, Marginalized and Vulnerable Groups, and Gender Equality, appears to assess alignment with project goals rather than risk exposure. This creates a misleading impression of risk absence based on project intent.</p> <p>The project has been classified as Category B. This is fine. Access and Equity is included in the revised concept. This is well received.</p> <ul style="list-style-type: none"> - Under ESP 2 (Access and Equity), the table describes the project's goal to ensure equitab 	<p><i>Fund guidance. This should address:</i></p> <ul style="list-style-type: none"> • <i>Screening procedures and risk categorization</i> • <i>Inform ed consultation with affected communities</i> <p><i>Updating of environmental and social management plans once USPs are defined</i></p>				
--	--	--	--	---	--	--	--	--	--

			<p>The revised concept proposal identifies the prioritized sector and indicates that it will cover all stage of the value chain for climate-smart agriculture.</p> <ol style="list-style-type: none"> 1. Please elaborate on the specific stage. 2. The unknown business and solutions at the proposal stage would be categorized as USPs. Please ensure that the proposal includes provisions 	<p>le access for women and youth, rather than identifying risks such as potential exclusion, unequal benefit distribution, or barriers in implementation that could undermine equitable access.</p> <ul style="list-style-type: none"> - Under ESP 3 (Marginalized and Vulnerable Groups), the text focuses

Project/Programme Background and Context:

Provide brief information on the problem the proposed project/programme is aiming to solve. Outline the economic social, development and environmental context in which the project would operate.

A. Geography

1. The Comoros is an archipelago in the south-western Indian Ocean, 400 km north-west of Madagascar and 300 km from the African coast in the Mozambique Channel. The Comoros is made up of oceanic islands that appeared around 10 million years ago, and several islets in the Indian Ocean. The morphology and dynamics of the islands vary, corresponding to different stages of evolution: Grande Comore is the most recent, with active volcanism. The other islands of the archipelago are aligned along a south-east/north-west axis. The islands, separated by deep underwater channels, are (from east to west): Anjouan (424 km²), Mohéli (290 km²) and Grande Comore (1148 km²). The total surface area of the three islands that make up the Union of the Comoros is 1862 km².

B. Governance and economy

2. The Union of the Comoros, with its government seated in Moroni, was politically unstable until the 2001 constitution established a framework uniting the three islands under a Union government responsible for foreign relations, debt, and national coordination, while granting each island its own governor. In 2018, a constitutional revision centralized presidential powers, allowed two consecutive terms, and replaced the constitutional court with a Supreme Court; Comoros also actively participates in regional organizations like the African Union, IOC, and COMESA.

2-3. The Union of the Comoros is a small, fragile island state, with low growth and high vulnerability to shocks. The country's economic performance is below the average for sub-Saharan Africa. Over the period 2000-2019, growth averaged 2.9% per year. The archipelago's economy remains largely undiversified, undermined by weak infrastructure and a business environment in need of reform. Economic activities are mainly carried out by small-scale players in the informal sector and the diaspora.

3-4. In 2023, the economy grew by around 3%, with domestic activity buoyed by the resumption of large-scale weddings and the associated increase in diaspora arrivals, mainly from France. However, the increase in per capita income was only 0.4%, due to demographic growth (estimated at 2%). The primary sector benefited from higher agricultural prices and favourable weather conditions. Inflationary pressures have eased, with inflation falling from 12.4% in 2022 to 9.2% in 2023¹. Economic recovery from the slowdown linked to the COVID pandemic is set to continue, with growth reaching 3.3% in 2024 and 4.2% in 2025-2026, driven mainly by private consumption and public investment.

4-5. The budget deficit continued to widen in 2023 to around 4.4% of GDP, despite improved domestic revenue mobilization. The deterioration of the fiscal position by 0.4 percentage points of GDP in 2023 is mainly explained by a sharp increase in public spending of 3.5 percentage points of GDP, in particular by the increase in public capital expenditure². The poverty rate is expected to fall slowly to 36.2% in 2026, as the economy continues to grow faster.³

C. Population

5-6. The Comoros is densely populated, with around 465 inhabitants per km², and more than half of the population (53%) of 869,595 (2020) is under the age of 20. High population density puts intense pressure on natural resources and the environment. The social fragility of the Comoros is high: the Human Development Index (HDI) of the Comoros is 0.586 in 2022, placing the country 152nd out of 193 countries.

6-7. The country is ranked among the poorest in the world, with a GDP per capita in 2022 estimated at USD 1,485 and a poverty rate of 45%. The employment rate is only 54% of the population, and over 70% of those in work are poor working

¹ <https://www.banquemondiale.org/fr/country/comoros/overview>

² Ditto

³ World Bank. Macro Poverty Outlook for Comoros. April 2024

people. The Diaspora, estimated at 400,000 people, or around 50% of the population, contributes 25% of the national GDP.

7-8. The primary sector (agriculture, fisheries, and livestock breeding) accounts for 46% of GDP, compared with 12.4% for the secondary sector. It provides 57% of total jobs, 62.7% of which are held by women, and 90% of operating revenues. The country's geographical location and topography also make Comoros one of the most climate-vulnerable countries in the world, with 54.2% of the population living in high-risk areas.

D. Biodiversity and forestry

8-9. The Union of the Comoros has a rich biodiversity that includes some 2,000 indigenous plants, of which around 33% are considered endemic. Biodiversity is one of the basic elements of the country's economy, even more crucial as it is the raw material for any ecotourism development. Ecologically speaking, the Comoros lie at the centre of the triangle of southern Tanzania, northern Mozambique and northwestern Madagascar, now considered the world's second-largest reef biodiversity triangle after Indonesia⁴.

9-10. The Union of the Comoros has a varied but fragile ecosystem that is under serious threat. Environmental degradation is driven by anthropogenic pressures linked to poverty and unsustainable farming practices. These practices include the misuse of inputs, slash-and-burn agriculture, overexploitation of soils, deforestation and the loss of forest cover due to the conversion of land to agriculture. Population growth directly intensifies the pressure on the natural resources, which the population relies on daily for shelter, food and income-generating activities⁵.

10-11. Pressure on natural resources is also evident through poaching of protected species, extraction of coastal materials and environmental pollution stemming from household waste. This pressure is exacerbated by the population's extreme poverty and dependence on natural resources, and the absence of alternatives to traditional production systems⁶. According to the United Nations⁷ practices linked to deforestation have resulted in a sharp decline in forest area, which fell from 31,000 to 3,000 ha between 1950 and 2016, while 15% of plant species are thought to have disappeared over the same period.

11-12. Unsustainable fishing practices have also been observed, jeopardizing the sustainability of fisheries resources, and contributing to food insecurity. This primarily affects vulnerable groups, particularly fishermen, who rely on these resources for their livelihoods and subsistence.

E. Water resources

12-13. In Grande Comore, the high permeability of the soils prevents the existence of permanent water courses, despite the island's abundant rainfall. Although numerous watercourses are found in Anjouan and Mohéli, most of them are seasonal or drying up, due to massive and uncontrolled deforestation of the watersheds. Underground aquifers exist on all three islands, however, they have not been extensively studied, except on Grande Comore, where a portion of these aquifers is being exploited⁸.

13-14. The available water resources would be sufficient to provide a continuous water supply if managed sustainably⁹. Existing surface water supply systems on the islands of Anjouan and Mohéli possess adequate surplus capacity to meet the needs of the current population and accommodate demographic growth. Furthermore, the island of Grande-Comore has an estimated renewable water supply of 1.2 billion m³ per year, with 1.1 billion m³ derived from groundwater. Current exploitation of groundwater, surface water and rainwater collection accounts for 0.5% and 1.9% of the total renewable volume.

Formatted: English (United States)

Formatted: French (France)

Formatted: French (France)

F. Agriculture and food security

14-15. The economy is not very diversified and is based on the agricultural sector, which generates 33.5% of GDP. The country's trade balance is negative, with a deficit of 20.7% of GDP. The primary sector (agriculture, fishing and livestock breeding) accounts for 46% of GDP, against 12.4% for the secondary sector, and provides 57% of total employment, 62.7% of which is held by women. It provides around 90% of export earnings from a very limited range of cash crops (vanilla, cloves and ylang-ylang), which are heavily affected by market fluctuations¹⁰. Despite the importance of agriculture in the Comoros economy, 75% of the country's food requirements are met through imports.

15-16. The low level of agricultural production can be explained by a number of factors: i) the small useful agricultural area, less than 100,000 hectares; ii) the complete absence of mechanized tillage, limiting the area farmed; iii) the isolation of production areas; iv) difficulties in accessing seeds and other agricultural inputs due to inadequate credit system; v) insufficient irrigation infrastructure for off-season production; vi) the weakness of agricultural extension and applied research systems; vii) the aging farming population¹¹.

16-17. The clearing of forest areas for agriculture has also aggravated soil erosion and degradation and contributed to the depletion of water resources. Extreme events such as Cyclone Kenneth, which hit the archipelago in April 2019, caused agricultural losses estimated at 60% of food crops and 30% of cash crops.

17-18. Nearly all arable land has been appropriated for use. In Grande Comore and Mohéli, the proportion of cultivated land to potential is 70%. This rises to 80-90% for Anjouan (FAO/BM, 2013). Throughout the entire territory, only 43% of cultivable land is arable and 30% is occupied by permanent crops. Annually, agricultural land area decreases due to factors such as soil degradation and urbanization (FAO, 2007).¹²

18-19. The Comoros does not suffer from chronic famine. However, the prevalence of food poverty (proportion of the population unable to meet the minimum caloric intake (< 1800 Kcal/day)) remains very high, affecting 25% of the population. The same applies to the prevalence of food insecurity, which affects 35% of the population¹³.

19-20. Vulnerability to natural disasters has a direct impact on food supply risks and availability. The country has suffered prolonged droughts (80% dry years, 20% wet years, from 1991 to 2000), an overall decrease in rainfall over the last few decades, a rise in average annual temperatures, and a shift in seasons.

20-21. International crises and conflicts have had a direct impact on food security in the Union of the Comoros, particularly before the Russian-Ukrainian crisis. Prior to this event 22.4% of the population was severely food insecure, and 22% moderately so (INSEED, 2020). The situation has since been exacerbated by the ongoing conflict, in 2022, it was reported that around 33% of Comorians were in absolute food poverty, and around 31% of children were stunted and 25% underweight¹⁴.

G. Historical climate trends and projections

21-22. The country has a humid tropical climate influenced by the sea, with two main seasons:

- A warm and humid southern summer season, from mid-November to mid-April, with an average temperature of around 27°C at low altitudes, with highs between 33 and 35°C and lows around 21° and 24°C;
- A cool, dry southern winter season from mid-June to mid-October, with an average temperature of 23°C at low altitudes and maximums between 27 and 29°C.

22-23. The Comoros is also subject to north to north-westerly monsoon winds known as "kashkazi", which are variable and weak, but stronger in January and February (the hottest months). Comoros ranks 97th on the global climate risk index for 2021. The frequency of extreme climatic and meteorological events such as tropical storms, floods, heat waves and

¹⁰ COMPACT 2023-2028

¹¹ COMPACT 2023-2028

¹³ Commissariat Général au Plan. 2020. Voluntary national report of the Union of the Comoros to the High-Level Political Forum on Sustainable Development, 2020 edition.

¹⁴ Ditto

droughts, landslides, volcanic eruptions and droughts has increased slightly and are the main hazards impacting the Union of the Comoros, causing both human and material damage. These hazards are likely to seriously compromise the development efforts undertaken by the country in recent years and accentuate the vulnerability of certain ecosystems and groups of already fragile populations.

23-24. The graph below shows average monthly minimum, mean and maximum temperatures over the period 1991-2022, as well as average monthly precipitation over the same period¹⁵.

Formatted: Caption, Indent: Left: 0"

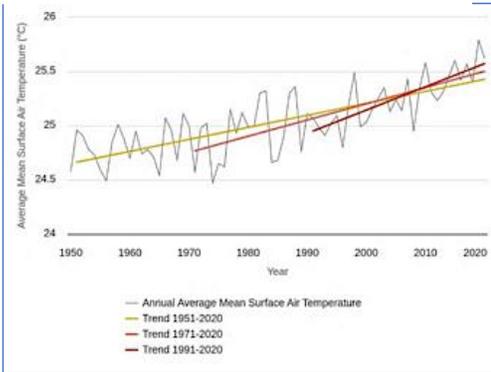

Formatted: English (United States)

Formatted: Caption, Indent: Left: 0"

24-25. **Temperatures.** The average temperature varies between 21.62°C and 25.26°C. The hottest months are June, with an average temperature of 25.26°C, July with an average temperature of 25.19°C, and August with an average temperature of 25.12°C.

¹⁵ <https://climateknowledgeportal.worldbank.org/country/comoros>

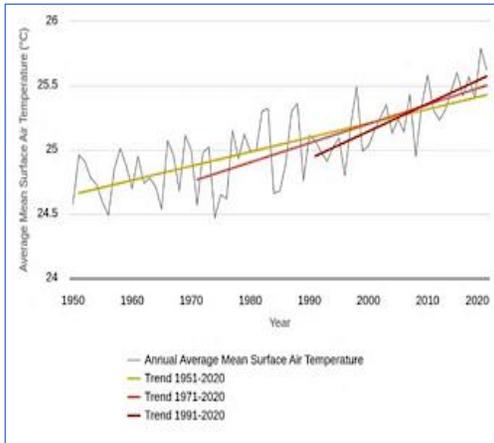

3- [Figure 3 Trends in mean surface air temperature with significance of trend per decade 1951-2020, Comoros](#)

Formatted: Caption

Historical data for the period 1951-2020 show an upward trend in mean temperature.

Formatted: Indent: Left: 0"

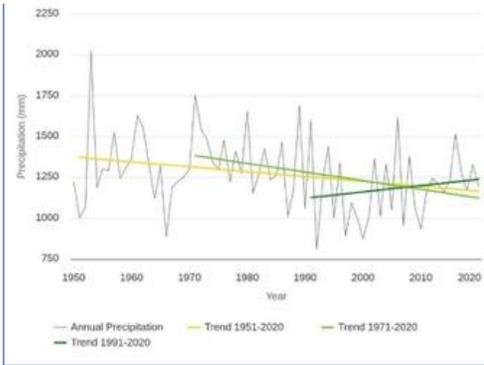

25-26. As shown in Figure 2, the trend for the period 1951-2020 is an increase of 0.11°C per decade. The trend for the 1970-2020 period is an increase of 0.16°C per decade, while the trend for the 1991-2020 period is an increase of 0.22 per decade. We can thus see that the temperature increase trend is stronger, rising from 0.11°C to 0.22°C.

26-27. Precipitation. The wettest months are January, February and March, with monthly averages of 313mm (January), 269mm (February) and 264mm (March). September, October and November are the driest months, with average rainfall of 64 mm, 90 mm and 98 mm respectively.

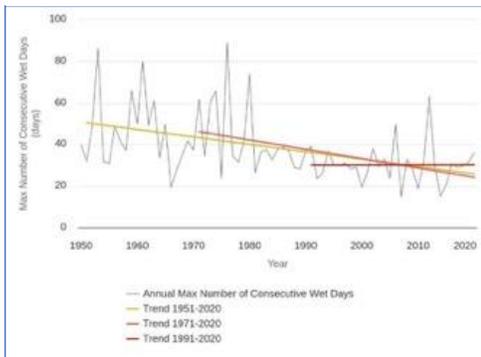

27-28. As Figure 3 shows, precipitation is tending to fall. While over the period 1951-2020, the downward trend is -25.28mm per decade, it is -51.22mm per decade for the period 1971-2020, but +77mm per decade for the period 1991-2020. However, the latter trend would not be significant (77% probability vs. 98% for the other trends).

Figure 43: Annual rainfall trends with trend significance by decade 1951-2020 Comoros

28.—The annual trend in the maximum number of consecutive wet days for the period 1951-2020 shows a downward trend, as shown in Figure 3, with -2.84 consecutive wet days per decade. The maximum number of consecutive dry days for the period 1951-2020 (Figure 4) confirms the above trend in that this number would increase, with a very high probability, by around 1.19 days per decade.

Formatted: Normal (Web), Space After: 0 pt

Figure 7 Projected mean surface air temperature (ref. period 1994-2014) Multi-model ensemble

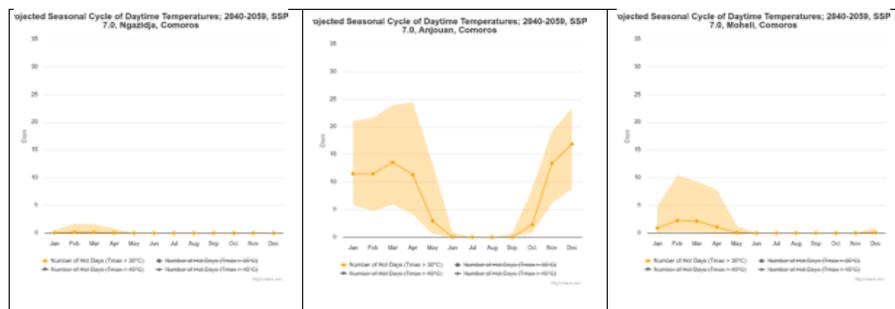

29-30. Temperatures. Average temperature projections vary from model to model but are always on the rise. Thus, according to the SSP3 7.0 model, the average temperature should increase by one degree in 2050, compared with the reference year 2014. Climate projections obtained using other global climate models show that mean annual temperature is set to rise by 0.8 (RCP 2.6) to 2.1°C (RCP 8.5) by 2060, and by 1.2 (RCP 2.6) to 3.6°C (RCP 8.5) by 2090.¹⁶

30-31. The extreme heat conditions. The season cycle allows to understand when in the year specific threshold conditions are more likely to be surpassed. The duration of the "heat season" is likely to increase in future decades. The below projected seasonal cycle of daytime temperatures, for the 2040-2059 period, highlights the differentiated projections between the three islands, Anjouan being the most affected by the successive months with high counts of heat.

Figure 6: Projected Seasonal Cycle of Daytime Temperatures: 2040-2059, SSP 7.0, Comoros

Figure 8 Projected Seasonal Cycle of Daytime Temperatures: 2040-2059, SSP 7.0, Comoros

31. Precipitation. Projections for average annual precipitation show a wide range of changes, covering both negative and positive changes. Seasonal projections foresee a reduction in precipitation during April to December to November and an increase during the rainy season, particularly the months of January to March. According to the SSP3 7.0 scenario, average annual precipitation is set to increase by 1% in 2050. According to the IPCC, through the projections of the

Atmosphere-Ocean General Circulation Model (AOGCM), climate change scenarios for the small islands of the Indian Ocean, for the period 2040-2069, indicate:

— An increase in average annual precipitation of 3.1% (+ or - 0.45%). However, the decline varies between -2.6% and -1.8% during dry periods (June-August)

32.

H. Impacts of climate change

The impacts of climate change on agriculture, livestock and water resources have been identified in the National Adaptation Programme of Actions (NAPA) and are summarized in the table below.

Table 1 Impact of climate change

Sector	Impact
Agricultural resources	<ul style="list-style-type: none"> - Delayed fruit ripening due to prolonged drought and high temperatures. - The reproduction cycle of crop pests coincides with the harvesting period and leads to crop destruction. - Appearance of new diseases such as the coconut whitefly (<i>Aleurotrachelus atratus</i>) leading to a drop in production and incomeincome. - Whitefly also deposits fumagin on associated crops (vanilla, banana, etc.), compromising photosynthesis. - Development of cercosporiosis (<i>cercospora fijiensis</i>) on banana, resulting in major crop losses, reduced income and increased food insecurity. - Land degradation accelerated by climate variability - Reduced grazing due to grass desiccation caused by prolonged droughtdrought. - Fallow land disappears, limiting forage production capacity. - Diminishing water resources reducing watering possibilitiespossibilities. - Under-nourishment of livestock and high susceptibility to parasitic attacks and epidemics
Fishing resources	<ul style="list-style-type: none"> - Low level of recovery of demersal species, - Steady decline in catch size. - Abnormal rise in ocean temperatures leading to high coral mortality. - Coastal erosion and accelerated decline in inshore fishing. - Substantial post-harvest losses due to high temperatures, lack of product preservation facilities and limited outings during cyclones and heavy rains. - The result is a chronic shortage of fish on the market.
Water resources	<ul style="list-style-type: none"> - Climate variability has a negative influence on the quantity and quality of water resources through reduced rainfall. - Variations in rainfall, seasonal shifts and prolonged droughts lead to early water shortages, andshortages and worsen hygiene conditions. - High temperatures increase actual evapotranspiration, reducing the rate of groundwater recharge. - In Grande-Comore, rising sea levels increase the salinity of the water table. - Anjouan and Mohéli are fed mainly by river water: the decline in rainfall is reducing the hydrographic network. - The quality of river water is altered by the products of erosion, discharges of faecal matter, household waste and others.

32-33. Moreover, sea level is expected to rise by 4 mm per year over the next fifty years, corresponding to a potential average rise of 20 cm by 2050, twice as much as the rise observed over the last hundred years (20 to 25 cm)¹⁷.

Formatted: English (United States)

I. Vulnerabilities in the national strategy to combat climate change

33-34. Climate risks are numerous, and their impact can vary from one island to another. The table below shows the vulnerability of each island to climatic risks.

Table 2: Risks and vulnerability of the islands
 Table 2 : Risks and vulnerability of the islands

Risk \ Island	Grande Comore	Anjouan	Mohéli
Sea level rise	Some coastal areas, especially in the eastern part of the island	Coastal areas (particularly the peninsula and eastern part of the island)	Coastal areas, especially eastern parts of the island
Tropical cyclones	No major risk for the Union of the Comoros as protected by Madagascar, but winds and storms	South-east of the island opposite Mayotte	No major risk for the Union of the Comoros, protected by Madagascar, but winds and storms all over the island.
Flooding	Southwest	Presqu'île: Bimbini, Vassi, Nord: Hajoho, and Centre Est: Domoni West coast: Pomoni and Moya	Coastal areas mainly, northeast (Fomboni), northwest Miringoni, Ouallah
Landslide	Southwest and southeast flanks of the Karthala massif	Southwest (Pagé to Maraharé; Moya)	North
Ocean upwelling	North and North-East; Central and South	South and North	Coastal zones
Coastal erosion	Southeast (Foumbouni) and Northwest	Southwest (Pagé to Pomoni) and Northwest (Domoni, Ouani- and central east coast)	Coastal areas, especially coastal - East (Fomboni, Djoiézi), and Northwest, Miringoni
Drought	Important West-central coastline and northern part of the island	North part	North part
Salinization of soils and drinking water supplies	Coastal zones	Southern coastal areas	Coastal zones
Soil erosion	Whole island	Whole island (especially west, east and south)	Whole island (especially in watersheds)
Deforestation	Important in all forested areas from the north to the south of the island, especially in the eastern part.	Forested areas, eastern part of the island	Forested areas all over the island

ECO-YOUTH contribution to the ~~lanned~~ 2020 NDC's planned adaptation measures planned in the 2020 NDC and the 3rd Communication to UNFCCC

35. Vulnerability analyses highlight the high exposure of the country's productive sectors to climate hazards, notably agriculture and biodiversity, forestry, coastal zones, fisheries and water resources. To address these vulnerabilities, the Country outlined adaptation targets for the sectors most vulnerable to climate change in the NDC 2015, which were updated in the revised NDC 2020. The table below presents the adaptation actions defined in the NDC in those sectors of direct interest to the ECO-YOUTH Project.

Table 3: Extract from the Table of priority adaptation actions defined in the 2020 NDC

Sector	Adaptation Actions
Agriculture and livestock	Development of a climate-smart and resilient agricultural policy

Formatted Table
 Formatted: Left

	Development of agro-pastoral irrigation
Biodiversity and forests	Extension of the surface area with protected area status
	Extension of reforested area
Fisheries and coastal and marine ecosystems	Monitoring and restoration of marine and coastal ecosystems
	Raising awareness and making fishermen more secure in the face of climatic hazards
Water resources	Access for the population to an improved water source
	Dissemination and adoption of the principle of integrated water resource management
	Implementation of a system of building standards that takes disaster risk into account
Mainstreaming and awareness-raising	Raising awareness of the impacts of CC
	Capacity building at all levels to define and implement CC adaptation measures

36. ECO-YOUTH will contribute directly to some of the following priority adaptation measures identified above by the 2020 CDN in 2020:

Formatted: English (United Kingdom)

Formatted: Indent: Left: 0"

- **Agricultural and livestock sectors:** ECO-YOUTH will contribute to developing a climate-smart, resilient agricultural policy, through the institutional support to the Ministry of Agriculture, Fisheries, a ~~nd Handicrafts~~ ~~Handicrafts~~ ~~Livestock and Food (META)~~ for the integration of climate change adaptation into the relevant sectoral policies and strategies (ECO-Youth Component C, Outcome C.1: Support for policy instruments and the institutional framework. This action will be supported, ~~on~~ the field, by the promotion of Green business partnerships to promote the **Enhanced Climate Adaptation in Agriculture and Fisheries** (Component B, Outcome 2.1). Regarding the development of agro-pastoral irrigation, ECO-YOUTH, under Component A, will support the creation of climate-resilient infrastructures in the agro-sylvo-pastoral and fisheries sectors.;

- **Biodiversity and forests sectors:** regarding the extension of reforested area, ECO-YOUTH will encourage agroforestry practices and better water management (Component B, Outcome B1).;

Formatted: Bulleted + Level: 1 + Aligned at: 0.25" + Indent at: 0.5"

- **Fishing and coastal and marine ecosystems,** the NDC foresees raising awareness and protecting fishermen from climatic hazards. ECO-YOUTH will contribute to this adaptation action through awareness-raising activities to support the creation of climate-resistant infrastructure and enable young entrepreneurs in the fishing industry to empower themselves. (Component A, Output A.2.1).;

Formatted: Font: 9 pt

Water resources: thanks to the creation of climate-resilient infrastructures in the agro-sylvo-pastoral and fisheries sectors (Component A, Output A.2.1) ECO-YOUTH responds to the NDC actions for population access to an improved water source. In the same context, ECO-YOUTH take into account NDC's need to disseminate and adopt the principle of integrated water resource management, through CRDE's capacity-building activities in sustainable resource management (Component A, Outcome ~~Result~~ A.1 Strengthen and diversify the training offer).;

- **Integration and awareness raising:** as shown above NDC's planned actions on Capacity building at all levels to define and implement CC adaptation measures find an echo in ~~ECOECOECO~~ ECO-YOUTH through the activities envisaged under Component A, Outcome A.1 Strengthening and diversifying the training offer, as well as under Outcome A.2. Development of entrepreneurial and employment initiatives.

Formatted: English (United States)

37. The Third National Communication to the UNFCCC of 2023, drawn up after the revised 2020 NDC, provides more details on the adaptation measures the CDN identified in the various sectors: agriculture, livestock, fisheries, forestry and water. The table below maps the project components and outcomes that will contribute directly to the implementation of some of the Adaptation Measures identified by the country.

		Output B.1.1 Green and climate resilient technologies and Climate smart agricultural practices promoted
Water	Collecting rainwater and promoting small-scale water schemes	Outcome A1 Strengthening, greening and diversifying the training offer
	Putting integrated water resource management (IWRM) into practice

J. Initial gender assessment

38. A preliminary gender assessment was carried out during the preparation of this concept note and the findings of the assessment are being integrated into the project activities and will be reinforced by the full gender assessment to be carried out at the full project proposal stage.

39. **Gender equality.** The increase in girls' schooling has not significantly impacted the women's illiteracy rate, which remained unchanged (Grande Comore: 23.7%; Anjouan: 47.7%; Mohéli: 42.6%). This affects women's entrepreneurial momentum, with their access to credit being lower and at a later age (40 years) compared to men (20 years), despite the presence of appropriate financial institutions. These various factors, combined with women's status, jeopardize their employment, especially in rural areas. This situation is amplified by shocks related to climate change and health crises such as COVID-19. Survival practices exacerbate deforestation and reduce cultivable surfaces, resulting in underemployment, under-production, and an increasingly weak agricultural growth rate. All of this disproportionately affects women and girls in vulnerable households, in addition to food insecurity and its resulting effects (African Development Bank19, 2023). 20.7% of women aged 20–24 years old were married or in a union before age 18. However, work still needs to be done in the Comoros to achieve gender equality. The adolescent birth rate is 74.4 per 1,000 women aged 15-19 as of 2017, up from 70.27 per 1,000 in 2011. As of February 2024, only 16.7% of seats in parliament were held by women. In 2018, 8.2% of women aged 15-49 years reported that they had been subject to physical and/or sexual violence by a current or former intimate partner in the previous 12 months (World bank, 2024)20

40. **Gender, employment and economic activities.** In the Comoros, the labour force participation rate among females is 33.1% and among males is 55.4% for 2023 in the public and semi-public sector, generally in subordinate positions. Only 4.8% of working women are employers. Although women account for around half of the total population (49.6%), they are still under-represented at all levels, except in the agricultural sector, where they hold 63% of jobs in food production, market gardening and poultry farming. They do very little in marketing, unlike in the fishing industry, where they are more involved in selling fish. But these areas of activity are still informal, and informal and insecure employment is more common among women. For example, more women (56.1%) than men (47.5%) are self-employed, and 47% of the unemployed in Comoros are women.

41. **Land ownership.** Matrilineal filiation allows Comorian women, generally the eldest, to inherit land and houses (manyahuli), which form an undivided patrimony handed down from mother to eldest daughter. But actual use and control remain in the hands of men: husbands, brothers, maternal uncles. Women inherit land and productive assets from their fathers and mothers, but the management of these assets involves the man as head of the family. In 2017, 32% of women owned land, compared with 58% of men. This can be explained by the institution of the "grand marriage" custom, which sees "accomplished men" (mdrou mdzima) become official decision-makers in the city, while women are confirmed in their position as head of the household. In this context, customs hinder rural women's use of their land to access credit or capital.

42. **Gender, environment and climate change.** The impacts of climate change (land and forest degradation, erosion, water stress, natural disasters) are leading to a scarcity of resources, making it more difficult for women, whose livelihoods in rural areas depend largely on natural resources (water, forest products, agriculture), to carry out their activities. Women's ability to adapt to climate change is undermined by their lack of access to the economic and productive resources outlined above. The NDC recognizes the importance of gender mainstreaming in climate change adaptation policies, and notes that the National Emergency Preparedness and Response Plan has taken gender into account in the education and protection sectors. The NDC is committed to improving the participation of women and all other vulnerable groups in the planning and

¹⁹ BAD, 2023, Union des Comores, Profil de genre, genre, autonomisation des femmes et amélioration des conditions de vie, BAD.

²⁰ World Bank, 2024, Comoros, Gender Portal. <https://genderdata.worldbank.org/en/economics/comoros>

decision-making process, as well as in capacity-building in terms of education, training and access to technologies for adapting to climate change. The nexus between gender, environment and climate change will be further assessed during the design phase and appropriate measures will be mainstreamed in the project interventions to ensure gender equality in the face of economic and climate shocks.

43. **Legal framework.** The country has ratified the main international instruments on women, in particular particularly the Convention on the Elimination of All Forms of Discrimination against Women (1994) and the Protocol to the African Charter on the Rights of Women (2004). The Union of the Comoros has ratified them without any reservations, undertaking to apply them as soon as they have been ratified. The Union of the Comoros joined the Beijing Platform in 1995, the African Union's Vision 2063 and the United Nations' 2030 Agenda for Sustainable Development, reflecting the political will of its leaders to promote gender equality and the empowerment of women and girls.

34. At national level, the 2018 Constitution confirms and guarantees women's rights, equal remuneration for equal work and the right of access to local and national political bodies. The Family Code sets 18 years as the minimum legal age for marriage and prohibits forced marriages. The Labour Code prohibits gender-based discrimination in recruitment and all other decisions relating to working conditions. The Labour Code protects pregnant workers and combats harassment, shifting the burden of proof to the alleged perpetrator. The law on the general status of civil servants condemns all forms of discrimination. The Electoral Code provides for the same right to vote and stand for election for both genders, and the law on the organisation of municipal elections requires both genders to be equally represented on municipal lists.

44. **Effectiveness of law enforcement.** The analysis of the texts revealed, on the one hand, inconsistencies between the texts adopted and, on the other hand, a lack of conformity of these texts with international instruments. For example, the Family Code grants men the right to polygamy, the moral and material leadership of the family, and the right of repudiation, while a woman seeking an out-of-court divorce must pay her husband compensation (Khol). The Nationality Code allows only men to transmit their nationality to their foreign wives. These provisions contradict the principle of equality between men and women as stated in the Constitution. The reason for these inconsistencies lies in the fact that, due to the specific history of the Comoros, modern law coexists with customary law and Muslim law. These various sources of Comorian law are not always consistent with each other and may come into conflict. For example, even though modern law recognises equality, it conflicts with other legal sources (such as customary law) and fails to assert itself. Religion and tradition sometimes set themselves up as the reference standard. This situation delays the elimination of certain gender inequalities and makes it difficult to implement policies aimed at gender equity and equality.

45. **Policy framework.** The Union of the Comoros has adopted the 2017 National Gender Equity and Equality Policy (PNEEG2), which consolidates the achievements of the previous policy (PNEEG 2007). The policy has the following objectives: (i) to remove economic and social obstacles so as to promote the participation of the entire population, regardless of gender, in economic development initiatives; (ii) to enhance the value of women's activities, which contribute to wealth creation; (iii) to increase opportunities so as to eliminate gender disparities and improve their capabilities; (iv) to effectively coordinate the various institutions with a view to training and informing. However, the analysis of the gender equality and equity situation carried out in 2017 as part of the update of the 2007 National Gender Equity and Equality Policy reveals that the values, practices and modes of social organisation severely limit the effects of the actions undertaken to reduce gender disparities and inequalities in Comoros. The National Gender Policy recognizes the obstacles to full equality of rights between men and women due to the coexistence of three types of law: positive law, Muslim law and tradition. In this context, the PNEEG2 defined 5 new priorities: i) strengthening the legal and institutional framework for promoting gender equality, ii) integrating this dimension into public policies, iii) empowering women by promoting their activities and supporting entrepreneurship, iv) involving women in decision-making bodies through political and legislative measures, and v) reducing gender-based violence. These priorities have been taken up by the various economic and social development policy frameworks of the Union of the Comoros, including in particular the Strategy for Accelerated Growth and Sustainable Development (SCA2D) 2018-2021 (O.S.14. Promoting gender equity and equality, included in Axis 3: Consolidation of governance and promotion of state based on the rule of law), the Plan Comores Émergent 2020 - 2030, one of the specific objectives of which is to promote the health of young people and adolescents and combat all forms of gender-based violence, exploitation and exclusion; and the Interim Development Plan 2020 - 2024 which, in terms of gender equality, sets the objective of seeing the gender equality index increase over the decade 2020-2030, with this index standing at 0.25 in 2019. It should be noted that the gender index in Africa has been limited to three dimensions: the economic dimension, the social dimension, and the dimension of empowerment and representation (both political and institutional).

47. To address multiple challenges, during the project proposal design phase, the team will conduct a comprehensive gender analysis examining the roles, responsibilities, needs, challenges, barriers, and opportunities for women within the

project's economic, social, political, and cultural contexts. The analysis will also explore social norms and attitudes related to gender-based violence.

48. Based on the gap analysis, the team will develop a Gender Action Plan aligned with gender inclusion policies of both the Adaptation Fund and IFAD. In terms of project targeting, rural women will constitute 50% of the project's beneficiaries, and value chains will be selected based on their potential to support women's and youth livelihoods while enhancing resilience to climate change.

J.K. Intervention area and target groups

36-49. **Area of intervention.** With a national scope, ECO- Youth will operate in 66 poor or vulnerable villages or localities on the three islands: 22 on Anjouan, 17 on Mohéli and 27 on Ngazidja (Grande Comore). This targeting represents 20% of the country's localities and is delineated within eight poles of concentration (PCs): two on Grande Comore and three on each of the islands of Anjouan and Mohéli. These PCs are territorially circumscribed within the zone of influence of the Rural Economic Development Centres. (CRDE), as shown in the table below.

Table 5: Distribution of clusters

Concentration hub	No. of locations	Proportion
Grande Comore		
1 Mbadjini Sud zone - Simboussa CRDE	10	
2 Bambao zone (Cent-e) - Sereheni CRDE	17	
<i>Sub-total Gde Comore and proportion island</i>	27	13%
Anjouan		
3. Nyumakele High and Intermediate Zone - Mrémani CRDE	11	
4. Zone Sma - Boungweni CRDE	7	
5. Plateau Koni and Mjilimé zone - Tsembehou CRDE and Bambao Mtsanga CRDE	4	
<i>Subtotal Anjouan and proportion island</i>	22	24%
Mohéli		
Zone Djando - CRDE de Mibani	6

50. **Target group.** The project's beneficiaries are the rural poor aged between 18 and 35 (33.7% of the population), whose integration in the production and wealth creation processes is limited or non-existent. These young men and women may have no vocational training but be actively engaged in agro-sylvo-pastoral, fishing and other production activities on family farms or within Producer Organizations (POs), or they may have a minimum level of training but be unemployed.

51. In all, ECO-Youth will directly target around 4,950 young people from around 4,000 rural households with low incomes or vulnerable to poverty. Within these households, it will indirectly impact more than 20,000 people (the average family size is around 5 people). More precisely, ECO-Youth will work with or will support the creation of rural Professional Organisations (POs) of about 25 young people each, organised, for example, as cooperatives or associations. In this sense, if the direct beneficiaries are the young men and women, they will have access to ECO-Youth support through their respective rural organizations, except the first steps of ECO-Youth implementation, consisting in awareness raising activities among the villages in view of orienting young to be trained (under Component1, Outcome 1.1).

52. The Table 4 below presents the demographic data of the 66 villages that ECO-Youth will target in the three Islands. ECO-Youth plans to target, or create 3 POs per village, of 25 Young people each. Depending on the number of villages per

island, ECO-Youth anticipates reaching 1,450 young people in Anjouan (29%), 2,675 in Grande Comore (53.5%) and 875 in Moheli (17.5%). This preliminary breakdown will be refined during the design phase, the project.

Table 6: ECO-YOUTH Demographic Data

Iland	Zones	Villages	Male	Female	Total population	Young (18 ans and older: ratio 56.6%)	Number of young people targeted by the project (3 groups of 25 young people per village (i.e. 3 rural youth businesses)

37-53. In line with the project's gender focus, women will account for 50% of the young people directly benefiting.

Formatted: Tab stops: Not at 2.46"

38-54. The targeting approach is based on the principle of social inclusion, in line with national standards favouring the integration of people with disabilities (PWD) into economic activities. This category will represent 1.5% of young people, or around 75 individuals. The inclusion approach will be promoted through the innovative Gender Action Learning System for Gender equality and climate change adaptation (GALS+), which promotes empowerment, adaptive capacities, climate resilience, nutrition and gender equity in associations, cooperatives, and communities. It will be integrated into training modules at training, learning and incubation centres.

39-55. The quota system will be used to ensure that young women are targeted. Awareness-raising and communication sessions specifically for young women will be organised to ensure strong interest on their part.

56. The targeting strategy aims to: (i) ensure that young people, and especially the most vulnerable, are the recipients of project support; (ii) identify motivated young people in the agricultural sector to facilitate networking and job market stimulation; (iii) establish gender equality in POs and rural enterprises, through the use of innovative, participative and interactive methodologies such as GALS+; (iv) promote agro-sylvo-pastoral and halieutic and processing models favourable to young women. To this end, the targeting approach will involve in each PC: POs, rural cooperatives, youth organizations (youth for peace; women's associations, associations of young women entrepreneurs, etc.), associations of disabled people, associations specializing in the education and integration of young people (ASCOBEF, ONG 2 Mains, etc.) and local authorities, taking into account their representative and inclusive nature.

57. **Theory of change.** The ECO-YOUTH Project seeks to tackle the dual challenges of youth unemployment and climate change by integrating sustainable entrepreneurship into agriculture, livestock, and fisheries. By addressing structural barriers such as low productivity, outdated techniques, and weak governance, the project provides young people with the necessary skills, resources, and market access to establish climate-resilient businesses.

58. Through capacity building, policy support, and green business partnerships, the project empowers youth to drive economic growth while reducing environmental degradation. The introduction of climate-smart technologies and sustainable practices alleviates pressure on natural resources, enhances food security, and builds resilience against climate variability.

59. A key assumption of the project is the willingness of local communities and institutions to support youth participation in climate adaptation. With strengthened policies and institutional frameworks, the project ensures long-term sustainability by embedding climate resilience into governance structures. The combination of training, market facilitation, and policy interventions creates a self-sustaining ecosystem where young entrepreneurs contribute to economic development while protecting the environment.

60. The diagram below summarizes the project theory of change, illustrating overall project logic, Objective, components, outcomes, outputs, the assumptions necessary for its success, and the barriers the project aims to address and challenges.

Project objective Improve access to decent jobs for young people through the development of entrepreneurship integrating adaptation to climate change into the economic enhancement of agricultural, livestock and fisheries food					
Component A. Capacity building and green entrepreneurial and employment initiatives		Component B. Green business partnerships and sustainable employment opportunities		Component C. Strengthening of the policy and institutional framework for the greening of youth employment in rural areas	
Outcome A.1 Strengthening, greening and diversifying the training offer	Outcome A.2. Development of entrepreneurial and employment initiatives	Outcome B.1 Enhanced Climate Adaptation in Agriculture and Fisheries	Outcome B.2 Supporting access to the market	Outcome C.1 Support for policy instruments and the institutional framework	Outcome C.2. Monitoring, evaluation and knowledge management
Outputs 1. Three Rural Economic Development	Outputs 1. Capacity-building for young people in sustainable agriculture	Outputs 1. Green and climate resilient technologies and Climate smart	Outputs 1. Product marketing facilitation	Outputs 1. Relevant sectoral policies and strategies supported	Outputs 1. A M&E strategy put in place

Centres (CRDE) recalibrated regarding adaptation to climate change. 2. Climate resilient assets secured	and fisheries achieved. 2. Young rural producer organizations set-up	agricultural practices promoted 2. Processing of agricultural and fisheries products enhanced	2. Performance tracking and feed back	2. Key institutions supporting climate-adapted businesses for rural youth are strengthened	2. Knowledge products created and disseminated		
Assumption 1 Good governance		Assumption 2 No major climate natural disasters or epidemics		Assumption 3 Local communities understand the importance of young involvement in climate resilient agricultural development		Assumption 4 Targeted young men and women are aware of the social and economic opportunities offered by the climate smart agriculture	
Barrier 1 Absence of alternatives to traditional production systems	Barrier 2 Low level of agricultural production and productivity	Barrier 3 Complete absence of mechanized tillage.	Barrier 4 Limited area farmed	Barrier 5 Low income	Barrier 6 Low capacities and inadequate policies	Barrier 7 Lack of gender responsive solutions for addressing adaptation needs to climate change	Barrier 8 Weak governance structures for climate change
Problem statement Population's extreme poverty, depending on natural resources; Intense human pressure on natural resources and the environment, Land degradation accelerated by climate variability; Unsustainable fishing practices; Aging farming population and high rate of young unemployment.

PART II: PROJECT / PROGRAMME JUSTIFICATION

A. Describe the project/programme components, particularly focusing on the concrete adaptation activities of the project, and how these activities contribute to climate resilience. For the case of a programme, show how the combination of individual projects will contribute to the overall increase in resilience.

42-62. ECO-Youth include the following components and sub-component ~~Outcomes components components components~~:

Component A. Capacity building and green entrepreneurial and employment initiatives

43-63. Agricultural entrepreneurship will improve employment for young people and women in the ~~Comoros, and~~ Comoros and ensure their participation in wealth creation at all stages of the value chain for climate-smart agriculture. To achieve this, it is essential, on one hand, to strengthen the infrastructure and equipment of national ~~structures-institutions~~ such as the Rural Economic Development Centres (CRDE) CRDE and the National School of Fishing and Merchant Marine (ENPMM), ~~as well as the technical platform for training and support for agricultural entrepreneurship, and~~ to upgrade training contents in line with climate change adaptation, to secure access to land for the young men and women who will benefit from the project, and to manage this land to develop climate-smart agriculture.

44-64. ~~Despite the diversity of players, the Rural Economic Development Centres (CRDE),~~ under the operational supervision of the Union of the Comoros' Ministry of Agriculture, Fisheries, and Handicrafts, remain the main providers of advisory services for farmers and agricultural professionals.

45-65. CRDE's mission is to cover a wide range of thematic areas, from producer demand for advisory support to the promotion of facilitation tools for the production, supply and purchase of services. The CRDE network also plays a role in centralizing information for the management and dissemination of agricultural strategies defined by the Government of the Union of the Comoros. However, the CRDEs suffer from insufficient resources to fulfil their mandates and ensure a greater contribution to the development of entrepreneurship and the strengthening of climatic resilience, which are among the major challenges facing Comorian agriculture. Upgrading the selected CRDEs would make them reference centres for partnerships with the private sector and civil society to promote concrete, concerted action in terms of sustainable agricultural development for the benefit of young people and women.

Sub-component ~~Outcome~~ A1 Strengthening, greening and diversifying the training offer

Output A.1.1: Three Rural Economic Development Centres (CRDE) are recalibrated regarding adaptation to climate change

Output A.1.2: Climate resilient assets secured. Technical platforms for training, apprenticeship and incubation are strengthened

46-66. In light of the demand for training and the capacity of existing facilities, ECO-Youth will focus on improving the training ~~and incubation~~ offer through two main activities ~~(AP):~~ (i) the recalibration of three CRDEs with the aim of promoting one reference centre per island in the trades of a climate-resilient agricultural value chain, and ensuring that rural youth groups have secure access to land; (ii) ~~targeted support for the modernization of training, apprenticeship and incubation technical platforms in the same climate change adaptation approach.~~

(i) Recalibration of three CRDEs regarding adaptation to climate change

47. The project will support the strengthening of the infrastructure and technical capacities of the Rural Economic Development Centres (CRDE), to improve access to agricultural advisory services and develop rural entrepreneurship in the Comoros for the benefit of young people and girls. To this end, the project will undertake a preliminary socio-economic study to identify attractive occupations for young people in the field of rural development.

67.

48-68. In this respect, the results of the "Agro-Hub" project carried out by the ILO in 8 countries showed that most self-employed young people in the agriculture sector (around 70-80%) prefer segments like input supply, aggregation, processing,

marketing and services over production. In comparison to the production segment, these other segments appear to carry less risk. The preliminary socio-economic study should identify the segments of the agricultural value chain that could attract the youngest people, and the awareness-raising actions to make young people aware of the importance of agricultural production. The recalibration of the CRDEs is in line with the government's priorities for agricultural development and food security set out in the Union of the Comoros' Compact 2023-2028 for agriculture and food. The CRDEs are targeted as institutions providing training, advisory support and local supervision for producers and professional organizations, which are to host the bulk of the Compact's activities. Several technical and financial partners (TFP), such as the World Bank, the French Embassy and the FAO, have already supported the renovation and operationalization of seven Rural Economic Development Centres (CRDE) out of a total of nineteen CRDEs. ECO-Youth will help to ensure that the training and professional integration functions in the agro-sylvo-pastoral production sub-sectors of three reference centres are permanently anchored.

49-69. In the fisheries sector, the reference CRDEs, supported by ECO-Youth, will contribute to the sustainable exploitation and development of fisheries resources by improving conservation, processing and marketing systems, and promoting entrepreneurship in these areas.

50-70. The process of recalibrating the CRDEs identified at this stage will include:

- a. Identification of partner CRDEs;CRDEs.
- b. CRDE training curricula and trainers integrating climate change adaptation, including agroforestry, (agroecology, permaculture, thrifty irrigation, climate-resilient crops, waste management/processing, composting, meteorological data processing and analysis, sustainable fishing, etc.)etc.; and
- c. Integrating the Gender Action Learning System for Gender equality and climate change adaptation (GALS+). This method, adopted and applied by IFAD, aims to give women and men greater control over their lives, and promotes equal rights and opportunities by empowering the most vulnerable women and men to develop, negotiate, implement, and monitor their own plans to improve productivity and production quality, adaptive capacities, climate resilience, nutrition and increase their incomes. The approach aims to reduce the risks to their livelihoods by creating greater equality between men and women within households and increasing women's participation in economic decision-making.

54-71. A 2-hectare area will be established in each CRDE to serve as a learning, demonstration and application field for plant and animal production. This will be a place for collective, hands-on learning, enabling training beneficiaries to improve their critical analysis and decision-making skills. The proposed activities will be carried out directly in the field, notably in the form of problem-solving experiments, and will correspond to a particular local situation. This could include methods such as agroforestry, water conservation, soil management, improved seeds and integrated pest management practices, to improve the agricultural productivity and climate change resilience of production systems, crop diversification, and grazing land management.

- (ii) Technical platforms for training, apprenticeship and incubation areClimateareClimateare resilient assets secured strengthened

72. As a first step, ECO-Youth will ensure that rural youth groups have secure access to land. This activity is an essential prerequisite for setting up investments to develop these lands for sustainable agricultural activities. It will reassure young people and serve as an incentive to guide them toward agricultural production activities. The local and national authorities concerned will be involved to guarantee the legal status of the plots to be developed in relation to the groups of young people targeted by the project. ECO-Youth will collaborate with some of the selected entities and bolster their equipment, training and apprenticeship facilities. During the design phase, these entities will be identified, consisting of micro and medium-sized enterprises capable of providing apprenticeship opportunities for young men and women. This selection process ensures that the collaborating entities possess the capacity to offer valuable skill-building experiences for youth in various sectors. Prior to the commencement of any collaborative efforts, Partnership agreements will be signed with each entity. The young learners will also be enrolled into tutored learning schemes. To support this initiative, the project will strengthen partnership with master craftsmen, trainers or model farms capable of accommodating and providing practical training opportunities for young participants. This collaboration will ensure that young learners receive hands-on experience and mentorship from experienced professionals in their respective fields. In preparation for these tutored learning schemes, the project will enhance the capacities of trainers and apprentice masters, with a particular focus on climate change adaptation measures within their professional activities. This capacity building will ensure that young learners receive well-rounded training, incorporating sustainable practices and knowledge of climate change adaptation strategies. It is important to emphasize here that ECO-Youth will support the creation of youth groups, in various forms adapted to the local context -

POs, cooperatives, associations, etc. - in order to work only with organized groups of young people, as described in the paragraphs below (cf. Output A 2.2 *Setting up young rural producer organizations*).

73. In the land management scheme for youth group activities, appropriate and climate-resilient water infrastructure will be built in line with the land use, as part of an integrated approach involving the beneficiaries and other stakeholders. Depending on the specific needs and configuration of the plots concerned, investments may include the construction of tanks, water supply systems and renewable energy sources (such as solar panels for water pumping).

74. At the same time, ECO-Youth will identify and implement "agro-ecological infrastructures," which include all so-called non-productive landscape elements, such as hedges, isolated trees, shrubs, and woodland strips. These are important measures for adapting to climate change, as they contribute to water and soil conservation and promote biodiversity.

75. On each island, ECO-Youth will invest in supporting the blue economy through the implementation of fish aggregating devices (FADs): awareness-raising and organization around FADs, technical training for the construction of FADs, training in FAD maintenance and management mechanisms. The project will support the prospection and delimitation of fishing zones within a legal and sustainable framework, as well as the strengthening of the biological rest monitoring system. These measures will have a positive impact on the management of the environment and natural resources.

76. In view of facilitating access to market, the project will invest in the renovation or construction of access-road tracks, according to the needs and to the resources available.

Sub-component Outcome A.2. Development of entrepreneurial and employment initiatives

52-77. This sub-component Outcome will create favourable conditions for rural youth entrepreneurship and invest in training and professional integration. Two main activities will be carried out: structuring investments and training rural youth. To this end, the project will carry out social engineering, applied in a context of awareness-raising and support for the creation of rural cooperatives for young people. It will consist of using strategies and tools to mobilize communities, encourage adherence to collective projects, and overcome socio-cultural obstacles. The content of this social engineering will be defined during the design phase and will aim to educate, raise awareness, motivate, and provide concrete support as detailed below.

Output A.2.1: Capacity-building for young people in sustainable agriculture and fisheries achieved. Climate-resilient infrastructures empowering young agro-pastoral and fisheries entrepreneurs.

Output A.2.2: Young rural producer organisations set-up. Young people trained in sustainable rural trades for income generation.

53. Capacity-building for young people in sustainable agriculture and fisheries achieved. Creation of climate-resilient infrastructures in the agro-sylvo-pastoral and fisheries sectors

(i)

54. Young people's entrepreneurial and employment initiatives in the agro-sylvo-pastoral and fisheries sectors will be supported by structuring investments that provide them with adequate and efficient services and infrastructures. In particular, the project will facilitate access to production factors and resources, as well as to markets and services. In particular, the project will support agro-sylvo-pastoral and fisheries investments, as well as the creation of climate-resilient infrastructures to support the development of these investments. Actions will be developed in synergy and complementarity with the implementation of the FORCE Jeunes project and ongoing initiatives developed by the government with the support of various partners (World Bank, French Cooperation, African Development Bank (ADB), Food and Agriculture Organisation (FAO), IFAD, etc.):

55. On each island, ECO-Youth will invest in infrastructure and equipment:

— **Support for the blue economy through the implementation of fish aggregating devices (FADs):** awareness-raising and organization around FADs, technical training for the construction of FADs, training in FAD maintenance and management mechanisms. The project will support the prospection and delimitation of fishing zones within a

legal and sustainable framework, as well as the strengthening of the biological pest monitoring system. These measures will have a positive impact on the management of the environment and natural resources;

— **To facilitate production and market access** by developing market garden areas, building post-harvest infrastructure (storage warehouses, ecological cold rooms (CFE) attached to market garden areas), helping to rehabilitate tracks to transport produce away from production areas, supplying inputs to young entrepreneurs and small-scale producers in general by opening input stores, etc.

— **Infrastructures will be resilient to climate change** and the use of renewable energies will be prioritized to reduce GHG emissions. This will be done in an environmentally friendly way, without destroying biodiversity, and will be taken into account in the definition of technical specifications for procurement.

56. The structuring actions will be implemented in collaboration with institutions, the professional sector (private and cooperative) and civil society, according to their technical and institutional roles and mandates, while involving producers' associations/cooperatives, as well as young people and women living in the targeted villages.

(i) **Training young people in sustainable rural trades**

78. The project estimates that about 4950 young people, aged between 18 and 35, will be trained in the various schemes and courses. Implementation will consist of a series of interventions including facilitation and awareness-raising, identification, profiling and orientation of young people, and technical and vocational training for rural trades. **The project will draw upon the creation/strengthening of youth groups that will be collectively supported to develop their productive activities. In this perspective, the project will promote the creation of rural youth enterprises, such as cooperatives, and will deploy all means to raise awareness, assist in establishment and structuring, and subsequently support the production and marketing process. Three phases have been identified at this stage, and will be further developed during the design phase:**

- a) **Raising awareness among young people:** To enable young people on the three islands to find out about the project's activities and the opportunities available to them. Awareness-raising activities will be carried out on a large scale, reaching around 7,000 young people over the life of the project. Campaigns will also be organized to promote the advantages a collective organization for rural enterprise creation (as rural cooperatives or other forms of association), particularly in terms of access to financing, training and markets.
- b) **Identification, profiling and orientation of young people.** It will be preceded by a local needs assessment: identification of the region's agricultural needs, crops suited to the local climate and market opportunities, combined with stakeholder mapping. These assessments will be carried out during the design. In this phase, the aim will be to meet the various needs of young people in terms of access to training, employment and entrepreneurial opportunities.
- c) **Technical and vocational training for young people.** The precise content of the training will be defined during the design mission and will include capacity building in meteorological data processing and analysis. It could focus on sustainable agricultural practices (agroecology, permaculture, thrifty irrigation, climate-resilient crops); capacity-building in new fisheries technologies, new agricultural techniques, cooperative or group management, or the use of digital technologies.

79. The project foresees to create/support an average of 3 groups of young people and/or cooperatives of young people per village, with 25 young people per group. In all, for the 66 villages targeted, 4950 young people will be sensitised and directed towards vocational training and will be able to associate within groups or cooperatives in the various agro-sylvo-pastoral and fisheries sectors, the craft industry or the green and blue economy.

(ii) **Young rural producer organisations set-up**

80. Eco-Youth will promote, among other collective professional and entrepreneurial forms of organisations, the creation of agricultural cooperatives to increase the bargaining power of farmers and enhance access to financial resources, seeds, equipment, and training. The project will provide support for the legal creation of youth professional groups, for their structuring and training in management and organization techniques.

81. To this end, the project will contract partners to be identified, such as associations, to support the setting up and smooth operation of rural enterprises created by young people. In the same way, the project will promote the creation

Formatted: Indent: First line: 0"

Formatted: Font: Bold

Formatted: Numbered + Level: 2 + Numbering Style: i, ii, iii, ... + Start at: 1 + Alignment: Left + Aligned at: 1" + Indent at: 1.25"

of fisheries and aquaculture cooperatives. will offer ongoing training in cooperative management, financial management, marketing and value chains for fisheries products.

Implementation will consist of a series of interventions including facilitation and awareness-raising, identification, profiling and orientation of young people, and technical and vocational training for rural trades:

Facilitation and awareness-raising. To enable young people on the three islands to find out about the project's activities and the opportunities available to them, awareness-raising activities will be carried out on a large scale, reaching around 7,000 young people over the life of the project.

Identification, profiling and orientation of young people. Drawing upon a specialized system consisting of defined criteria, profile evaluations, and a validation committee, this intervention will be driven by awareness-raising efforts and seek to refine the orientations in line with the three pathways. In doing so, it aims to address the diverse needs of young people in accessing training, employment, and entrepreneurial opportunities.

Technical and vocational training for young people. Depending on their profile, young people will be placed in one of three training and integration paths. The training, the precise content of which will be defined during the design mission, will include capacity building in meteorological data processing and analysis.

To achieve its employment objectives, the project will build partnerships with the Maison de l'Emploi (MDE) and the Chamber of Commerce, Industry and Agriculture.

It is estimated that the 6,000 young people sensitized will be profiled and oriented, and that 4,500 of them will enter training courses (pre-vocational, junior and senior). Of these, 3,250 young people will be able to present project ideas in the various agro-sylvo-pastoral and halieutic, craft, digital and green economy sectors. A further 1,200 young people will be considered for salaried employment. A total of 3,250 business plans will be prepared, including 2,250 for juniors and 1,000 for seniors.

Component B. Green business partnerships and sustainable employment opportunities

82. **Green business partnerships and jobs.** Throughout the value chain, in order to ensure a climate-resilient process at every stage, from production to market access, ECO-Youth will encourage the use of new climate-resilient technologies in the production and processing of agricultural and fishery products, and create a more conducive business environment through the use of ICT, in line with the Comoros' ambition to become an emerging country by 2030. The ECO-YOUTH project thus covers all stages of the climate-smart agriculture value chain to ensure sustainable economic opportunities for young people. These stages include:

- **Input supply:** promoting climate-resilient seeds, organic fertilizers, and sustainable irrigation methods.
- **Production:** implementing climate-smart farming and fishing techniques, mechanized tillage, and agroforestry practices.
- **Processing & Value Addition:** enhancing post-harvest handling, food processing, and preservation techniques.
- **Distribution & Market Access:** Facilitating linkages with local markets, strengthening cooperative networks, and improving logistics.
- **Consumption & Utilization:** raising awareness of sustainable food systems, nutrition, and eco-friendly consumption patterns.

57. **Waste Management & Circular Economy:** encouraging the use of agricultural waste for bioenergy, composting, and sustainable recycling solutions. Following on from the actions planned under Component A, ECO-Youth will continue to support young entrepreneurs by helping host companies to draw up business plans and ensure that they are bankable, as well as by providing follow-up support for financed business plans. The project's support for the companies concerned will focus on bringing them up to environmental standards and taking climate risk into account.

Outcome B .1 Enhanced Climate Adaptation in Agriculture and Fisheries Partnership with the private sector

Formatted: Font: Not Bold

Formatted: Space After: 0 pt

Formatted: Font: Bold

Formatted: Space After: 0 pt, Bulleted + Level: 1 + Aligned at: 0.25" + Indent at: 0.5"

Formatted: Font: Bold

Formatted: Indent: Left: 0.25", Hanging: 0.25", Space After: 12 pt, Bulleted + Level: 1 + Aligned at: 0.25" + Indent at: 0.5"

Output B.1.1 Green and climate resilient technologies and Climate smart agricultural practices promoted

Output B.1.2 Processing of agricultural and fisheries products enhanced

(i) Green and climate resilient technologies and Climate smart agricultural practices promoted

Formatted: Font: Bold
Formatted: Numbered + Level: 1 + Numbering Style: i, ii, iii, ... + Start at: 1 + Alignment: Left + Aligned at: 1" + Indent at: 1.25"

83. The project will ensure that young farmers have access to necessary agricultural inputs (seeds, fertilizers, irrigation tools) and climate-adaptive technologies (drought-resistant crops, water-efficient systems). It will promote agroecology and agroforestry, crop diversification as well as the adoption of smart agricultural technologies. This will not prevent the promotion of resilient traditional practices and can be combined with use of new technologies.

84. ECO-Youth will particularly promote the implementation of agricultural greenhouses as they play a key role in adapting to climate change, particularly in vulnerable regions such as the Comoros. They increase productivity, protect crops from climatic hazards and promote more sustainable use of water resources. By combining technological innovation, good farming practices and financial support, greenhouses can play a key role in improving food security and the resilience of rural communities to the effects of climate change. Thanks to their innovative nature, they are also likely to attract more young people to agricultural production activities.

(ii) Processing of agricultural and fisheries products enhanced

Formatted: Outline numbered + Level: 3 + Numbering Style: i, ii, iii, ... + Start at: 2 + Alignment: Left + Aligned at: 1.04" + Indent at: 1.29"

85. To increase added value and improve incomes for young farmers ECO-Youth will support improved access to appropriate processing, storage technologies, and profitable markets.

86. Processing agricultural and fisheries products will make it possible to absorb production peaks and increase product lifespan and consumption. In the agricultural sector, the project will promote the post-harvest management by improving infrastructure for storage, processing, and transportation to reduce post-harvest losses, especially during extreme weather events. In the fisheries sector, ECO-Youth will provide equipment and targeted training for young people in seafood processing (drying, smoking, freezing) to add value to products and create new jobs in the value chain. This activity will be particularly favourable to the employment of women, as they are traditionally involved in processing and drying fish.

Formatted: Body Text

Outcome B.2 Supporting access to the Output B.1.1: Integration of young people into employment and business partnerships facilitated.

market

Formatted: English (United States)

87. ECO-Youth will achieve this objective through, on the one hand, the establishment of exchange platforms, the development of innovative networks of small agri-food businesses, the promotion of digitalization in the agricultural sector for the benefit of young farmers, particularly to develop e-commerce, as well as the creation of Public-Private Partnerships. These actions align with the Government's objectives of integrating the Union of the Comoros into the group of emerging countries by 2030 and contribute to the implementation of the "Comoros Digital Strategy 2028."²¹

88. 2 outputs contribute to the achievement of this outcome:

Output B.2.1 Product marketing facilitated

Formatted: Indent: Left: 0.5"

Output B.2.2 Performance tracking and feed back. Output B.1.2 Support for the environmental compliance of private partner companies

Formatted: Indent: Left: 0.8"

~~(i) (i) Integrating young people into employment. The integration of young people into employment will involve support for the development of business plans, which could be submitted for funding under the shared-cost mechanism provided for in subcomponent B.2.~~

Formatted: Indent: Left: 0.5"

89. ~~Product marketing facilitated~~ **Setting up platforms.** ECO-Youth will encourage the development of innovative networks of small and medium-sized agri-food businesses, enabling the emergence of collective actions for the development

²¹ Agence Nationale Du Développement du Numérique (ANADEN). Stratégie Comores Numériques 2028.

of local value chains. Building networks among young entrepreneurs can provide mutual support, idea exchange, and collaboration opportunities. These networks can be formal, like entrepreneurial hubs, or informal, like social media groups. Peer networks can also facilitate mentoring relationships and collective advocacy for youth entrepreneurship. The establishment of these platforms will also facilitate the creation of short supply chains and improve the competitiveness of local products. Eco-Youth will cooperate with the FAO in this area.

90. Promoting the digitalization of the production and marketing activities. The Agence Nationale de Développement du Numérique (ANADEN) emphasized the critical importance of digitalizing the agricultural sector to enhance food security and attract young people to agricultural employment. However, ANADEN highlighted that key economic sectors such as fishing and agriculture are struggling to implement digital transformation, despite the significant potential of information and communication technologies (ICTs) to drive their development and global market integration.

Formatted: Font: Bold

91. ECO-YOUTH will work with the relevant digital players, particularly ANADEN, to encourage ECO-YOUTH beneficiaries to get involved in the digital economy. Young people often excel in using technology and can effectively leverage digital tools to address challenges faced by rural entrepreneurs. From e-commerce platforms to social media marketing, technology empowers rural youth to access broader markets and optimize their operations. Enhancing digital literacy and improving access to technology can further boost their entrepreneurial potential. For instance, digital platforms and mobile technologies allow rural cooperatives to access vital information on markets, weather, prices, and agricultural trends. ECO-Youth will provide training to young people in utilizing digital tools to market their products online, with a focus on e-commerce platforms and social media networks. All these specific activities will be clearly defined at the formulation phase, based on consultations with stakeholders and relevant technical institutions such ANADEN.

Formatted: Body Text, Indent: Left: 0"

Formatted: English (United States)

~~(ii) The project will collaborate with skilled and competent partners to develop quality business plan for each selected young person who meets the eligibility criteria for both the business plan and credit institutions. Selected service providers, which may include training institutions, will receive a mutually agreed number of business plans to prepare. In addition to this task, they will also support the project by assisting the young people to gather the necessary documents for the business plan and financing application. Once the business plans have been developed, they will undergo a quality control process through the project filter, including selection criteria, before being submitted to the validation committee. The list of criteria will incorporate the environmental and social policy standards set by the Adaptation Fund. To ensure thorough quality control, the project may engage occasional international technical assistance as needed. ECO-Youth will establish a strategic partnership with the Mde to operationalize a rural youth placement desk, organized around four main functions:~~

~~(iii) Referencing all job offers in the productive sub-sectors promoted by the project and disseminating them on social networks;~~

~~(iv) The creation of a database of young people trained on the various courses and their access to the private sector;~~

~~(v) Placement of trained young people with agri-SMEs within the framework of strategic partnerships with employers, the Chamber of Commerce and Industry, and the National Investment Promotion Agency. The placement activity will also offer opportunities for pre-professional internships or pre-integration into salaried employment.~~

~~(vi) Ongoing monitoring and dissemination of job offers in the fishing, farming and livestock sectors.~~

~~(vii) Promoting green jobs. Regarding green jobs, the project will explore opportunities of economic and professional interest to young people in the agricultural production, entrepreneurship sub-sectors, and on skills development. To this end, the potential of social media platforms will be harnessed through the strategic utilization of LinkedIn, Facebook, and Instagram pages and groups. Similarly, communication by ECO-Youth actors/operators will involve the intensive use of profiles, videos, articles, and documents on these networks as well as on the Internet platform. All initiatives should clearly target green jobs (sustainable agriculture, climate-smart agriculture, etc.).~~

~~(viii) The project will develop a catalogue of green and blue job opportunities, based on a study carried out at the start of the project; and (ii) introduce a bonus aimed at rewarding initiatives that stand out for the creativity of their promoters and the originality of their projects.~~

~~(ix) Bringing private companies up to environmental standards~~

Formatted: English (United States)

~~(x) Society's expectations of sustainable development, transparency and responsibility have evolved in the face of increasing pressure on the environment from pollution, inefficient use of resources, inappropriate waste management, climate change, ecosystem degradation and loss of biodiversity. Production processes can no longer ignore their impact on the environment and the need to take climate risks into account. ECO-Youth will be working with the companies that will be hosting the young people, with the Chamber of Agriculture and with the relevant ministerial departments, to integrate climate change resilience into corporate strategies, i.e. integrate climate resilience measures into operational plans and draw up business continuity plans that take extreme climate scenarios into account.~~

~~(xi) In particular, this support will enable companies to adopt weather- and disaster-resistant technologies and infrastructures and, more generally, to adopt recognized environmental standards and obtain, for some of them, environmental management certifications such as ISO 14001. We also need to ensure that supply chains comply with these standards. According to international experience, adopting good environmental practices can help reduce the use of raw materials, cut water and energy consumption by companies, and improve recycling or waste recovery.~~

~~(xii) At the design stage, collaboration with the Chamber of Commerce should enable us to identify the companies operating in the value chains covered by the project, from primary production to processing and marketing. Activities to support the "greening" of Comorian companies will be modulated according to the nature of the activities and the size of the company concerned.~~

~~(xiii)~~

~~(xiv) Sub-component B.2. Green financing for young agripreneurs~~

~~(xv) Output B.2.1: — A shared-cost mechanism for green financing of young agripreneurs' business plans is set up~~

~~(xvi) Output B.2.2: — Integrating climate risk into financing mechanisms for young agripreneurs~~

~~(xvii) Financing green business plans. The project will set up a shared-cost mechanism for financing green business plans for the benefit of young promoters wishing to establish themselves as first-time entrepreneurs and young people with some seniority and experience in the activity they wish to develop. The shared-cost mechanism will be designed with a distribution key differentiated according to the path taken. The financing scheme will be based on two instruments: the project's contribution in the form of a grant and a contribution from the beneficiaries.~~

~~(xviii) A total of 3,250 young people should be financed, with a proportional breakdown by island, and with a high incidence of young people from the junior program (around 70%). A total of 1,000 (or 30%) young seniors will be proposed for financing, with the aim of developing an existing business, either to diversify it or to increase its size in order to achieve a larger market share. The more numerous junior target group to be financed is essentially made up of first-time entrepreneurs who are starting out on a professional career thanks to the ECO-Youth project.~~

~~(xix) The project's contribution is determined as part of the review and approval of its business plan by the Approval Committee, whose composition and operating procedures will be determined during the design phase. This business plan is the result of a training program for young people, in particular juniors, or a retraining or facilitation process for business advisors in the case of seniors. With regard to the distribution key, juniors contribute 10% of the cost of their business plans in kind or in cash, while seniors contribute around 40%.~~

~~(xx) In terms of economic targeting, eligible entrepreneurial initiatives fall into several categories of agro-sylvo-pastoral and fisheries activities, as well as related sub-sectors. The typology includes: (i) agriculture, agroforestry and non-timber forest products; (ii) livestock farming; (iii) fishing; (iv) processing; (v) service crafts and ecotourism; (vi) digital; (vii) business partnerships and (viii) other rural trades. Environmental sustainability and climate change adaptation criteria will be applied to all projects. These criteria will be~~

defined during the design mission and integrated into the business plan approval criteria grid of the Approval Committee.

(xxi) Taking climate risk into account. ECO-Youth will carry out a preliminary study on how climate risk can be taken into account in the green financing mechanism presented above, for example in the form of insurance. This green financing mechanism, also covering climate risk, will be integrated into the Action Plan for financing measures to adapt to climate change, to be drawn up as part of the National Adaptation Plan (NAP) update²². Similarly, ECO-Youth will support the Government in building the capacity of the private sector in terms of adaptation options.

(xxii) At this stage the process of supporting youth employment has been defined, as well as the target groups (Young people aged 15–17 (pre-professional), without vocational training; Young people 18–35 (juniors)²³; with diplomas, unemployed; Young people 18–35 (seniors) fully engaged in economic activities in search of development), and also the areas of activity in line with climate change adaptation priorities. The specific content of activities, in relation to considerations of sustainable natural resource management and climate change adaptation, will be fully defined at the design phase.

Performance tracking and feed back

92. Adjusting farming practices and management processes based on data collected and feedback is essential to improving the profitability of young people's rural businesses and strengthening the climate resilience of agriculture. ECO-Youth will set up a monitoring and feedback system articulated around the following main activities:

- Set up a mechanism for regular monitoring of adjusted practices to assess their effectiveness (participatory evaluation system).
- Analyze the data collected to identify strengths, weaknesses and opportunities in current practices.
- Adjust farming practices according to yield data and climatic conditions Adjust farm management processes based on profitability indicators and feedback.
- Encourage the adoption of new technologies based on data results
- Use lessons learned from adjustments to inform long-term planning
- Enrich exchanges on networks and platforms, enabling regular knowledge sharing and mutual support to improve farm business resilience and profitability.

Component C. Strengthening of the policy and institutional framework for the greening of youth employment in rural ~~Strengthening the policy and institutional framework for rural youth employment~~

areas

SubcomponentOutcome C.1. Support for policy instruments and the institutional framework

- Output C.1.1:** Relevant sectoral policies and strategies are supported
Output C.1.2: Key institutions supporting rural youth businesses are strengthened

58-93. In line with the PCE 2030 and sectoral policies (National Agricultural Investment Plan, National Gender Equity and Equality Policy, National Youth Policy, etc.) this sub-componentOutcome will implement two main activities: (i) support for policies and strategies; and (ii) institutional strengthening.

59-94. **Support for sectoral policies and strategies.** ECO-Youth will support the review and updating of strategic frameworks and policies focusing mainly on youth, employment and gender, climate change adaptation, etc. The national youth policy (2017) highlights the major problems faced by Comorian youth. The policy document shows that support is

²²MAPETA. April 26, 2024. Workshop to launch the NAP update process.

²³Please refer to paragraph 57 for a detailed definition of the target groups

Formatted: Indent: Left: 0", Numbered + Level: 1 + Numbering Style: 1, 2, 3, ... + Start at: 1 + Alignment: Left + Aligned at: 0.2" + Indent at: 0.2"

Formatted: Font: Bold

needed in the legal, regulatory, institutional and operational spheres. The policy document is conceived as "...a framework document on which all public and private players, as well as technical and financial partners working in the youth and development sector, must base their actions", which makes all ECO-Youth support relevant.

[60-95](#). Socio-cultural dynamics cause disparities between women and men. Aware of all these inequalities, the Government has recorded them in the National Gender Equity and Equality Policy (PNEEG 2017). It recognizes that "gender inequalities are a serious brake on the development and evolution of Comoros, to the detriment of both men and women. They compromise the chances of reducing poverty and are at the root of the country's slow economic growth and the low quality of life currently experienced."

[61-96](#). In terms of employment in general, and in rural areas in particular, the Plan Comores Emergent [2020-2030](#) (PCE) is based on a diagnosis of the failure of previous policies, with economic growth that is weak, volatile and insufficient to improve living standards and create sufficient decent jobs. Improvements are still needed in the implementation of the required actions.

[62-97](#). ECO-Youth will support the development, review and implementation of policies relating to (i) employment promotion instruments; (ii) agricultural and rural development, with particular emphasis on the integration of young people and women, and adaptation to climate change; (iii) integrating rural entrepreneurship into training programs; (vi) improving the participation of women and young people in political dialogue; (vii) gender for the empowerment and social inclusion of young people and women living in rural areas; (viii) policy-making for enabling green job environment. Within this framework, the project will support the development and implementation of a gender strategy for sustainable rural development, the updating of the National Environment Strategy, the National Environment Policy, the Nationally Determined Contribution (NDC), the National Program for Adaptation to Climate Change (NAPA), the National Youth Policy and the development of a National Strategy for Gender Mainstreaming in Rural Development.

[63-98](#). **Strategic partnerships and institutional strengthening**. Assessments carried out as part of the NAP update process²⁴ highlight insufficient institutional capacity to implement climate change adaptation measures at all levels of government, as well as weak technical planning capacity. ECO-Youth will support the institutional strengthening of MET's General Directorate for the Environment and Forests, as well as the Directorate of Fisheries Resources and Agricultural and Livestock Strategies of the Ministry of Agriculture, Fisheries and Handicrafts, the Ministries in charge of Youth and Employment, Vocational Training and Integration, Gender Promotion, Economic Integration and other stakeholders. Institutional support will selectively target key institutions in the provision of business services to rural women and young people, in particular [the National Research Institute for Agriculture, Fisheries and the Environment](#) (INRAPE), the Maison de l'Emploi as part of its Strategic Development Plan revised in 2022, the Union of Chambers of Commerce and Chambers of Agriculture, [the employment consultation frameworks on each island and at Union level](#), [networks of young agripreneurs](#); [networks of POs/Cooperatives](#). This targeted support will facilitate the active participation of governing structures and beneficiaries in project implementation. A specific capacity-building program on integrating climate change adaptation into programs, plans and strategies will be developed and implemented for this purpose.

Formatted: Font: Bold

Subcomponent Outcome C.2: Monitoring, evaluation and knowledge management

Output C 2.1: An M&E strategy is put in place

Output C 2.2: Knowledge products are created and disseminated

[64-99](#). **Monitoring and evaluation**. The project will set up a monitoring-evaluation system (MES) based on the results-based management approach. The system's role will be to support shared understanding of the project, to improve management and efficiency, and to meet accountability, capitalization and learning requirements. It will make it possible to (i) measure the progress of project implementation, the achievement of expected outputs and outcomes, and the impact of interventions on target groups, and (ii) inform a list of basic gender indicators and age- and sex-disaggregated data.

Formatted: Font: Bold

²⁴ MAPETA. April 2024: Workshop to launch the NAP development process.

65-100. Output data will be collected on an ongoing basis for beneficiaries and all project activities. Outcome and impact data will be collected on a sample of beneficiaries through baseline, mid-term and final surveys that will be aligned with IFAD's guidelines for the measurement of core outcome and impact indicators (IFAD Outcome and Impact Guidelines).

66. **Knowledge management and communication.** From the outset of the project, the National Coordination Unit will draw up a Knowledge Management and Communication Strategy with an operational implementation plan to capitalize on its experiences and innovations and enable knowledge sharing and scaling up, first internally within the project, then externally. Annual knowledge management and communication plans will be drawn up, budgeted and implemented at national and island level. As part of this strategy, monitoring and evaluation of the activities, products, effects and impacts of the project's interventions will form the basis of the learning and knowledge management process. The project will then seek to create a value chain between the implementation of activities, monitoring and evaluation, knowledge management, political commitment, institutional support and communication.

Formatted: Font: Bold, English (United Kingdom)

101.

67.

Formatted: No bullets or numbering

B. Describe how the project/programme provides economic, social and environmental benefits, with particular reference to the most vulnerable communities, and vulnerable groups within communities, including gender considerations. Describe how the project/programme will avoid or mitigate negative impacts, in compliance with the Environmental and Social Policy and Gender Policy of the Adaptation Fund.

102. **Results areas.** The project is aligned with the following results areas of the Adaptation Fund: Component A (Training and development of entrepreneurial and employment initiatives) will contribute to Outcome 4 (Increased adaptive capacity within relevant development sector services and infrastructure assets), Component B (Green business partnerships and sustainable employment opportunities) to Outcome 6 (Diversified and strengthened livelihoods and sources of income for vulnerable people in targeted areas) while Component C (Strengthening of the policy and institutional framework for the greening of youth employment in rural areas) will contribute to Outcome 7 (Improved policies and regulations that promote and enforce resilience measures).

Formatted: Font: Not Bold

68-103. **Economic benefits.** The project will facilitate access to production factors and resources, as well as to markets and services, notably by supporting agro-sylvo-pastoral and fisheries investments, as well as the creation of climate-resilient infrastructures to support the development of these investments. To this end the project foresees to invest about 1/5 of the total amount of the proposed (2,000,000 USD) in Climate-resilient infrastructures to empower young agro-pastoral and fisheries entrepreneurs. Investments in climate-resilient infrastructure in the agro-sylvo-pastoral and fisheries sectors will yield numerous economic benefits. These advantages include the creation of income-generating activities for 6000-4950 young people and the establishment of a financing mechanism for business plans that incorporate adaptation to climate change. These investments will lead to: (i) an increase in income for direct project beneficiaries through business development and salaried employment; (ii) an improvement in food and nutritional security for rural populations, thanks to an increase in the quantity and quality of food, vegetable, animal and fish production, and to nutritional education; (iii) an increase in added value, employment and economic opportunities along the targeted value chains, thanks to an increase in the share of marketed and processed production, as well as in the financing available to develop private initiatives and win-win partnerships; (iv) an increase in tax revenues and an improvement in the balance of trade as a result of reduced imports; (v) economic empowerment of rural women and young people. The establishment of a financing mechanism for young agripreneurs' business plans, integrating adaptation to climate change, will enable the production of stable income for young people, and women.

69-104. **Social benefits.** The project will generate social benefits by directly addressing youth unemployment through the creation of jobs and income-generating activities. The inclusion approach will be promoted through the innovative Gender Action Learning System for Gender equality and climate change adaptation (GALS+), which promotes empowerment, adaptive capacities, climate resilience, nutrition and gender equity in associations, cooperatives, and communities. The project will directly target 6,000,000-4,950,000 young people from around 4,000 rural households with low incomes or vulnerable to poverty. Within these households, it will indirectly impact more than 20,700,000 people. In line with the project's gender focus, women will account for 50% of the young people directly benefiting. Taking gender into account in the criteria for setting up rural enterprises will help to improve the social status of this vulnerable category of Comorian society. Taking gender into account in business plan validation criteria will raise the social status of this vulnerable category.

of Comorian society. In addition, and in line with national standards favouring the integration of people with disabilities (PWD) into economic activities, this category will represent 1.5% of young people.

70-105. Environmental benefits. As part of the Adaptation Fund, the project aims to strengthen sustainable resource management through the creation of jobs, businesses and income-generating activities in the agro-sylvo-pastoral sectors. Capacity-building for key institutions supporting young people in the creation of business plans will focus in particular on integrating climate change adaptation and sustainable natural resource management issues into training and apprenticeship curricula. Environmental sustainability criteria will also be introduced into the analysis grid for [business-plan eligibility/ruraleligibility/ruraleligibility enterprises eligibility](#). Investments in climate-resilient infrastructure (around 2,000,000 USD) will also contribute to the sustainable management of natural resources. In addition, the project will be developed in accordance with the Adaptation Fund's 15 Environmental and Social Policy (ESP) principles, which serve as environmental and social safeguards. To ensure full compliance with the Adaptation Fund's requirements, the project has undergone screening against these principles, and mitigation measures have been identified where necessary, addressing any potential risks or challenges related to environmental and social safeguards. The project meets the overall objective of the NAPA, which is to help reduce the adverse effects of climate change on people's livelihoods and on the most vulnerable areas, thereby increasing their resilience to climate change and variability.

106. Core impact indicators. As per Adaptation Fund guidance, AF core impact indicators will be fully identified and complied with during the development of the fully developed proposal. The intention is however for the fully developed proposal to align and comply with the following core impact indicators: i) 'Number of Beneficiaries'; and iii) 'Increased income, or avoided decrease in income'.

C. Describe or provide an analysis of the cost-effectiveness of the proposed project/programme.

107. During the project design phase, a complete cost analysis of all components and activities will be carried out, as well as an analysis of alternatives to ensure profitability. This analysis will assess the financial implications of each component, taking into account considering factors such as direct costs (training and skills development costs, investment in infrastructure (equipment, buildings), salaries and wages, operational costs (raw materials, services, maintenance) and indirect costs (administrative costs, monitoring and evaluation costs, opportunity costs (potential benefits lost by choosing this option over another).

108. The proposed Cost-Benefit Analysis (CBA) for the ECO-YOUTH project follows a structured and quantitative method to assess the economic and adaptive benefits of climate-smart investments in agriculture, fisheries, and greenhouse production. This approach is essential for evaluating the financial viability, sustainability, and effectiveness of the project compared to a "without project" baseline scenario.

- The analysis will simulate real-world financial performance based on agriculture, fisheries, and greenhouse production models and producer organizations in the three islands.
- The analysis will provide a realistic income estimation that accounts for local market conditions, productivity rates, and climate risks.
- It will ensure that project beneficiaries' financial gains are accurately captured, making the project's economic impact quantifiable.
- The project will assess climate resilience benefits, such as improved soil health, increased water retention, reduced fish stock depletion, and greenhouse gas mitigation. Unlike conventional financial models, this integrates long-term environmental sustainability into economic assessments.

71. At the stage of the concept note, a draft estimation of the cost-effectiveness is presented below.

Table 8: Cost-effectiveness table

109. Component A of the ECO-YOUTH project has been strategically designed to maximize both cost-effectiveness and long-term sustainability by building on existing institutional and community-based structures. Rather than establishing new systems, the project leverages the already operational Centres Ruraux de Développement Économique (CRDEs)

rehabilitated through support from partners such as the World Bank, French Embassy, and FAO—as hubs for training, outreach, and capacity building. This choice significantly reduces setup and operational costs while accelerating the scaling of support to youth and women’s groups in rural areas. These CRDEs are integrated into national and local planning frameworks, reinforcing sustainability through public sector alignment and local ownership. At the core of Component A is the promotion and strengthening of agricultural cooperatives, a proven and inclusive model that empowers small producers - especially youth and women - to pool resources, access inputs and markets more effectively, and negotiate improved economic terms through collective action. Cooperatives not only enhance incomes but also foster durable institutional capacity at the grassroots level. By supporting cooperative structures, the project ensures that investments in training, enterprise development, and market access generate lasting impact well beyond the project’s duration. In contrast to short-term solutions such as job subsidies, this approach cultivates local leadership, strengthens social cohesion, and promotes resilient, self-sustaining rural economies.

110. **Component B** supports the transition to climate-resilient agro-industrial value chains by prioritizing sustainable agricultural practices and technologies, ensuring scalable, low-carbon growth. These approaches are rooted in the principles of agroecology and focus on soil health, biodiversity and water conservation, safeguarding ecosystems and ensuring that economic gains are not made at the expense of environmental integrity. The alternative to component B, which consists in expanding traditional agriculture, is less costly initially, but leads to long-term environmental degradation, requiring costly restoration efforts.

111. Under **Component C**, the project strengthens institutional coordination and policy frameworks without creating new bureaucratic layers. By reinforcing existing mechanisms, such as the Comité National de Lutte contre les Changements Climatiques (CNLCC), and embedding capacity-building within national institutions, the project ensures that technical knowledge and governance improvements are institutionalized. This approach reduces long-term dependency on external support, while increasing the adaptive capacity of Comorian institutions to sustain project benefits and replicate successful models in other regions. The alternative to Component C, consisting in ad-hoc climate responses, are costly, as disaster relief & emergency funding are much more expensive than proactive adaptation measures.

In addition, the project’s cross-cutting gender and youth empowerment focus yields high social returns by targeting structurally excluded groups. As outlined in paragraph 143, expected benefits include increased economic participation, improved resilience to climate shocks, enhanced food security, and reduced youth unemployment. These socio-economic benefits represent long-term cost savings to the state and communities, justifying the project’s up-front investment through durable, inclusive development impacts.

D. Describe how the project/programme is consistent with national or sub-national sustainable development strategies

72-112. Since 1994, the country has had a national environmental policy, strategy and action plan. The basic principle underlying this policy is the integration of the environmental dimension into the country’s social and economic development, through the rational and sustainable management of natural resources and the redefinition or reinforcement of sectoral policies.

73.—The country has adopted a comprehensive strategic framework for its development, the Growth and Poverty Reduction Strategy (GPRS) for the period 2010-2014, and 2010-2014 and has subscribed to the Millennium Development Goals and to the Sustainable Development Goals, which advocate environmental sustainability to reverse the current trend towards loss of environmental resources.

113. —
74.—The 2030 Agenda for Sustainable Development states that the Sustainable Development Goals (SDGs) are integrated and indivisible and balance the three dimensions of sustainable development (economic, social, and environmental). In Comoros several other strategies, plans and programs, have been developed, such as the National Environmental Policy (1994), which encompasses the various sectoral strategies. ECO-Youth, through its climate change adaptation measures in favour of young agripreneurs, will contribute to the implementation of all the environmental conventions resulting from Rio, and the strategies that flow from them. With regard to the Biodiversity Conservation Strategy (and its Action Plan (2017-2021) ECO-YOUTH will promote the sustainable use of natural resources (Strategic Orientation B of the Biodiversity Conservation Strategy) Strategy), enhance the benefits derived from biological diversity through the

valorisation of NTPF (Strategic Direction D), as well as capacity building (Strategic Direction E). In the marine resources sector, ECO-Youth will promote the implementation of Fish Aggregation Devices for the sustainable exploitation of the ecosystem, as part of the Integrated Coastal Management Program. [With regard to Regarding](#) the Agricultural Strategy, ECO-Youth will invest in building the capacities of the CRDEs in respect of climate resilience, as the CRDEs are at the heart of the Agricultural Strategy.

75. In addition, it will support the rational management of water resources and the combating of land degradation. ECO-Youth is also designed as a project to implement the UNFCCC in Comoros. It contributes directly to the achievement of the NAPA, the NAP and the NDC: Table 3 above presents the main ECO-Youth foreseen contribution to the NDC planned adaptation measures by 2030. [FisheriesFisheries](#)

76. The 3rd National Communication to the UNFCCC provides the priority adaptation activities by sector. The project will use the synthetic below table, in which the main relevant adaptation activities have been clustered by sector (Agriculture, Livestock, Fisheries, Forestry Management, Water)

Table 7: Priority adaptation activities by sector²⁵

Agriculture	Livestock	Fisheries	Forestry management	Water
Limiting sources of pollution	Consolidating use of natural resources	Develop and implement fisheries management plans	Promote the reduction of the use of wood as a source of energy	Build the capacity of SONEDE's supply agents and infrastructure.
Raising awareness and coaching farmers on sustainable farming practices	Promoting a good land tenure management of production areas	Create or revitalise fishing councils at national level	Reinforcing the forestry code	Promoting the expansion of the drinking water distribution network
Exploiting the wealth of our ecosystems	Equipping farmers to adapt to different scenarios	Implementation of a recovery plan for fish stocks	Expand the national network of protected areas;	Ensuring sustainable management of water facilities and distribution network
Moving towards systems that are more resistant to climatic hazards	Raising awareness of climate change and its consequences	Improving conservation methods for fish products	Encouraging agroforestry practices and better water management	Making the water purification procedure more widely available by following the current water master plan
Reduce phytosanitary products	Améliorer la disponibilité de l'eau	Support ANACM in processing and disseminating meteorological information to fishermen and fisheries managers;	Restoring watersheds;	Collecting rainwater and promoting small-scale water schemes
Promote biodiversity;	Improve access to appropriate veterinary services	Implement a programme to rehabilitate and protect fishing-related infrastructure	Adopt ecologically resilient plant species in reforestation projects	Putting integrated water resource management (IWRM) into practice Contributing to the restoration of catchment areas Contributing to the protection of

79. The Water Act n° 94-037, of December 21, 1994, aims to guarantee the sustainable management of water resources in conditions that enable their conservation and protection against all forms of degradation and pollution, on the one hand, and their sustainable use and exploitation to meet the country's various needs and priorities, on the other. The Act defines the scope of application, the fundamental principles, the institutional framework for water resource management, the protection of water resources, in particular against the negative impacts of water pollution, the management of rainwater, the different use of water and the fines and penalties for breaches of the law.

Formatted: Font: Not Bold, English (United States)

80. Law n° 94-018/AF, above-mentioned, defines also the marine environment in articles 31-36. Emphasis is placed on the importance of the marine environment to the economy of the Comoros. The law authorizes the Minister to promulgate regulations concerning fishing, requires environmental authorization for all developments in the marine environment, and prohibits the dumping of any waste in the ocean. All these provisions will be considered as part of the impact assessment studies and the preparation of the ESMP. In addition, ECO-YOUTH, under Component 3 will provide support to the Ministry in charge of the Environment to strengthen the regulatory framework.

84. Law N°23-023/AU amending and supplementing certain provisions of Law N°07-0 11 /AU of August 29, 2007, revised by Law N°19-00S/AU of June 25, 19 revising the Fisheries and Aquaculture Code of the Union of the Comoros,

Formatted: Font: Bold

115. The objective of the project is to support rural youth employment in resilient agricultural value chains. Consequently, the project will target underemployed youth. While national vocational centers engage youth aged between 15-35, in alignment with the country's definition of youth, the project will focus on young men and women aged 18-35 to optimize employment generation. Detailed specifics about the targeted youth population will be elaborated in the Environmental and Social Management Plan (ESMP), ensuring compliance with the Adaptation Fund's Environmental and Social Policy

85. In the event of a legal vacuum, the relevant rules of international law, IFAD rules and the Adaptation Fund's environmental and social policy will apply.

Formatted: English (United States)

					<p>reinforcement measures to cover all the dimensions of adaptation to climate change in agricultural value chains.</p> <p><u>ECO-YOUTH focuses on the recalibration of three CRDEs—one on each island—as reference centers for climate-resilient agricultural value chains, and going beyond production. The project uses CRDEs to provide support to young men and women whose integration in the production and wealth creation processes is limited or non-existent.</u></p> <p><u>In contrast the main aim of the UNDP project is to strengthen CRDE's agricultural extension services by leveraging CRDEs for improving agricultural yields, traditional crop resilience, and institutional capacity building. Their interventions are more sector-focused on enhancing production techniques and building climate-smart farming skills and targeting active farmers. These centers are specifically designed to serve as hubs for cooperative training, entrepreneurship development, and the promotion of youth-led agri-businesses that integrate climate adaptation. The project uses CRDEs to provide support to young men and women whose integration in the production and wealth creation processes is limited or non-existent.</u></p>	
<p>Protecting biodiversity through effective management of the national network of protected areas (GEF) 2022-2027</p>	Mitigation & Adaptation	DGEF (MAPETA)	UNDP	<p>The long-term solution proposed in this project to address the drivers of biodiversity loss and degradation is to improve the effectiveness of the recently established PA system to ensure the preservation and integrity of the ecosystem services on which the country's emergence and the livelihoods of local populations depend. The project will seek to implement this solution through improved concerted planning of land and resource use and ecosystem restoration within PAs,</p>	4,424,479 USD	<p>This project has no direct links with ECO-Youth foreseen activities, since ECO-Youth will not intervene in the Protected Areas. <u>However, this project places particular emphasis on partnerships between private companies and community cooperatives, either directly or through the development or expansion of nature-based value chains, and on strengthening their capacities to ensure the sustainability and profitability of local communities' livelihoods. It will therefore be useful for ECO-YOUTH to learn from this experience at FP design stage to see how to strengthen the consideration of nature-based solutions when targeting climate-resilient value chains and climate adaptation entrepreneurship.</u></p>

Formatted: Font: 8 pt, Not Italic, Font color: Auto

<p>Ensuring a climate-resilient water supply (GCF) 2019-2027</p>	Adaptation	NC	UNDP	<p>The aim of the project is to achieve a national paradigm shift in strengthening the climate resilience of water supply by integrating systematic climate risk reduction approaches into the governance and provision of water resources, watersheds, water supply infrastructure and user management, including planning, investment, design, operation and maintenance.</p>	43,918,808 USD	<p>While the GCF project aims to develop national instruments and tools to promote the integrated management of water resources, and to build very large hydraulic infrastructures, ECO-Youth will only be involved on a small scale in the creation of climate-resilient infrastructures in the agro-sylvo-pastoral and fisheries sectors (Component A, Output A.2.1). Exchanges of information between the two projects on their respective activities will be useful in identifying, as appropriate, the possible contribution of ECO-Youth to strengthening water supplies and increasing the resilience of water supply facilities.</p>
<p>Biodiversity conservation through nature-based solutions, pillars of the blue and green economy in the Union of Comoros (GEF, concept approved) 2025-2032</p>	Adaptation	DGEF (MAPETA)	UNDP	<p>The BGI project addresses the lack of diversification of the Comorian economy and its high dependence on food imports, the unsustainable use of natural resources contributing to the loss of biodiversity and ecosystem services, the poor management of organic waste and the country's vulnerability to climate change. The project aims to transform the tourism, food and urban sectors into pillars of Comoros' blue and green economy through investments in nature-based solutions (NBS) at the landscape and seascape levels. The project seeks to change the way natural capital and NBS are considered in Comoros' legal and fiscal regulations and by public and private sector actors and investors.</p>	10,040,000 USD	<p>This project is in the design phase. During its implementation, it will be useful to discuss the nature-based solutions that this project could develop to combat the unsustainable use of natural resources and the loss of biodiversity and ecosystem services. ECO-Youth could benefit from this experience and in turn test nature-based solutions to support the blue economy as part of the envisaged development of Fish Aggregating Devices (ECO-YOUTH, Sub-Component A2)</p>
<p>Green and Blue Pact (EU) 2024-2029</p>	Adaptation	DGEF (MAPETA)	Expertise France, AFD	<p>The aim of this programme is to strengthen the environmental and food resilience of the Comoros Islands, combat irregular migration to the EU, and promote employment for young people and women, digital technologies, the creation of added value and the development of a circular economy.</p>	14,400,000 Euros	<p>Taking advantage of the fact that the Green and Blue Pact comes under the same Ministry, ECO-Youth will be working with this project to seek synergies and complementarities in the field of green job creation for young people and women.</p>
<p>FORCE Jeunes (IFAD) 2025-2031</p>	Rural development	MAPETA	IFAD	<p>FORCE Jeunes aims to provide vocational training and decent jobs for young people in the Comoros. This will be achieved through vocational training, apprenticeships, the development of business plans for young people to find employment opportunities and, where appropriate, become entrepreneurs (including men, women and people living with disabilities in the project's geographical areas) for rural enterprises in the green and blue economy, agriculture, livestock and fisheries sectors.</p>	USD 24,000,000	<p>The ECO-Youth Project target professional groups of young men and women while FORCE Jeunes, which is not yet implemented, aims at providing jobs to individuals. In this sense no overlapping is anticipated. However, both projects will support the CRDEs. FORCE Jeunes plans to finance the construction of buildings and technical infrastructure for the CRDEs. ECO-Youth will support the development of demonstration perimeters with a view to adapting to climate change: setting up drip irrigation systems, introducing solar energy, etc. In terms of training content, ECO-Youth's support will focus on introducing</p>

climate change adaptation issues into the various training modules: sustainable land management techniques (water and soil conservation techniques), climate-smart agriculture, agroforestry, sustainable management of fisheries resources, conservation and processing of post-harvest products, etc.) The two projects are to be implemented by IFAD, under the supervision of the Ministry in charge of the environment. It is therefore planned that, during the ECO-Youth design phase, the two projects will be analyzed to identify complementarities and synergies, and to see whether it is possible to achieve economies of scale through a strong collaboration between the two projects.)

ECO-YOUTH is designed with a climate adaptation lens, focusing on improving access to decent jobs through climate-resilient entrepreneurship within the agriculture, livestock, and fisheries sectors. The project's main thrust is to empower rural youth and women by integrating climate-smart practices into local value chains. This approach not only seeks to create sustainable employment but also builds community resilience against climate shocks, contributing directly to national adaptation goals.

In contrast, FORCE Jeunes is oriented towards skills development, vocational training, and direct employment opportunities for youth, women, and people with disabilities. Its objective is to rapidly equip young people with technical skills that enhance their employability across multiple sectors, including agriculture, livestock, and fisheries, but without the explicit focus on climate adaptation. The project emphasizes immediate job placement and apprenticeships, aiming to reduce youth unemployment through short-term vocational pathways.

The difference in focus reflects a divergence in strategic priorities:

- ECO-YOUTH is long-term and transformative, aiming to reshape local agricultural practices to

Formatted: Font: 8 pt, Not Italic, Font color: Auto

Formatted: Left, Space Before: 0 pt, After: 0 pt

Formatted: Font: 10 pt

118. **Coordination and Synergy Strategy between ECO-YOUTH and FORCE Jeunes.** Although ECO-YOUTH and IFAD's FORCE Jeunes projects are independently financed and governed, they operate within the same geographical areas and share a common objective of improving youth employment and entrepreneurship in green and blue economy sectors. Recognizing this, ECO-YOUTH will adopt a proactive coordination and synergy strategy to avoid duplication, maximize impact, and foster institutional coherence. This strategy will be built around the following axes:

Formatted: Font: 10 pt, Bold

- **Complementarity of Target Groups and Support Modalities:** while both projects target youth, ECO-YOUTH will focus primarily on strengthening agricultural cooperatives, climate-resilient value chains, and climate adaptation entrepreneurship, while FORCE Jeunes focuses more on vocational training, apprenticeships, and business incubation. A shared targeting framework will be developed in collaboration with local authorities and project implementers to ensure complementary selection of beneficiaries, with ECO-YOUTH prioritizing cooperative-based and climate adaptation-focused entrepreneurs.

Formatted: Font: 10 pt

Formatted: Indent: Left: 0.25", Hanging: 0.25", Space After: 0 pt, Bulleted + Level: 1 + Aligned at: 0.25" + Indent at: 0.5"

- **Joint Mapping and Planning of Interventions:** During the inception phase, a joint geographic and activity mapping exercise will be undertaken to identify specific intervention sites, targeted value chains, and institutional stakeholders covered by each project.

Formatted: Font: 10 pt, Bold

Formatted: Font: 10 pt

- **Institutional Coordination Mechanism:** An inter-project coordination task force will be established under the Ministry of Agriculture, including focal points from both project implementation units. Quarterly coordination meetings will be held to exchange progress updates, share lessons learned, and harmonize communication with beneficiaries and local governments.

Formatted: Font: 10 pt, Bold

Formatted: Font: 10 pt

- **Shared Monitoring, Knowledge Management, and Learning:** where feasible, both projects will align key performance indicators (e.g., number of youth employed, enterprises created, climate-resilient practices adopted) and explore opportunities for joint learning reviews or shared knowledge products on youth employment in the green and blue economy. This will also contribute to a stronger evidence base for national youth policy and employment programming.

Formatted: Font: 10 pt, Bold

Formatted: Font: 10 pt

Formatted: Indent: Left: 0.25", Hanging: 0.25", Space After: 0 pt

- **Communication and Stakeholder Awareness:** A joint communication note will be developed for local communities, government officials, and service providers, clearly outlining the roles, scope, and value added of each project. Awareness campaigns will reinforce that the projects are mutually reinforcing and not competitive, strengthening community buy-in and trust.

Formatted: Indent: Left: 0"

G. If applicable, describe the learning and knowledge management component to capture and disseminate lessons learned.

87-119. To promote systematic learning and dissemination of this knowledge, a Knowledge Management and Communication Strategy, along with an operational implementation plan, will be developed the project's inception, as part of Component 3. The purpose of this strategy is to capitalize on the project's experiences and innovations and fostering knowledge sharing and scaling-up opportunities. The strategy will outline methods to promote the project's results and document its innovative approaches and activities, while also defining how this information will be effectively shared vis-à-vis project beneficiaries and external stakeholders.

88-120. This strategy will rely on the partner youth training institutions established under Components 1 and 2. The learning and knowledge management system will promote the collection, sharing and utilisation of knowledge related to project activities between project components but also at national level.

121. Further details of the project's approach to learning and knowledge management will be provided during the development of the full proposal. This will be informed by additional consultations with key stakeholders and community members in the target localities. The characteristics of the products and the role of information and communication technologies (ICT) in facilitating access to information, data sharing and communication among the stakeholders will be defined during project design, Online platforms, mobile applications or the use of social networks may be considered to facilitate continuous learning and collaboration between the various stakeholders.

89.

H. Describe the consultative process, including the list of stakeholders consulted, undertaken during project preparation, with particular reference to vulnerable groups, including gender considerations, in compliance with the Environmental and Social Policy and Gender Policy of the Adaptation Fund.

H.

122. The mission took place from April 23 to May 4, 2024. The ECO-Youth project concept note is the result of consultations held with national decision-makers, technical and financial partners, as well as local partners and potential beneficiaries.

123. [At national level, the mission held meetings with several technical and financial partners, such as FAO, AFD, as well as IFAD \(with the team of the IFAD Project PREFER\). These partners were consulted to gather information about their own activities and their perspectives on the ECO-Youth project components, ensuring that the project aligns with existing initiatives, that there are no potential overlaps with these projects, and incorporates valuable stakeholder feedback.](#)

124. [MAPETA's Directorate General for the Environment shared the national priorities for sustainable natural resource management and extended an invitation to the mission to participate to the National Adaptation Plan update process workshop. Information from this workshop contributed to enriching the project's concept note.](#)

125. [Additionally, the courtesy visit to the Minister of Agriculture provided an opportunity to discuss the country's constraints and priorities in terms of youth employment and natural resource conservation.](#)

126. Field visits to potential beneficiaries on the two islands of Grande Comore and Anjouan provided an opportunity to discuss their circumstances and aspirations. At Ndzuwani (Anjouan) island the mission met:

1) In this commune of Bandakrouni, located on the mountain of the same name, at an altitude of 800 metres, the mission visited the Gombe site and met with the Neema Gombe Group, composed of 30 members: 16 women/14 men;

2) Village of Mrijou, Mrongouni site: meeting with the Nya Moja women's group, made up of 35 women and one man; Mrijou Market Garden Organization composed of 3 women;

3) NGO Maecha (discussion with the Programme Manager, with one Trainer and 3 students (girls));

4) Meeting with the Mrémami CRDE (meeting with the Manager and three CRDE members).

127. [Specific conversations took place with women's groups, including those engaged in agricultural productions. Due to time constraints, it was not possible to organize focus group discussions, which will be conducted during the full design](#)

Formatted: No bullets or numbering

Formatted: Font: (Default) Calibri, 12 pt, Font color: Text 1, English (United States)

Formatted: Body Text, Indent: Left: 0", First line: 0", Space Before: 0.55 pt, Numbered + Level: 1 + Numbering Style: A, B, C, ... + Start at: 5 + Alignment: Left + Aligned at: 0" + Indent at: 0.25"

phase. However, semi-structured interviews were used to gather opinions, perspectives, analyses of the constraints faced, and proposed solutions.

128. The main findings are related to:

- Gender and Women's Rights: The issue of gender and women's rights is not well understood, highlighting the need for awareness campaigns on gender-specific challenges.
- Water Access: Limited water access remains the most significant constraint, including scarcity, remoteness, labor predominantly performed by women, and the lack of water tanks and water transport facilities.
- Land Accessibility: Challenges in accessing land plots persist due to the absence of road tracks and adequate means of transport.
- Crop Mechanization: The level of crop mechanization is limited, impeding agricultural productivity.
- Soil Conservation: In natural resource management, combating soil erosion is the primary challenge, followed closely by maintaining soil fertility.
- Product Processing: There is a strong need to enhance product processing capacities, including techniques for tomato preservation.
- Agricultural Development: There is high demand for more productive dairy breeds and the promotion of market gardening to encourage conservation practices.
- Women's Group Autonomy: Technical and financial support is needed to strengthen the autonomy of women's groups and ensure their long-term viability.
- Capacity Development: Developing the technical and organizational capacities of group members is essential. Literacy is particularly noted as a critical need for the autonomy and development of these groups.
- Institutional Structuring: Support is required to strengthen the institutional structuring of the groups, enabling them to evolve into associations or cooperatives.

The consultations with stakeholders directly informed the design of the ECO Youth Project by identifying priority constraints and opportunities in rural communities, such as limited water access, low mechanization, weak soil conservation, and insufficient product processing capacities. These insights shaped the project's components and outputs—for example, enhancing climate-resilient assets, promoting climate-smart agriculture, and strengthening institutional support—while integrating cross-cutting needs like gender awareness, literacy, and the autonomy of women's groups. As a result, the project's interventions are closely aligned with the real needs, capacities, and aspirations of the target beneficiaries.

90.—Field visits to potential beneficiaries on the two islands of Grande Comore and Anjouan provided an opportunity to discuss their circumstances and aspirations.—Specific conversations took place with women's groups, including those engaged in agricultural productions.

91.—Discussions and meetings with local communities in Anjouan highlighted key constraints related to water access (cisterns requirements and water transportation), limited crop mechanization, challenging in accessing cultivated fields, the necessity for dairy breeds improvements and the importance of enhancing product processing capacities, including tomato preservation techniques. A visit to the Maecha association's training structure confirmed the existence of infrastructures for the training and integration of young people, including girls. It also helped to identify the nature of young people's training needs, as well as the need for some young people to reskill in job-creating sectors such as processing. In fact, there are several conservation initiatives in the fisheries sector, such as a fish smoking unit in Mohéli.

92.—The Niamouga women's group, which we met in Anjouan, is an example of a spontaneous and successful initiative. Literacy is mentioned as an important need for the group's autonomy and development. They expressed the need for technical and financial support to strengthen their autonomy and make their group viable. These women face difficulties in accessing the plots, in the absence of tracks and means of transport. In terms of natural resource management, the fight against soil erosion is the most significant challenge for soil conservation, along with the issue of soil fertility. There is a strong demand for more productive dairy breeds and for the development of market gardening to promote conservation.

93. At national level, the mission held meetings with several technical and financial partners, such as FAO and AFD. These partners were consulted to gather information about their own activities and their perspectives on the ECO-Youth project components, ensuring that the project aligns with existing initiatives and incorporates valuable stakeholder feedback.

94. MAPETA's Directorate General for the Environment shared the national priorities for sustainable natural resource management and extended an invitation to the mission to participate to the National Adaptation Plan update process workshop. Information from this workshop contributed to enriching the project's concept note. Additionally, the courtesy visit to the Minister of Agriculture provided an opportunity to discuss the country's constraints and priorities in terms of youth employment and natural resource conservation.

129.

I. Provide justification for funding requested, focusing on the full cost of adaptation reasoning.

95-130. The Union of the Comoros is ranked among the world's poorest countries, with a GDP per capita in 2022, and a poverty rate of 45%. The employment rate is only 54% of the population, and over 70% of those in work are poor. The Comoros national budget alone cannot cope with the economic, environmental and social consequences of extreme climatic and meteorological events such as tropical storms, floods, heat waves and droughts, landslides, volcanic eruptions and droughts, which are the main hazards impacting the Union of the Comoros, accentuating the vulnerability of certain ecosystems and groups of already fragile populations.

96-131. **Component 1.** The general observation is that public institutions working in the field of agriculture and fisheries in the Comoros are fragmented, inadequately staffed and poorly managed²⁶. In the institutional landscape of actors in the sector, the Rural Economic Development Centres (CRDE) remain the main provider of advisory services for farmers and agricultural professionals. But the capacity of these institutions, which are essential to the fight against poverty and food security, remains weak in terms of both infrastructure and human resources. Several cooperating partners (France, World Bank, FAO) have undertaken to renovate and make operational 7 out of the 19 CRDEs²⁷. But these important and necessary support measures are still insufficient to enable the CRDEs to make a greater contribution to the development of entrepreneurship and climate resilience, which are among the major challenges facing Comorian agriculture. This project will upgrade 3 CRDEs, one on each island, by financing the necessary infrastructure, building the technical capacity of staff and producing training content in agro-sylvo-pastoral fields that incorporates climate change adaptation issues and is attractive to young people (notably by introducing modern technologies, extending training to include aspects of processing and marketing agricultural products, etc.). ECO-Youth's aim is to turn these 3 CRDEs into reference centres capable of playing the role of incubators, helping the young people trained to develop bankable business plans for sustainable agro-sylvo-pastoral activities.

132. Under **Component 2**, the project will promote agroecology, agroforestry, crop diversification, and the adoption of climate-smart agricultural technologies. It will also support resilient and traditional practices to ensure young farmers have access to essential agricultural inputs (seeds, fertilizers, irrigation tools) and climate-adaptive technologies, such as drought-resistant crops and water-efficient systems. Promoting agricultural greenhouses will be essential for adapting to climate change, as they combine technological innovation, good farming practices, and financial support to enhance food security and strengthen the resilience of rural communities against climate impacts. Additionally, processing agricultural and fisheries products will extend their shelf life and improve consumption. ECO-Youth will support improved access to appropriate processing, storage technologies, and profitable markets to increase added value and improve incomes for young farmers. The project will enhance infrastructure for storage, processing, and transportation to minimize post-harvest losses, particularly during extreme weather events. It will also provide equipment and targeted training in seafood processing techniques—such as drying, smoking, and freezing—to add value to products and create new jobs within the fisheries value chain, with a particular focus on benefiting women.

133. The project will invest in digital literacy and access to technology to enhance entrepreneurial capabilities of the young beneficiaries, and to enable rural cooperatives to be connected to information on markets, weather, prices and agricultural trends. Finally, to improve the profitability of young people's rural businesses and strengthen the climate

Formatted: Not Highlight

Formatted: Font: Bold

²⁶World Bank. 2020. Towards a more united & prosperous Union of Comoros - Systematic Country Diagnostic

²⁷ COMPACT. 2023. Comoros National Pact for Food and Agriculture

resilience of agriculture, ECO-Youth will set up a monitoring and feedback system. It will adjust farming practices according to yield data and climatic conditions, and adapt farm management processes based on profitability indicators and feedback,

97. Comoros has no green financing mechanism for youth employment. ECO-Youth's ambition is to set up a complete, innovative system for creating green jobs in the agro-sylvo-pastoral sector, from training up to 4500 young people to financing business plans compatible with the sustainable management of natural resources. To achieve this, ECO-Youth will work with those involved in training and supporting young people (CRDE, Chamber of Agriculture, incubators and private companies able to take on young people on work-study schemes, etc.) to raise awareness of international environmental standards (ISO standards), and to integrate these aspects into training curricula and the process of drawing up business plans and creating jobs. In support of this orientation, the green financing mechanism to be defined at the project design stage will include climate change adaptation criteria in the analysis grid for business plans submitted for financing.

Component 3. MAPETA lacks the human and technical resources needed to implement, monitor, and evaluate national strategies and action plans relating to climate change or biodiversity. Capacity is also insufficient to ensure the integration of climate change adaptation aspects into sectoral strategies. To this end, ECO-Youth will support the institutional strengthening of the Ministry of Agriculture, Fisheries, and Handicrafts, and the Ministry of Environment in charge of Tourism, to carry out their mission in this field.

134. The economic, social and financial benefits that may result from the implementation of the above activities will be quantified at the design phase. However, we can already point to the following advantages:

- Value of Crops Saved: Increased crop value due to improved storage conditions and better access to production sites, particularly during the rainy season.
- Improved Water Availability: Enhanced crop value resulting from improved water availability on plots, facilitated by mechanical and biological measures that encourage rainwater infiltration and groundwater recharge.
- Resilient Crops: Value of crops preserved through the use of using seeds that are less sensitive to water stress and excess water.
- Reduced Women's Workload: Significant reduction in women's workloads, with time saved from not having to collect fuelwood or fetch drinking water.

135. These activities will be implemented by combining measures aimed at: (i) supporting sustainable intensification on the most fertile land with ecosystem restoration and soil and water conservation on degraded or potentially degraded land; (ii) seek to create resilience in agriculture, fisheries, livestock, through a balance of environmental, social and economic benefits from the use of land, water, forests, fruit trees and marine resources; and (iii) monitor the impact and take into account lessons learned to regularly update community management plans for land and marine natural resources and to monitor and oversee the implementation of these management plans in exploited areas. This will ensure the sustainable realization of benefits.

136. A Cost-benefit analysis of the project will be conducted based on models of agriculture, fisheries and greenhouse production and representative Cooperatives in the three islands covered by the project, as well as environmental benefits. Net additional income will be estimated from the returns on agriculture investments, household operating accounts for production models, and business plans for Cooperatives. Data on these incomes will be extrapolated to the project's focal area. The ultimate goal is to assess the net additional income generated by the project. Benefits will be compared with project costs (with and without project scenarios) using efficiency indicators such as the Net Present Value (NPV), the Internal Rate of Return, the payback period, and the benefit-cost ratio over a 20-year economic lifespan. A sensitivity analysis will be carried out to assess the project's response to variations in costs and benefits, both on a variable-by-variable basis and through scenario analysis (e.g., simultaneous increases/decreases in aggregate benefits/costs and project benefit delays).

J. Describe how the sustainability of the project/programme outcomes has been taken into account when designing the project/programme.

The sustainability of the project has been considered in the design of the various components and will be further explored and clarified during the design phase.

137. **Component 1A1A1.** The project involves the recalibration of 3 CRDEs, the heart of the permanent support system for young entrepreneurs. The aim is to strengthen the technical capacities of the CRDEs, so that they can expand and adapt their training offer to cover all the professional aspects of the agro-sylvo-pastoral sectors, integrate climate change adaptation aspects into their training curricula, and set up an ongoing support mechanism for the process. The other sustainability factor in this component concerns the creation of climate-resilient infrastructures to support young people's entrepreneurial initiatives in the agro-sylvo-pastoral and fisheries sectors, adapted to local conditions and foreseeable climate change. These investments will support the blue economy by setting up fish concentration facilities, and will facilitate production and market access by developing market gardening areas and greenhouses, building post-harvest infrastructures (storage warehouses, ecological cold rooms (CFE), attached to market gardening areas), contributing to the rehabilitation of tracks for transporting produce out of production areas, opening input stores, and so on. The two other sustainability factors in this component are the training of young people in the various trades in the agro-sylvo-pastoral and fishing sectors, and the organisation of young people in the form of rural enterprises (associations, cooperatives, etc.).The project involves the recalibration of 3 CRDEs, the heart of the permanent support system for young entrepreneurs. The aim is to strengthen the technical capacities of the CRDEs, so that they can expand and adapt their training offer to cover all the professional aspects of the agro-sylvo-pastoral sectors, integrate climate change adaptation aspects into their training curricula, and set up an ongoing support mechanism for the process, including support for the development of business plans for young people. The other sustainability factor in this component concerns the creation of climate-resilient infrastructures to support young people's entrepreneurial initiatives in the agro-sylvo-pastoral and fisheries sectors, adapted to local conditions and foreseeable climate change. These investments will support the blue economy by setting up fish concentration facilities, and will facilitate production and market access by developing market gardening areas, building post-harvest infrastructures (storage warehouses, ecological cold rooms (CFE), attached to market gardening areas), contributing to the rehabilitation of tracks for transporting produce out of production areas, opening input stores, and so on.

138. The Adaptation Fund project provides an opportunity to strengthen the capacity of Rural Economic Development Centres (CRDEs) to innovate and be at the forefront of agricultural innovations and capacity building for future generations. The CRDEs' mission encompasses a wide range of thematic areas, from responding to producer demands for advisory support to promoting facilitation tools for production, supply, and service procurement. The CRDE network plays a crucial role in centralizing information for managing and disseminating agricultural strategies defined by the Government of the Union of Comoros.

Formatted: English (United States)

139. Through the CRDEs, this project will pave the way by piloting innovations and demonstrating climate-smart practices and technologies, as well as supporting climate-proofing and greening of agricultural value chains. Furthermore, IFAD and other donor-funded initiatives will offer opportunities to scale tested and proven innovations beyond the ECO-YOUTH targeted areas.

Formatted: English (United States)

140. **Component B.** ECO-Youth will promote not only the green and climate resilient technologies and Climate smart agricultural practices, but also the enhancement of processing of agricultural and fisheries products, which will reinforce the sustainability of the overall production and marketing. The project will be innovative in its design of specific performance monitoring to provide feedback and lessons learned with a view to continually adjusting a cost-effective economic process that is constantly adapted to climate change.

98. Component 2. ECO-Youth will establish a strategic partnership with a long-term structure, the Maison de l'Emploi (MDE), to integrate the project's activity into national job creation policies and strategies, giving priority to young people and women. This partnership will enable trained young people to be placed with agro-SMEs as part of strategic partnerships with employers, the Chamber of Commerce and Industry, and the National Investment Promotion Agency. Job offers in the fisheries, agriculture and livestock sectors will be continuously monitored and disseminated. The Green Finance Mechanism to be created will integrate adaptation to climate change and climate risk into financing mechanisms, and will be designed as a shared-cost mechanism, involving a financial contribution from the beneficiary.

99-141. **Component 3Component C3C3.** The two main factors of sustainability in this component relate, on the one hand, to the integration of project activities into national policies and strategies and, on the other, to the capacity building of key

institutions that support rural youth enterprises. The project is aligned with the PCE 2030 and sectoral policies ([National Agricultural Investment Plan](#), [National Gender Equity and Equality Policy](#), [National Youth Policy Plan](#)–[National d'Investissement Agricole](#), [Politique nationale de l'équité et de l'égalité du Genre](#), [Politique Nationale de la Jeunesse](#), etc.) As such, the project will support the implementation of these policies and strategies, and provide support for the institutional strengthening of the Ministry of Agriculture, Fisheries, ~~Environment~~, ~~Tourism~~ and Handicrafts.

K. Provide an overview of the environmental and social impacts and risks identified as being relevant to the project/programme.

140. The proposed project aims for full alignment with the Environmental and Social Policy (ESP) and the Gender Policy of the Adaptation Fund. The initial screening detailed below addresses the safeguard areas of the ESP, identifying any potential environmental and social risks and impact that proposed project components may pose. The project is classified as a Category B project regarding the environmental, social and climate risks. A Social, Environmental and Climate Assessment Process (SECAP) review note will be elaborated at the design phase and will include a matrix on the environmental and social management plan.

142.

Table 11440: Environmental and social impacts and risks

ESP	Checklist of environmental and social principles	No further assessment required for compliance	Potential impacts and risks - further assessment and management required for compliance
ESP 1	Compliance with the Law	Low/no risk	<p>The Concept Note has been developed to be in compliance with the legal frameworks of the Union of the Comoros. Relevant national, regional and district authorities have been/will continue to be consulted during proposal development to ensure compliance with all relevant laws. The project will comply with all national relevant laws, regulations and technical standards. In the absence of national standards, the project will apply internationally recognized standards.</p>
ESP 2	Access and Equity		<p>Potential risks that could hinder equitable access, include: i) Gender-based barriers: cultural norms and socio-economic constraints may limit women's participation in training and cooperative membership; ii) Youth marginalization: young people, particularly in rural areas, may face obstacles in accessing decision-making spaces or securing equal opportunities in value chain activities; iii) Access disparities: there is a risk that access to climate-smart technologies and resources could be unevenly distributed, favoring those with better connections or stronger economic standing; iv) Elite capture: more influential community members might dominate cooperatives or decision-making processes, limiting the participation of marginalized groups.</p> <p>The project is designed to support equal access to training, equipment, infrastructures, and services, taking especially into account marginalized and vulnerable groups, namely women and youth. It is explicitly indicated through the objective itself of ECO-Youth, which is to target specifically young and women. All the components are built to provide young and women with training and capacity to build business plans their plans their plans rural enterprises on a gender balanced basis, (Component 1), to access funding for developing their own jobs in the agro-sylvo-pastoral fields to new technologies and to develop climate smart agriculture, as both, young men and women, will be equal members in the</p>

			association or cooperative supported by the project (Component 2). Equity will be guaranteed by the very nature of the interventions through the implementation of the 2 Components and the inclusion of criteria favourable to young and women in the <u>grids-of-selection of business plans as well as in the access to the Green Fund designed in Component 2</u> <u>selection2selection2 of young men and women to be trained, as well as in the structuration of the rural enterprises supported by the project</u>
<u>ESP 3</u>	<i>Marginalized and Vulnerable Groups</i>	Low/no risk	<p>Potential risks that could undermine inclusive participation and equitable access to project benefits are: i) Insufficient inclusion during decision-making due to Traditional gender norms and power dynamics which may prevent women and marginalized youth from participating fully in decision-making processes within cooperatives and community groups; ii) Unintended reinforcement of existing inequalities if the project activities are not carefully monitored; iii) Barriers to accessing climate-smart technologies and inputs: Vulnerable groups may face obstacles such as lack of information, limited mobility, or financial constraints, hindering their ability to access project-supported innovations; iv) Limited representation of marginalized voices: the governance structures of cooperatives may lack mechanisms to ensure that marginalized groups are heard and represented. Marginalized and vulnerable groups will be consulted during the proposal development process to ensure that their identified threats, priorities and mitigation measures are reflected, and the adequate mitigation measures will be adopted in the project's ESMP. The project has been designed to empower marginalized and vulnerable groups to make decisions on concrete adaptation actions, valuing their traditional and local knowledge, through the community adaptation planning process. Marginalized and vulnerable groups – especially women – will be consulted during the proposal development process to ensure that their identified threats, priorities and mitigation measures are reflected, while adequate mitigation measures are adopted in the project's ESMP.</p>
<u>ESP 4</u>	<i>Human Rights</i>	XLow/no risk	<p>This project affirms the rights of all individuals and does not violate any pillar of human rights. No activity that could pose a risk of non-compliance with national human rights requirements or with international human rights laws and conventions will be proposed. However, there is a risk that interventions may not sufficiently consider the human rights implications of their activities, which could have unintended negative impacts on vulnerable communities. This will be assessed in more detail during the design phase, and international standards will be taken into account in all subsequent assessments during the project proposal design phase. During project implementation, all relevant actors will be sensitised to international human rights standards. This project affirms the rights of all people and does not violate any pillar of human rights. The project will ensure respect for international and national labour laws and codes, as stated in IFAD's policies.</p>
<u>ESP 5</u>	<i>Gender Equality and Women's Empowerment</i>	Low risk/ moderate risk	<p>The project will fully mainstream gender and will ensure that women and men and female and male youth equitably engage in and benefit from project activities such trainings and capacity building, or income generating activities. A Gender Assessment will</p>

			<p>be conducted during the full proposal development, together with a project's gender mainstreaming strategy as a central element of the exit strategy.</p> <p>During the Gender Assessment as well as during the further design and implementation of the project, women and women's groups will be intensively consulted. The Gender Assessment recommendations will be integrated into the ESMP and will inform project implementation.</p>
ESP 6	Core Labour Rights		<p>Low/moderate risk</p> <p>There is a possible risk of non-compliance with labour safety standards by contractors. The project will fully comply with relevant labour laws guided by the ILO labour standards. The ESMP which will be elaborated during the design phase will refer explicitly to the obligation for the contractors to comply with the requirements relating to the safety of workers in accordance with ILO Convention No. 62 insofar as they are applicable to the project. The Contractors should give priority to hiring labour from the surrounding areas to avoid the need for temporary workers' camps.</p>
ESP 7	Indigenous Peoples	X No risk	<p>No risk</p> <p>There are no recognized indigenous people in Comoros are no indigenous people in the target area</p>
ESP 8	Involuntary Resettlement		<p>Low/no-risk</p> <p>The project is not expected to lead to involuntary resettlement, neither in physical nor economic terms, This will be ensured through careful site selection and land management during implementation. This risk will be further assessed at Fully develop project design stage</p>
ESP 9	Protection of Natural Habitats		<p>Low/no-risk</p> <p>During the full IFAD/AF project design, IFAD will carry out an ESA that will identify and exclude protected areas, ensuring that the project will not directly or indirectly impact negatively protected areas or high value conservation areas, in accordance with AF safeguards. In addition, and according to internal IFAD rules, the ESMP and the ESA will constitute part of the IFAD's Social, Environmental and Climate Assessment Procedures (SECAP)</p>
ESP 10	Conservation of Biological Diversity	X No risk	<p>Low risk</p> <p>No risk</p> <p>The activities of this project will not adversely impact the conservation of biological diversity. During the full IFAD/AF project design IFAD will carry out an ESA that will ensure that the project will not directly or indirectly impact negatively biological diversity, in accordance with the AF safeguards.</p>
ESP 11	Climate Change		<p>Low risk:</p> <p>The entire project is designed to reduce beneficiaries' exposure and vulnerability to the effects of climate change and increase their resilience. The project will not generate any significant emissions of greenhouse gases or reduce carbon sink capacity. There is nevertheless a risk that some investments may fail. They could prove unsuitable, either by failing to generate the expected benefits or by transferring climate change risks and vulnerabilities to other areas. This risk will therefore be monitored at full project design stage when project activities will be finalised.</p>

PART IV: ENDORSEMENT BY GOVERNMENT AND CERTIFICATION BY THE IMPLEMENTING ENTITY

A. Record of endorsement on behalf of the government

Provide the name and position of the government official and indicate date of endorsement. If this is a regional project/programme, list the endorsing officials all the participating countries. The endorsement letter(s) should be attached as an annex to the project/programme proposal. Please attach the endorsement letter(s) with this template; add as many participating governments if a regional project/programme:

(FAWAZ MOHAMED MOUMINI, Focal Point for the Adaptation Fund, Ministry of Environment in charge of Tourism)	Date: (09, 07, 2024)	
---	----------------------	---

B. Implementing Entity certification

Provide the name and signature of the Implementing Entity Coordinator and the date of signature. Provide also the project/programme contact person's name, telephone number and email address

I certify that this proposal has been prepared in accordance with guidelines provided by the Adaptation Fund Board, and prevailing National Development and Adaptation Plans (.....list here.....) and subject to the approval by the Adaptation Fund Board, commit to implementing the project/programme in compliance with the Environmental and Social Policy and the Gender Policy of the Adaptation Fund and on the understanding that the Implementing Entity will be fully (legally and financially) responsible for the implementation of this project/programme.

* Each Party shall designate and communicate to the secretariat the authority that will endorse on behalf of the national government the projects and programmes proposed by the implementing entities.

Subject: Endorsement for "Enhancing Youth Entrepreneurship through Climate Resilient Opportunities - ECO Youth"

In my capacity as designated authority for the Adaptation Fund in the Union of the Comoros I confirm that the above national grant proposal is in accordance with the government's national priorities in implementing adaptation activities to reduce adverse impacts of, and risks, posed by climate change in the Union of the Comoros.

Accordingly, I am pleased to endorse the above grant proposal with support from the Adaptation Fund. The total grant being requested for this project is US\$ 10,000,000.00 (US\$ Ten Million). If approved, the project will be implemented by the International Fund for Agricultural Development (IFAD) and executed by the Ministry of Agriculture, Fisheries and handicrafts.

Yours sincerely,

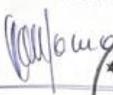

FAWAZ MOHAMMAD MOUMINI

Revised PFG Submission Form¹ (additions in red)
Project Formulation Grant (PFG)

Submission Date: ~~(Month/Date/Year): 09/01/2025~~

Adaptation Fund Project : AF00000403

Country/ies: Comoros

Title of Project/Programme: Enhancing youth entrepreneurship through Climate Resilient Opportunities (ECO-Youth)

Type of IE (NIE/RIE/MIE): MIE

Implementing Entity: International Fund for Agricultural Development (IFAD)

Executing Entity/ies: International Fund for Agricultural Development (IFAD) for the PFG, Ministry of Environment Agriculture for the project

A. Project Preparation Timeframe

Start date of PFG	June 2025 January 2026
Completion date of PFG	May-December 2026

B. Proposed Project Preparation Activities (\$)

List of Proposed Project Preparation Activities	Output of the PFG Activities	US\$ Amount	Budget note ²
Consultancies and contracts to develop program	Full proposal of the Eco-Youth project	77,250	Consultancy fees: USD 64,250 Travel fees: USD 13,000
Detailed Vulnerability Assessment of Targeted Villages Using GIS Mapping and Remote Sensing to Determine Project Sites and Levels of Land Degradation	Vulnerability assessment report including maps	20,000	Consultancy fees: USD 20,000
Gender and Environmental and Social risk analyses and formulation of	Environmental and Social Management Plan and	40,000	Consultancy fees: USD 30,000

¹ As presented in AFB/PPRC.33/40 Annex 1.

² The proposal should include a detailed budget with budget notes indicating the break-down of costs at the activity level. It should also include a budget on the Implementing Entity management fee use.

Formatted: Font: (Default) Aptos, 10 pt, Do not check spelling or grammar

Formatted: Space After: 0 pt

Environmental and Social Management Plan and Gender Action Plan. This document is required as part of the submission of the full proposal.	Gender Action Plan formulated.		Travel costs: USD 10,000
IE Fee (8.5% of total)	-	12,750	-
Total Project Formulation Grant	-	150,000	-

Please describe below each of the PFG activities and provide justifications for their need and for the amount of funding required:

The PFG activities requested for the ECO-Youth project will support the formulation of the full proposal including field visits and stakeholder engagement, ensuring that the Executing Entity will be provided with a complete design package to fast-track implementation. The activities proposed are detailed below:

1. Consultancies and contracts to develop program

IFAD is requesting additional funds to top up the budget it allocates for the design of Adaptation Fund projects. The fund will be used to address the issues the Adaptation Fund raised during the review of the project concept note. IFAD proposes to hire 3 consultants (national and international) to improve the quality of the full proposal. The proposed cost amounts to USD 77,250, covering consultancy fees and travel costs.

2. Detailed Vulnerability Assessment of Targeted Villages Using GIS Mapping and Remote Sensing to Determine Project Sites and Levels of Land Degradation

The Union of the Comoros is a small, fragile island state facing significant environmental and economic challenges, including low growth and high vulnerability to external shocks. Natural disasters and climate change—manifesting as prolonged droughts, declining rainfall, rising annual temperatures, and shifting seasonal patterns—exacerbate environmental degradation, particularly land degradation, which directly threatens food security and community livelihoods.

To address these interlinked challenges, a detailed vulnerability assessment will be conducted to identify fragile ecosystems and guide climate change adaptation efforts. The study will utilize GIS mapping and remote sensing technologies to analyze environmental vulnerabilities across the targeted villages, assess the level of land degradation, and identify priority project sites for intervention. Remote sensing will play a critical role in monitoring land cover changes, detecting areas of significant land degradation, and providing data-driven insights to inform adaptive strategies.

By linking the assessment of land degradation with climate vulnerabilities, the study will ensure a more integrated approach to adaptation planning. Vulnerable areas will be mapped and analyzed to provide evidence-based recommendations for strengthening ecosystem resilience and reducing exposure to environmental shocks.

3. Gender and Environmental and Social risk analyses and formulation of Environmental and Social Management Plan and Gender Action Plan

Formatted: Font: (Default) Aptos, 10 pt, Do not check spelling or grammar

Formatted: Space After: 0 pt

The Adaptation Fund requires a robust and evidence-based gender and environmental and social risk analysis, based on the list of identified sites for project interventions. For the full proposal, IFAD and the Ministry of Environment in charge of Tourism propose to carry out thorough data collection and analysis for gender, marginalized populations, as well as for the assessment of environmental and social risks. The risk analysis will inform the formulation of a robust Environmental and Social Management Plan and Gender Action Plan. IFAD will hire two international consultants for this assignment, a gender specialist and an environmental specialist who will work jointly. The cost of USD 40,000 includes consultancy fees for 15 days as well as fieldwork costs for one week.

For LLA Projects only:

If requesting additional funding for LLA projects to enable devolving decision making to the local level, please specify the activities that would directly serve to enable devolving decision making to the lowest appropriate level and enable local actors to make informed decisions on how adaptation actions are defined, prioritized, designed, and implemented:

Please provide justifications for their need and for the amount of additional funding required:

C. Implementing Entity

IFAD will be the Implementing Entity with fiduciary and technical oversight. While IFAD will also be the Executing Entity for the PFG, the Ministry of Agriculture will be the Executing Entity of the project.

This request has been prepared in accordance with the Adaptation Fund Board’s procedures and meets the Adaptation Fund’s criteria for project identification and formulation
